bonds, investment grade: Bonds represent an obligation to repay a debt, along with interest. Investment grade bonds are considered to have a lower risk of becoming unable to make promised payments to investors, including the initial debt.

derivatives: Financial instruments whose value is linked to one or more rates, indexes, share prices or other values.

efficient portfolio management: A strategy aimed at reducing risk, lowering costs or generating additional capital or income for the Fund through the use of derivatives. These strategies must align with the Funds risk profile.

convertible securities, contingent convertible bonds: Bonds that convert into shares of a company upon a pre-determined event occurring. Contingent convertible bonds generally pay higher interest payments compared to other bonds due to the higher risk.

asset- and mortgage- backed securities: Bonds backed by consumer debt (such as mortgages, credit card and other loan-type debt) and whose income derives from the payments received from the underlying borrowers.

What are the risks and what could I get in return?

Risk Indicator

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets.

We have classified this product as 1 out of 7, which is the lowest risk class. This rates the potential losses from future performance at a very low level, and poor market conditions are very unlikely to impact the capacity to pay you.

Be aware of currency risk. In some circumstances, you may receive payment in a different currency, so that the final return you get may depend on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

Other risks materially relevant to the product not included in the summary risk indicator:

- Credit risk
- Counterparty risk

For a full discussion of all the risks applicable to this Fund, please refer to the "Investment Risk" section of the Fund supplement.

This product does not include any protection from future market performance so you could lose some or all of your investment.

These amounts depend on how much you invest, how long you hold the product and how well the product does.
