RIZE GLOBAL SUSTAINABLE INFRASTRUCTURE UCITS ETF

RIZE

BY ARK INVEST

FUND DESCRIPTION

The RIZE Global Sustainable Infrastructure UCITS ETF ("NFRA") seeks to invest in the foremost companies that potentially stand to benefit from the worldwide effort to support infrastructure development in a way that balances economic, environmental and social objectives. These are companies involved in maintaining and upgrading the existing infrastructure of more industrialised economies, as well as companies developing new infrastructure required for the economic advancement of less industrialised economies. This includes companies involved in the development of the environmental and social infrastructure needed for our transition to a greener, fairer economy.

WHY INVEST IN NFRA?

Favourable Growth Prospects: NFRA is Europe's first global sustainable infrastructure ETF, and provides investors with exposure to companies that are supporting global infrastructure development in a way that balances economic, environmental and social objectives.

Powered by Sustainable Market Strategies®: NFRA is purpose-built in collaboration with Sustainable Market Strategies, an independent ESG intelligence firm based in Montreal, Canada, and leverages their unique insights and proprietary classification system of companies that are contributing to environmental and social objectives of the EU Taxonomy for Sustainable Activities and the UN Sustainable Development Goals in the geographical regions they serve.

Unconstrained Approach: NFRA's composition transcends classic sector, size and geographic classifications by tracking a global theme.

ETF Efficiency: In a single trade, NFRA delivers access to dozens of companies that are favourably positioned to ride the tailwinds of the global sustainable infrastructure theme.

RISK FACTORS

- The Fund may be subject to renewable energy sector risks including, fluctuating energy prices which impact revenues, weather fluctuations that impact electricity generation, the risk that existing supportive regulatory frameworks become less supportive and the cost of producing renewable energy (which pose a risk to the long term economic viability of renewable energy ventures).
- The Fund may be subject to the risks associated with companies developing technologies associated with renewable energy, energy efficiency, electrification of vehicles and transport, water treatment and purification and waste management, recycling and pollution control, including the risk arising from rapidly changing technologies and obsolescence of existing products; fierce competition from competitors with lower costs; aggressive pricing and reduced profit margins; the loss of patent, copyright and trademark protections; cyclical market patterns; evolving industry standards, evolving regulatory frameworks; and frequent new product introductions.
- The Fund may also be subject to emerging market risks including: (i) political and economic risks; (ii) counterparty risk and liquidity risks; (iii) legal risks; (iv) reporting and valuation risks; (v) exchange control and repatriation risks; (vi) settlement risks; and (vii) custody risks.
- Some companies may be smaller and less experienced companies, with limited product lines, markets or financial resources and fewer experienced management or marketing personnel. They may experience extreme price and volume fluctuations that are often unrelated to their operating performance.
- The Index is typically comprised of a mix of micro, small, mid and large capitalisation companies. Micro and small capitalisation companies may be more vulnerable to adverse business or economic events than larger, more established companies and may underperform other segments of the market or the equity market as a whole. Securities of micro and small capitalisation companies generally trade in lower volumes, are less liquid and are often more vulnerable to market volatility and greater and more unpredictable price changes than larger capitalisation stocks or the stock market as a whole.
- Other: (1) Third party service providers (such as the ICAV's depository) may go bankrupt and fail to pay money due to the Fund or return property belonging to the Fund. (2) If the Index provider stops calculating the Index or if the Fund's license to replicate the Index is terminated, the Fund may have to be closed. (3) It may not always be possible to buy and sell the Fund's Shares on a stock exchange or at prices closely reflecting the Net Asset Value. (4) There is no capital guarantee or protection on the value of the Fund and investors can lose all the capital invested in the Fund. (5) Please refer to the "Risk Factors" section of the ICAV's Prospectus and the Fund Supplement.
