Information

BNP Paribas Easy (the "Company") is an open-ended investment company (*Société d'Investissement à Capital Variable* - SICAV). The Company was created as a common fund (*Fonds Commun de Placement* - abbreviated to FCP) bearing the name "EasyETF FTSE EPRA Eurozone", under the Luxembourg Law on 7 July 2004 and for an indefinite period. It changed its name into "FTSE EPRA Eurozone THEAM Easy UCITS ETF" on 8 August 2014.

On 28 December 2015, the Company was converted from the legal form of a common fund into the legal form of an open-ended investment company, and changed its name into "BNP Paribas Easy". A notice was published in the *Mémorial, Recueil Spécial des Sociétés et Associations (the "Mémorial")*.

The latest version of the Articles of Association has been filed with the Trade and Companies Registrar of Luxembourg, where any interested party may consult it and obtain a copy.

The Company is currently governed by the provisions of Part I of the Law of 17 December 2010, as amended, governing Undertakings for Collective Investment, as well as by Directive 2009/65 as amended by the Directive 2014/91.

The Company's capital is expressed in euros ("EUR") and is at all times equal to the total net assets of the various sub-funds. It is represented by fully paid-up shares issued without a designated par value. The capital varies automatically without the notification and specific recording measures required for increases and decreases in the capital of limited companies. Its minimum capital is defined by the Law.

The Company is registered in the Luxembourg Trade Register under the number B 202 012.

Information to the Shareholders

The Articles of Association, the Prospectus, the KIDs and periodic reports may be consulted at the Company's registered office and at the establishments responsible for the Company's financial service. Copies of the Articles of Association and the annual and interim reports are available on request.

Except for the newspaper publications required by Law, the official media to obtain any notice to shareholders will be our website www.bnpparibas-am.com.

Documents and information are also available on the website: www.bnpparibas-am.com.

The annual report is made public within four months of the end of the financial year and the interim report within two months of the end of the half-year.

As to net asset values and dividends, the Company publishes the legally required information in the Grand Duchy of Luxembourg and in all other countries where the shares are publicly offered.

This information is also available on the website: www.bnpparibas-am.com.

Net asset values are calculated every full bank business day in Luxembourg and if the benchmark index is published. The last Business day of the year will be a Valuation Day.

Manager's report

Economic context

In 2025, global economic growth defied the very pessimistic forecasts made after Donald Trump's Liberation Day announcements on reciprocal tariffs. Despite many uncertainties arising from the (often unpredictable and imprecise) announcements on US trade policy, the impact of tariffs on growth turned out to be more modest than expected. However, in its Economic Outlook published in December, the OECD Organisation for Economic Co-operation and Development ("OECD") mentions "resilient growth but with increasing fragilities" and underlines that there is a "sharp decrease in the value of US imported goods subject to tariffs compared to non-tariffed goods. This suggests that tariffs are affecting demand, and will continue to weigh on trade volumes as announced tariffs come into full effect." Throughout the year, technology investments were much more dynamic than envisaged and supported activity. In the autumn, major international institutions and private-sector economists revised their forecasts for 2025 upwards while maintaining solid growth for 2026. In large developed economies (with the notable exception of Japan, which is in a cycle of key interest rate hikes), central banks have brought monetary policy close to neutrality, allowing them to announce in December, more or less explicitly, that the easing cycle has been completed. The US Federal Reserve remains apart, since after keeping its key rates unchanged until September, it relaxed its monetary policy.

United States

GDP growth in the first quarter (-0.6% annualised) was severely penalised by the external contribution and supported by stock building. These two phenomena are linked and reflect the surge in imports of goods before the entry into force of tariffs. Private consumption was modest in the first quarter (+0.6% annualised) and only saw a limited acceleration in the second quarter (+2.5%), while GDP grew by 3.8%. Household confidence has fallen sharply, reflecting consumer expectations about economic policy uncertainties and concerns about employment and inflation. The first part of 2025 was marked by an increase in household inflationary expectations, while core inflation (measured by the core PCE - personal consumption expenditure deflator excluding food and energy) stood at 3.0% at the end of 2024. The subsequent slowdown in inflation allowed inflationary expectations to come down. The monthly rate of job creation in the private sector almost halved between the first six months of the year (79 000 per month) and the second six months (43 000), but the unemployment rate rose from 4.2% on average in the first half to 4.4% in December despite the fall in federal employment. Over the last few months, the labour market has experienced an unusual balance: "few hires - few layoffs". An analysis of the US economic situation in the third and fourth quarters was hindered by the lack of leading economic data due to the six weeks of shutdown (1 October-12 November). This paralysis of certain federal activities was the result of a disagreement in Congress on the economic policy of the Trump administration. We therefore had to wait until 23 December for the third-quarter GDP growth estimate (+4.3% annualised). Political pressure on the Federal Reserve has not wavered, raising fears about the Fed's possible loss of independence.

Europe

After an exceptional increase in the first quarter (+0.6%) when exports to the United States were anticipated, GDP growth surprised on the upside in the second and third quarters (+0.1% and +0.3%), but growth in domestic demand - particularly household consumption - remained modest. The results of the activity surveys suggest GDP growth of 0.3% in the fourth quarter. These results led the European Central Bank ("ECB") to revise its GDP growth forecasts upwards over the entire projection period and to post solid progress: 1.4% in 2025, 1.2% in 2026, 1.4% in 2027 and 2028. Christine Lagarde did not reduce uncertainties, especially those related to geopolitical tensions, but noted the robustness of the labour market and stressed that, "planned defence and infrastructure spending, together with productivity-enhancing reforms, may drive up growth by more than expected." Core inflation (excluding food and energy) slowed from 2.7% at the end of 2024 to 2.3% at the end of 2025, while overall inflation ended the year at 2.0%, the ECB's target. Commodity price inflation (excluding food and energy) remained low, and service inflation, which stood at 4.0% at the end of 2024 and remained high until the spring, eventually slowed to 3.4% at the end of 2025. This disinflation allowed the ECB to continue easing its monetary policy in the first half of the year.

Manager's report

Japan

The first half of the year was marked by an improvement in the economic situation. Year-on-year GDP growth reached 2.0% in the second quarter, the highest level since the end of 2021. In the third quarter, GDP contracted (-0.6% compared to the previous quarter) due to a decline in public and private investment. However, activity surveys have remained encouraging. While it averaged nearly 51 in the first half of the year, the composite PMI (Purchasing Managers' Index) moved between 51 and 52 from July to December. Companies reported an improvement in orders and an increase in hiring. As in the Bank of Japan's quarterly survey, in this PMI survey results were much better in the non-manufacturing sector than in the manufacturing sector in 2025. Such an outperformance may be the result of a jump in the face of US trade policy (or, on the contrary, a wait-and-see attitude on the manufacturing side). Large manufacturing companies are cautious in forecasting profits, particularly in the automotive sector, affected by increases in tariffs in the United States. On the political front, even though Sanae Takaichi's election as Prime Minister only took place in October and surprised observers, this change in leadership caught investors' attention. The prospect of expansionary fiscal measures bolstered equity markets but worried bond investors. In her inaugural speech before parliament, Sanae Takaichi indicated that her approach to fiscal policy would be less “dogmatic” regarding the commitment to ensuring primary budget surpluses, given her intention to adopt a longer-term view of public finance management.

Emerging markets

In China, year-on-year GDP growth stood at 5.4% in the first quarter, unchanged from the fourth quarter of 2024, then gradually slowed to 5.2% in the second quarter and 4.8% in the third quarter. This disappointing result is corroborated by monthly consumption data. Year-on-year growth in retail sales fell to 1.3% in November, the lowest level since the end of 2022. Domestic demand is suffering from the difficulties in the real estate sector, while industrial production has been supported by the buoyancy of external demand. In November, inflation reached an almost three-year high at 0.7% year-on-year due to a sharp rise in fresh food prices. Core inflation (excluding food and energy) is stable at 1.2%, its highest level since February 2024. Production prices continued to fall, but at a slightly slower pace (-2.2% year-on-year in November compared with -3.6% in June). At the end of 2025, the main committees for establishing economic policy (“Politburo and CEWC - Central Economic Work Conference”) confirmed the establishment of a “proactive” fiscal policy and a “moderately loose” monetary policy spurring “high-quality development”. Countercyclical adjustments are expected to be stepped up to support the economy. According to these committees, the economic policy approach must focus on efficiency and reforms rather than general measures.

For emerging economies outside China, the PMI reached its highest point of the year in the manufacturing sector in March. This improvement reflects the dynamic activity at the beginning of the year to accelerate exports to the United States before the introduction of tariffs. The subsequent slowdown in activity remained limited, as exporting countries specialising in technology products continued to enjoy strong demand. In addition, the services sector delivered a dynamic performance throughout the year, with an acceleration observed in the second half of the year. Regular cuts in key interest rates have been a supportive element for many economies.

Manager's report

Monetary policy

After lowering its key interest rate by 100 bp to bring the target rate for federal funds into the range of 4.25%-4.50% at the end of 2024, the US Federal Reserve ("Fed") did not change its monetary policy until September 2025. Beginning with a positive diagnosis on the health of the economy, in July Jerome Powell was confronted with initial disagreement, with two members of the FOMC ("Federal Open Market Committee") voting for an immediate decrease of 25 bp. Despite calls from the White House for rapid cuts in key interest rates, the Fed Chair judged in July that it was prudent to wait. His analysis changed radically over the summer: On 22 August at Jackson Hole, he deemed that the downside risks to employment had increased, paving the way for a key rate cut. On 17 September, the Fed lowered the federal funds target by 25 bp. Only Stephen Miran-newly appointed to the FOMC-voted for a 50-bp reduction, but the committee appeared to be very divided on the appropriate rate level by the end of the year. In the fourth quarter, the Fed made two further cuts of 25 bp, bringing the target rate for federal funds to the range of 3.50%–3.75% on 10 December. None of these decisions was taken unanimously, reflecting a division rarely seen at such a level within the FOMC. The dividing line runs between members who are concerned about the employment situation and those who are focused on persistently high inflation. Moreover, from 1 October, debates were held in an unusual context where the shutdown of certain federal activities prevented the publication of many economic indicators. The shutdown lasted six weeks but the delays persisted. When eventually published, the data on growth (above expectations) and inflation (slowing) presented a rather favourable picture but remains distorted by the specific conditions under which it was collected. By stating that the economy did not appear to be overheated, and to the extent that inflationary risk does not seem to worry the Fed, Jerome Powell confirmed that the labour market should remain the central element of monetary policy while the key rate is now within "a broad range of estimates of its neutral value".

The ECB reduced its three key rates by 25 bp four times in the first half of the year, a policy stance underpinned by the steady slowdown in inflation (from 2.5% in January to 2.0% in June). However, the tone became less accommodating in summer 2025. At the time of the June cut, the ECB considered its monetary policy to be in a "good position" to deal with possible shocks. Keeping the deposit rate at 2.00% in July came as no surprise, but the predominant assumption before the press conference was that easing would resume in September. It did not: Christine Lagarde, followed by other governors, chose to focus instead on the eurozone economy's resilience in the face of trade-related uncertainties. While some governors remain alert to the risk of inflation sustainably falling below the target, it is rather a cautious approach that seems to dominate in the Council and that was affirmed in December. The upward revisions in growth and inflation compared to September and the overall tone of the press conference suggested keeping key rates at their current levels, except in the event of unexpected developments. The forecasts indicate underlying inflation at 2.2% in 2026 (compared to 1.9% according to the September forecast) and 1.9% and 2.0% in 2027 and 2028. This significant change is linked to a less rapid slowdown in inflation in the service sector. Such an assumption effectively removes the risk of a sustained and marked 2% inflation shift that would have justified further monetary easing.

Foreign exchange markets

In mid-January the DXY dollar index (measured against a basket of the euro, yen, pound sterling, Canadian dollar, Swedish krona and Swiss franc), bolstered by the strong growth of the US economy, reached its highest level since November 2022. This movement reversed when many investors considered the depreciation of the dollar to be part of Donald Trump's strategy. Reactions to the 2 April tariff announcements were spectacular in the foreign exchange market. From January to April, the DXY index lost 9.5% before experiencing changes of a smaller amplitude until the end of 2025. The various agreements convinced observers that the risk of a trade war was receding and that the defiance of the dollar was, therefore, less justified. Monetary policy expectations then once again became the main factor explaining the developments in the US dollar. After losing 3.9% and 7.0% in the first and second quarters, the dollar index recorded modest increases in the third and fourth quarters (+0.9% and then +0.6%). In one year, the dollar lost 9.4%, its worst performance since 2017. Fluctuations in the EUR/USD exchange rate (1.0354 at the end of 2024) largely reflect "dollar movements", so the main trends are the same as those of the DXY index. In the spring, after the German elections and the statements by the new Chancellor, the euro was boosted by the prospect of massive budgetary spending to ensure defence sovereignty. The EUR/USD exchange rate rose to around 1.18 before plummeting at the end of July on the occasion of the trade agreement between the United States and the European Union, which was deemed, initially, to be unbalanced. Following this, the exchange rate hovered without direction around 1.16: The dollar was weakened by expectations of a cut in US key rates and the euro was supported by the prospect of the end of the ECB's monetary policy easing cycle. The EUR/USD exchange rate ended the period at 1.1746 (+13.4% in 12 months).

The USD/JPY exchange rate experienced sharp quarterly changes (-4.6%; -4.0%; +2.7%; +6.0%), which resulted in stable performance over 12 months (-0.3% to 156.71). The Bank of Japan ("BoJ") increased its key rate by 25 bp on 24 January to 0.50%. The yen was buoyed by expectations of ongoing tightening on a fairly close horizon. Moreover, in the face of the turbulence that shook the financial markets in the spring, the yen was bolstered by its safe-haven status and the decline of the dollar. The USD/JPY exchange rate briefly dipped below 140 on 22 April, its lowest level since mid-September 2024. The return to a certain calm on the trade front and declining expectations of a rise in the BoJ's key rates subsequently weakened the yen. The exchange rate climbing to above 154 at the end of October led to initial statements by Japanese officials on the development of the foreign exchange market, which did not prevent the exchange rate from moving towards 158, close to its highest levels of the year established in January. The decline in the yen was exacerbated by geopolitical tensions between Japan and China and tensions over Japanese bond yields (+97 bp in 12 months on the 10-year rate). On 19 December, the BoJ increased its key rate to 0.75% (highest since 1995).

Bond markets

The yield of the 10-year T-note (4.57% at the end of 2024) reached 4.80% on 14 January, which will be the high point of the year. Subsequently, data deemed reassuring on inflation, new statements by Fed members, several indicators of declining activity and the many uncertainties about the Trump administration's economic policy led to interest-rate easing. Like other asset classes, the 10-year T-note yield was very sensitive to developments around trade policy. Throughout the curve, yields experienced violent changes over very short periods in the wake of Donald Trump's announcements on reciprocal tariffs on 2 April. Relative calm then followed, although still disrupted by concerns over the sustainability of US debt (downgrading of US sovereign rating by Moody's on 16 May). The 10-year T-note yield, which had dipped to 4.00% in early April, subsequently rose to 4.60% in May before entering a sharp downward trend, driven by adjustments in expectations for key rate cuts and discussions around the "One Big Beautiful Bill Act" budget law, enacted on 4 July. However, the auctions remained well absorbed, easing fears that investors might turn away from the US Treasury market. The 10-year T-note yield was down for much of the third quarter of 2025, mainly due to disappointments regarding job creation in July and August. It ended at 4.15% at the end of September and then fluctuated around 4.10% until the end of the year in the context of the shutdown (freeze of non-essential federal services activities from 1 October to 12 November), which delayed or prevented the publication of many leading economic indicators (inflation, unemployment rate, growth etc.). The 10-year T-note yield ended the period at 4.17%, easing 40 bp in 12 months. The long part of the curve underperformed (+6 bp for the 30-year rate to 4.84%), with investors worrying about threats to Fed independence and the trajectory of public finances. As a result of the three 25-bp cuts in key interest rates from September onwards, the short portion outperformed (-77 bp to 3.47% for the 2-year rate). The difference between the 30-year rate and the 2-year rate grew from 54 bp at the end of 2024 to 137 bp a year later. In 2025, the US Treasuries market recorded a total performance of 6.2%.

The yield of the German 10-year Bund (2.37% at end-2024) began to stretch in early 2025 in the wake of long American rates. In the first half of 2025, the most significant movement was observed on 5 March when the future German Chancellor presented a "fiscal bazooka" providing for infrastructure and defence spending allowed by the reform of the "debt brake". At the same time, European leaders endorsed a targeted plan on defence investments. Expectations of stronger growth and larger bond offerings in the coming years explain the behaviour and underperformance of government bonds relative to the US market. Eurozone bond markets, of course, did not escape the restlessness that seized all asset classes at the beginning of the second quarter. The German 10-year rate, which had reached 2.90% in March, dropped sharply to below 2.50% in April (concerns about growth; flight to security in the face of stock market turbulence). It then fluctuated without real direction between 2.50% and 2.80% before entering a virtually uninterrupted upward trend from October, which brought it to 2.90% in December. Several factors explain this performance. Economic indicators have revealed higher-than-expected growth in the eurozone, and expectations of further monetary easing (paused since the cut of 5 June) have gradually declined, with the last meeting of the year for the Governing Council in December leaving the impression that the easing cycle was complete. The German 10-year Bund yield ended 2025 at 2.86% (+49 bp). The German 2-year rate (2.08% at the end of 2024) benefited from the ECB's four key rate cuts in the first half of the year. It fell below 1.70% in spring 2025 and ended the year at 2.12% (+4 bp). The overall annual performance of German government bonds was negative (-1.4%), while the outperformance of the Italian, Spanish, Portuguese and, more modestly, French markets has allowed eurozone government bonds to post a positive overall performance (+0.6%). The French OAT market was affected by laborious budget discussions in a divided National Assembly that led to the downgrading of the sovereign rating in the autumn. At the end of 2025, French and Italian 10-year rates stood at 3.56% (+37 bp in 12 months) and 3.55% (+3 bp), respectively.

Manager's report

Equity markets

The year started with a few hesitations in a context of tensions over long rates and the emergence of a new Chinese Artificial Intelligence ("AI") model, which shook the major American players in the sector. These variations seem minor compared to the stock market's reaction to US trade policy. On 2 April, President Trump announced "reciprocal" tariffs on all goods imported into the United States at rates far higher than previously anticipated. Global equities then plunged, losing more than 10% between the end of March and 8 April as implied volatility reached its highest levels since the financial turmoil triggered by the 2020 pandemic. On 9 April, the announcement of a 90-day tariff pause brought an end to this phase of extreme nervousness. Then, as negotiations progressed (including a trade truce with China), relief took over. Despite the twists and turns and the unstable situation, investors chose to focus on the positive aspects, namely the easing of trade tensions. After losing 1.7% in the first quarter, global equities (MSCI AC World Index in dollars) ended the second quarter up 11%.

However, the feeling of nervousness has not disappeared, as illustrated by the sharp fall in equities after the US employment report, published on 1 August, which led investors to worry about the risk of recession. Thanks to good business performance and other stronger economic indicators, these concerns have faded despite persistent doubts about employment. This relief allowed risky assets to benefit from Jerome Powell's speech at Jackson Hole in late August, which paved the way for a cut in US Federal Reserve ("Fed") key rates in September. In this buoyant context, concerns at the end of the third quarter about the risk of fiscal paralysis in the US (shutdown) and the announcements of further tariff increases in certain product categories did not prevent global equities from rising 7.3% in the third quarter. Their 3.0% increase in the fourth quarter only partially reflects investors' restlessness at the end of the year, which drove an ounce of gold (+64.6% in 2025) above USD 4 500 in December. However, each episode of falling equities was followed by their rapid rise to new heights when investors found reasons to reassure themselves, both on the trade front and on other issues (difficulties of two US regional banks; disappointments on the results of certain tech stocks in November). The valuations of several tech stocks raised questions, but the economic reality of AI-related investments seemed strong enough to push back fears of a "bubble".

The MSCI AC World Index in dollars climbed 20.6% in 12 months. Emerging markets grew 30.6% (MSCI Emerging Markets Index in dollars), taking advantage of less tense valuations than elsewhere, particularly on tech stocks in large indices. Chinese equities posted an annual increase of 28.1%. The MSCI AC Asia ex Japan Index rose by 29.7%, with strong performances in Singapore and Taiwan due to semiconductors offsetting the much smaller rise in Indian equities. The S&P 500 index gained 16.4%, the Nasdaq Composite index 20.4% and the Magnificent 7 index 24.6%. The EURO STOXX 50 index edged up 18.3% and the MSCI EMU 20.8% with significant disparities between major markets (+56.5% for MSCI Spain, +32.2% in Italy, +17.9% in Germany and +10.3% in France). Japanese equities were supported by the prospect of a dynamic fiscal stimulus following the appointment of the new prime minister in October. The Nikkei 225 jumped 26.2% in 12 months. Following sharp quarterly variations due to tech stocks, the Growth investment style (+21.6% for the MSCI AC Growth index) outperformed Value (+19.3% for the MSCI AC Value index), which benefited from the surge in banks, particularly in Europe. Performances are in indices' local currencies, without reinvesting dividends.

Independent auditor's report

To the Shareholders of
BNP Paribas Easy
60, Avenue J.F. Kennedy
L-1855 Luxembourg
Grand Duchy of Luxembourg

Report on the audit of the financial statements

Opinion

We have audited the financial statements of BNP Paribas Easy (the "Fund") and of each of its sub-funds, which comprise the statement of net assets and the securities portfolio as at 31 December 2025, and the statement of operations and changes in net assets for the year then ended, and the notes to the financial statements, including a summary of significant accounting policies.

In our opinion, the accompanying financial statements give a true and fair view of the financial position of the Fund and of each of its sub-funds as at 31 December 2025, and of the results of their operations and changes in their net assets for the year then ended in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of the financial statements.

Basis for opinion

We conducted our audit in accordance with EU Regulation N° 537/2014, the Law of 23 July 2016 on the audit profession (the "Law of 23 July 2016") and with International Standards on Auditing ("ISAs") as adopted for Luxembourg by the "Commission de Surveillance du Secteur Financier" ("CSSF"). Our responsibilities under the EU Regulation N° 537/2014, the Law of 23 July 2016 and ISAs as adopted for Luxembourg by the CSSF are further described in the "Responsibilities of the "réviseur d'entreprises agréé" for the audit of the financial statements" section of our report. We are also independent of the Fund in accordance with the International Code of Ethics for Professional Accountants, including International Independence Standards, issued by the International Ethics Standards Board for Accountants ("IESBA Code") as adopted for Luxembourg by the CSSF together with the ethical requirements that are relevant to our audit of the financial statements, and have fulfilled our other ethical responsibilities under those ethical requirements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Key audit matters

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the financial statements of the current period. We have determined that there are no key audit matters to communicate in our report.

Other information

The Board of Directors of the Fund is responsible for the other information. The other information comprises Key figures relating to the last 3 years and Unaudited Appendix, but does not include the financial statements and our report of the "réviseur d'entreprises agréé" thereon.

Our opinion on the financial statements does not cover the other information and we do not express any form of assurance conclusion thereon.

A member firm of Ernst & Young Global Limited

In connection with our audit of the financial statements, our responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit or otherwise appears to be materially misstated. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report this fact. We have nothing to report in this regard.

Responsibilities of the Board of Directors of the Fund for the financial statements

The Board of Directors of the Fund is responsible for the preparation and fair presentation of the financial statements in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of the financial statements, and for such internal control as the Board of Directors of the Fund determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the Board of Directors of the Fund is responsible for assessing the Fund's and each of its sub-funds ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the Board of Directors either intends to liquidate the Fund or any of its sub-funds or to cease operations, or has no realistic alternative but to do so.

Responsibilities of the "réviseur d'entreprises agréé" for the audit of the financial statements

The objectives of our audit are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue a report of the "réviseur d'entreprises agréé" that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with EU Regulation N° 537/2014, the Law of 23 July 2016 and with the ISAs as adopted for Luxembourg by the CSSF will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As part of an audit in accordance with EU Regulation N° 537/2014, the Law of 23 July 2016 and with ISAs as adopted for Luxembourg by the CSSF, we exercise professional judgment and maintain professional skepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Fund's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the Board of Directors of the Fund.
- Conclude on the appropriateness of the Board of Directors of the Fund's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Fund's or any of its sub-funds ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our report of the "réviseur d'entreprises agréé" to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our report of the "réviseur d'entreprises agréé". However, future events or conditions may cause the Fund or any of its sub-funds (except for the sub-fund(s) where a decision or an intention to close exists) to cease to continue as a going concern.

A member firm of Ernst & Young Global Limited

- In respect of sub-funds where a decision or an intention to close exists, we conclude on the appropriateness of the Board of Directors of the Fund's use of the non-going concern basis of accounting. We also evaluate the adequacy of the disclosures describing the non-going concern basis of accounting and reasons for its use. Our conclusions are based on the audit evidence obtained up to the date of our report of the "réviseur d'entreprises agréé".
- Evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide those charged with governance with a statement that we have complied with relevant ethical requirements regarding independence, and communicate to them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, actions taken to eliminate threats or safeguards applied.

From the matters communicated with those charged with governance, we determine those matters that were of most significance in the audit of the financial statements of the current period and are therefore the key audit matters. We describe these matters in our report unless law or regulation precludes public disclosure about the matter.

Report on other legal and regulatory requirements

We have been appointed as "réviseur d'entreprises agréé" by the General Meeting of the Shareholders on 30 December 2024 and the duration of our uninterrupted engagement, including previous renewals and reappointments, is 1 year.

We confirm that the prohibited non-audit services referred to in EU Regulation No 537/2014 were not provided and that we remained independent of the Fund in conducting the audit.

The non-audit services provided to the Fund for the year ended 31 December 2025 are disclosed herebelow:

- Separate report in relation to CSSF Circular 21/790
- Review under ISRE2410 of quarterly financial information

Notes to the financial statements

Note 1 - General Information

Events that occurred during the financial year ended 31 December 2025

Since 1 January 2025, the Company has decided the following changes:

a) Launched, renamed and liquidated sub-funds

Sub-fund	Date	Event
FTSE EPRA/NAREIT Developed Europe	30 January 2025	Liquidation of the sub-fund
MSCI China ESG Filtered Min TE	13 March 2025	Sub-fund renamed “MSCI China Min TE”
MSCI Emerging ESG Filtered Min TE	13 March 2025	Sub-fund renamed “MSCI Emerging Min TE”
MSCI Emerging SRI S-Series PAB 5% Capped	13 March 2025	Sub-fund renamed “MSCI Emerging SRI PAB”
MSCI EMU ESG Filtered Min TE	13 March 2025	Sub-fund renamed “MSCI EMU Min TE”
MSCI EMU SRI S-Series PAB 5% Capped	13 March 2025	Sub-fund renamed “MSCI EMU SRI PAB”
MSCI Europe ESG Filtered Min TE	13 March 2025	Sub-fund renamed “MSCI Europe Min TE”
MSCI Europe Small Caps SRI S-Series PAB 5% Capped	13 March 2025	Sub-fund renamed “MSCI Europe Small Caps SRI PAB”
MSCI Europe SRI S-Series PAB 5% Capped	13 March 2025	Sub-fund renamed “MSCI Europe SRI PAB”
MSCI Japan ESG Filtered Min TE	13 March 2025	Sub-fund renamed “MSCI Japan Min TE”
MSCI Japan SRI S-Series PAB 5% Capped	13 March 2025	Sub-fund renamed “MSCI Japan SRI PAB”
MSCI Pacific ex Japan ESG Filtered Min TE	13 March 2025	Sub-fund renamed “MSCI Pacific ex Japan Min TE”
MSCI USA ESG Filtered Min TE	13 March 2025	Sub-fund renamed “MSCI USA Min TE”
MSCI USA SRI S-Series PAB 5% Capped	13 March 2025	Sub-fund renamed “MSCI USA SRI PAB”
MSCI World SRI S-Series PAB 5% Capped	13 March 2025	Sub-fund renamed “MSCI World SRI PAB”

Global Aggregate Bond SRI Fossil Free (launched on 17 October 2025)	Activation of the share class “UCITS ETF EUR - Capitalisation”	17 December 2025
ESG Enhanced EUR Corp Bond December 2029 ((formerly Sustainable EUR Corporate Bond December 2029) (formerly ESG Enhanced EUR Corporate Bond December 2029))	Liquidation of the share class “Privilege - Distribution”	19 December 2025

Note 2 - Principal accounting methods

a) Presentation of the financial statements

The financial statements of the Company are presented in accordance with the legislation in force in Luxembourg governing undertakings for collective investment. The currency of the Company is the euro (EUR).

BNP Paribas Easy’s (combined) financial statements are expressed in EUR by converting the financial statements of the sub-funds denominated in currencies other than EUR at the exchange rate prevailing at the end of the financial year.

The statement of operations and changes in net assets covers the financial year from 1 January 2025 to 31 December 2025.

The financial statements are prepared and presented in accordance with generally accepted accounting principles in Luxembourg for investment funds on a going concern basis with the exception of ESG Eurozone Biodiversity Leaders PAB and ESG Enhanced Corp Bond December 2027 which has been prepared on a non-going concern basis with the assets being at net realisable values and liabilities at estimated settlement amounts, as it liquidated after the year end.

b) Net asset value

This annual report is prepared on the last net asset value as at 31 December 2025.

c) Valuation of the securities portfolio

The value of shares or units in undertakings for collective investment shall be determined on the basis of the last net asset value available on the Valuation Day. If this price is not a true reflection, the valuation shall be based on the probable sale price estimated by the Board of Directors in a prudent and bona fide manner.

The valuation of all securities listed on a stock exchange or any other regulated market which functions regularly, is recognised and accessible to the public, is based on the last known closing price on the Valuation Day, and, if the securities concerned are traded on several markets, on the basis of the last known closing price on the major market on which they are traded, or the relevant market as used by the index provider. If the last known closing price is not a true reflection, the valuation shall be based on the probable sale price estimated by the Board of Directors in a prudent and bona fide manner.

Unlisted securities or securities not traded on a stock exchange or another regulated market which functions in a regular manner is recognised and accessible to the public, shall be valued on the basis of the probable sale price estimated in a prudent and bona fide manner by a qualified professional appointed for this purpose by the Board of Directors.

If permitted by market practice, liquid assets, Money Market instruments and all other instruments may be valued at their nominal value plus accrued interest or according to the linear amortisation method. Any decision to value the assets in the portfolio using the linear amortisation method must be approved by the Board of Directors, which will record the reasons for such a decision. The Board of Directors will put in place appropriate checks and controls concerning the valuation of the instruments.

d) Conversion of foreign currencies

The accounts of each sub-fund are kept in the currency in which its net asset value is expressed, and the financial statements are expressed in that currency.

The cost of investments denominated in currencies other than the sub-fund accounting currency is converted into that currency at exchange rate prevailing at the purchase date.

Income and expenses in currencies other than the sub-fund accounting currency are converted into that currency at the exchange rate at the transaction date.

The resulting realised and unrealised foreign exchange profits or losses are included in the Statement of Operations and Changes in Net Assets.

The exchange rates used for each date are the WM Reuters closing spot rates 4 pm London time.

e) Valuation of forward foreign exchange contracts

Unexpired forward foreign exchange contracts are valued on the basis of the forward exchange rates applicable on the valuation date or the closing date, and the resulting unrealised profits or losses are recorded in the accounts. The unrealised appreciation/depreciation is disclosed in the Statement of net assets under “Net Unrealised gain/(loss) on financial instruments”. Realised gains/(losses) and change in unrealised appreciation/depreciation as a result thereof are included in the Statement of operations and changes in net assets respectively under “Net realised result on Financial instruments” and “Movement on net unrealised gain/(loss) on Financial instruments”.

f) Valuation of futures contracts

Unexpired futures contracts are valued at the last price known on the valuation date or closing date and the resulting unrealised profits or losses are accounted for.

Margin accounts to guarantee the liabilities on futures contracts are included in the “Cash at banks and time deposits” account in the statement of net assets. The unrealised appreciation/depreciation is disclosed in the Statement of net assets under “Net Unrealised gain/(loss) on financial instruments”. Realised gains/(losses) and change in unrealised appreciation/depreciation as a result thereof are included in the Statement of operations and changes in net assets respectively under “Net realised result on Financial instruments” and “Movement on net unrealised gain/(loss) on Financial instruments”.

g) Valuation of credit default swaps

The value of a Credit Default Swap (CDS) shall be determined by comparing the value of the protection swap leg and the value of the premium swap leg. The value of the premium leg is obtained by discounting the future premium flows using the relevant risk-adjusted discount. The value of the protection leg is the present value of the expected loss inherent to the contract. Default probabilities used to compute the expected loss are derived from the structure of par market swap rates. Par market swap rates will be obtained from a cross-section of market counterparties.

The unrealised appreciation/(depreciation) is disclosed in the Statement of net assets under “Net Unrealised gain on financial instruments” or “Net Unrealised loss on financial instruments”. Realised gains/(losses) and change in unrealised appreciation/(depreciation) as a result thereof are included in the Statement of operations and changes in net assets respectively under “Net realised result on Financial instruments” and “Movement on net unrealised gain/(loss) on Financial instruments”.

h) Valuation of swaps

A Total Return Swap (TRS) is a bilateral agreement in which each party agrees to exchange payments based on the performance of an underlying instrument represented by a security, commodity, basket or index thereof for a fixed or variable rate. One party pays out the total return of a specific reference asset, and in return, receives a regular stream of payments. The total performance will include gains and losses on the underlying, as well as any interest or dividends during the contract period according to the type of underlying. The cash flows to be exchanged are calculated by reference to an agreed upon notional amount or quantity.

Total return swaps are marked to market at each NAV calculation date. The unrealised appreciation/depreciation is disclosed in the Statement of net assets under "Net Unrealised gain/(loss) on financial instruments". Realised gains/(losses) and change in unrealised appreciation/depreciation as a result thereof are included in the Statement of operations and changes in net assets respectively under "Net realised result on Financial instruments" and "Movement on net unrealised gain/(loss) on Financial instruments".

i) Income

Dividends are recorded at the ex-dividend date. Interest is recorded on an accrual basis.

j) Tracking error

The tracking error is the difference between the return on a sub-fund, and the benchmark it is expected to track. It is measured as the standard deviation of the difference in the fund's and index's returns over time.

k) Anti-Dilution Levy ("ADL")

As detailed in the prospectus, for certain sub-funds, in addition to the entry, conversion or exit cost that may be charged to the investor, an anti-dilution levy may be paid by the investors to the Sub-Fund. Such amount covers transaction costs (including dealing costs relating to the acquisition, disposal or sale of portfolio's assets, taxes and stamp duties) in order to ensure that all investors in a Sub-Fund are treated equitably and preserve the Net Asset Value of the relevant sub-fund (notably to accommodate large inflows and outflows) where the implementation of such mechanism is considered to be in the best interests of the sub-fund's shareholders.

This anti-dilution levy is charged to subscriptions, conversions and redemptions to ensure that the existing shareholders are not adversely affected by shareholders who are executing subscription, conversion or redemption orders.

No anti-dilution levy is charged to redemption orders directly followed by subscription orders on the same share class, made by the same investor (applying to the same number of shares and the same Net Asset Value).

In the event swing pricing mechanism or an anti-dilution levy mechanism is applied to a sub-fund, as decided by the Board of Directors, the other mechanism shall not be cumulatively applied to client orders.

Anti-dilution levy will not be charged for conversions within a same sub-fund.

ADL levels are updated at each ADL committees (composed of representatives of Management Company: Management, Board of directors, Compliance, Risk etc.). The committees are held approximately once a quarter, or, in case of major events such as the modification of a country tax which could cause the significant variation of those levels.

Information regarding maximum ADL levels are available in the section "Documents" for each sub-fund accessible on the following website: https://www.bnpparibas-am.com.

The detail of applicable rates for the relevant sub-funds as at 31 December 2025 is detailed in the below table:

Sub-fund	ADL IN Max (in %)	ADL OUT Max (in %)	ADL IN Real (in %)	ADL OUT Real (in %)

l) Swing Pricing

A sub-fund may suffer reduction of the net asset value due to investors purchasing, selling and/or switching in and out of the sub-fund at a price that does not reflect the dealing costs associated with this sub-fund's portfolio trades undertaken by the Investment Manager to accommodate such cash inflows or outflows. In order to mitigate this effect and enhance the protection of existing shareholders, the mechanism known as “swing pricing” may be applied at the discretion of the Board of Directors of the Company.

Such Swing Pricing mechanism may be applied to a given sub-fund when its total capital activity (i.e. net amount of subscriptions and redemptions) exceeds a pre-determined threshold determined as a percentage of the net assets value for a given Valuation Day. The net asset value of the relevant sub-fund may then be adjusted by an amount (the "swing factor") to compensate for the expected transaction costs resulting from the capital activity. The level of thresholds, if and when applicable, will be decided on the basis of certain parameters which may include the size of the sub-fund, the liquidity of the underlying market in which the respective sub-fund invests, the cash management of the respective sub-fund or the type of instruments that are used to manage the capital activity. The swing factor is, amongst others, based on the estimated transaction costs of the financial instruments in which the respective sub-fund may invest. Typically, such adjustment will increase the net asset value when there are net subscriptions into the sub-fund and decrease the net asset value when there are net redemptions. Swing pricing does not address the specific circumstances of each individual investor transaction. An ad hoc internal committee is in charge of the implementation and periodic review of the operational decisions associated with swing pricing. This committee is responsible for decisions relating to swing pricing and the ongoing approval of swing factors which form the basis of pre-determined standing instructions.

In principle, the swing factor will not exceed 1% of the respective sub-fund's net asset value. Such limit could however be raised beyond this maximum level when necessary and on a temporary basis to protect the interests of shareholders, typically during exceptional market conditions, situations such as a global pandemic, a financial crisis, a geopolitical crisis, or any other exceptional event causing a severe deterioration of the liquidity.

The Swing Pricing mechanism may be applied across all sub-funds of the Company.

During the year ending 31 December 2025, the sub-fund Global Corp Bond (formerly Global Corporate Bond) is under the scope of the Swing Pricing activity.

During the year, the sub-fund has applied the Swing Pricing.

No Swing pricing has been applied as of 31 December 2025.

m) Cross-investments

The value of the cross-investments of the sub-funds has not been deducted for the calculation of the combined total net assets of the Company.

The total value of those cross-investments as at 31 December 2025 amounted to:

Sub-funds investing in other BNP Paribas Easy sub-funds	**Sub-funds held by other BNP Paribas Easy sub-funds**	**Currency of the sub-fund investing**	**Market value (in EUR)**
JPM ESG EMU Government Bond IG	JPM ESG EMU Government Bond IG 10Y+	EUR	25 852 406
		Total:	**25 852 406**

The net assets at the end of the financial year of combined figures would be EUR 38 414 495 308 without taking into account the cross-investments values.

Note 3 - Management fees (maximum per annum)

Management fees are calculated daily and deducted monthly from the average net assets of a sub-fund, share category, or share class, paid to the Management Company and serve to cover remuneration of the asset managers and also distributors in connection with the marketing of the Company's stock.

The amount charged varies depending on the value of the NAV. Subject to applicable laws and regulations, the Management Company may pay part or all of its fees to any person that invests in or provides services to the Company or in respect of any sub-fund the form of a commission, retrocession, rebate or discount. The objective of such fees is inter alia, to facilitate the commercialisation and the management of the Company or the sub-funds, taking into account the best interest of the shareholders. These fees will take the form of a percentage of the management fees based on modalities as described in the prospectus.

The management fees applicable to the "UCITS ETF" category are applicable to all share sub-categories and classes with the word "UCITS ETF" in their denomination.

The management fees applicable to the "Track Classic" category are applicable to all share sub-categories and classes with the word "Track Classic" and/or "Classic" in their denomination.

The management fees applicable to the "Track I" category are applicable to all share sub-categories and classes with the word "Track I" and/or "I" in their denomination.

The management fees applicable to the "Track I Plus" category are applicable to all share sub-categories and classes with the word "Track I Plus" and/or "I Plus" in their denomination.

The management fees applicable to the "Track Privilege" category are applicable to all share sub-categories and classes with the word "Track Privilege" and/or "Privilege" in their denomination.

No management fee is charged for the "Track X" category.

Note 4 - Other fees

Fee serving to cover notably the following services:

- administration, domiciliary and fund accounting
- audit
- custody, depositary and safekeeping
- documentation, such as preparing, printing, translating and distributing the Prospectus, KIDs, financial reports
- ESG certification and service fees
- financial index licensing & data fees (if applicable)
- legal expenses
- listing of shares on a stock exchange and all related services for ETF secondary market (if applicable)
- management company expenses (including among other AML/CFT, KYC, Risk and oversight of delegated activities)
- marketing operations
- publishing fund performance data
- registration expenses including translation
- services associated with the required collection, tax and regulatory reporting, and publication of data about the Company, its investments and shareholders
- transfer, registrar and payment agency

These fees do not include fees paid to independent Directors and reasonable out-of-pocket expenses paid to all Directors, expenses for operating hedged shares, duties, taxes and transaction costs associated with buying and selling assets, brokerage and other transactions fees, interest and bank fees.

Note 5 - Taxes

The Company is liable to an annual "*taxe d'abonnement*" in Luxembourg representing 0.05% of the net asset value. This rate is reduced to 0.01% for:

a) sub-funds with the exclusive objective of collective investment in money market instruments and deposits with credit institutions;

b) sub-funds with the exclusive objective of collective investment with credit institutions;

c) sub-funds, categories or classes reserved for Institutional Investors, Managers and UCIs.

The following are exempt from this "*taxe d'abonnement"*:

a) the value of assets represented by units or shares in other UCIs, provided that these units, or shares have already been subject to the "*taxe d'abonnement";*

b) sub-funds, categories and/or classes:

(i) whose securities are reserved for Institutional Investors, Managers, or UCIs and
(ii) whose sole object is the collective investment in money market instruments and the placing of deposits with credit institutions, and
(iii) whose weighted residual portfolio maturity does not exceed 90 days, and
(iv) that have obtained the highest possible rating from a recognised rating agency;

c) sub-funds, categories and/or classes reserved to:

(i) institutions for occupational retirement pension or similar investment vehicles, set up at the initiative of one or more employers for the benefit of their employees, and
(ii) companies having one or more employers investing funds to provide pension benefits to their employees;

d) sub-funds whose main objective is investment in microfinance institutions;

e) sub-funds, categories and/or classes:

(i) whose securities are listed or traded on at least one stock exchange or another regulated market operating regularly that is recognized and open to the public, and
(ii) whose exclusive object is to replicate the performance of one or several indices.

If several classes of securities exist within the sub-fund, the exemption only applies to classes fulfilling the condition of sub-point (i).

f) sub-funds whose shares are traded throughout the day on at least one regulated market or on a multilateral trading facility and in which at least one market maker intervenes to ensure that the price of their units or shares does not vary significantly from their net asset value and, where applicable, from their indicative net asset value.

Where several classes of shares exist within the sub-fund, the exemption applies only to classes of shares that fulfil the conditions set out in point (f).

When it is due, the "*taxe d'abonnement"* is payable quarterly on the basis of the relevant net assets and is calculated at the end of the quarter for which the tax is applicable.

In addition, the Company may be subject to foreign UCI's tax, and/or other regulators levy in the country where the sub-fund is registered for distribution.

Note 6 - Dividends

For the "Track IH EUR MD - Distribution" share class, which pay monthly dividends, the following dividends were paid:

Payment dates:

Month	Record Date [1]	NAV ex-Dividend Date [2]	Payment Date [3]
January	30 January 2025	31 January 2025	4 February 2025
February	27 February 2025	28 February 2025	4 March 2025
April	29 April 2025	30 April 2025	5 May 2025
May	28 May 2025	30 May 2025	3 June 2025
June	27 June 2025	30 June 2025	2 July 2025
July	30 July 2025	31 July 2025	4 August 2025
August	28 August 2025	29 August 2025	2 September2025
September	29 September 2025	30 September 2025	2 October 2025
October	30 October 2025	31 October 2025	4 November 2025
November	26 November 2025	28 November 2025	2 December 2025
December	30 December 2025	31 December 2025	5 January 2026

For the "UCITS ETF QD - Distribution" and "UCITS ETF QD H EUR - Distribution" share classes, which pay quarterly dividends, the following dividends were paid:

Payment dates:

Month	Record Date [1]	NAV ex-Dividend Date [2]	Payment Date [3]
March	27 February 2025	28 February 2025	4 March 2025
June	28 May 2025	30 May 2025	3 June 2025
September	28 August 2025	29 August 2025	2 September 2025
December	27 November 2025	28 November 2025	2 December 2025

For the "UCITS ETF SD - Distribution" share class, which pay semi-annual dividends, the following dividends were paid:

Payment date:

Month	Record Date [1]	NAV ex-Dividend Date [2]	Payment Date [3]
April	28 March 2025	31 March 2025	2 April 2025
December	27 November 2025	28 November 2025	2 December 2025

[1] If for a particular reason the valuation was not possible on the day in question, the Record Date would be put off to the preceding valuation date.

[2] Dates are based on a valuation simulation. Consequently, dates may change depending on the composition of the portfolio at this date. If for a particular reason, the day in question the valuation was not possible, the ex-date would be put off to the valuation day possible immediately afterwards, and the payment date will be put off 3 bank business days in Luxembourg after the new ex-dividend date. If for a particular reason, the settlement on the new payment date is not possible (e.g. bank holiday on a specific currency or country), settlement will be made the 1st business day after or any other day communicated by the local agent.

[3] If this day is not a bank business day in Luxembourg, the payment date will be the next following bank business day. If for a particular reason, the settlement is not possible (e.g. bank holiday on a specific currency or country), settlement will be made the 1st business day after or any other day communicated by the local agent.

The yearly dividends were paid on 28 April 2025 for shares outstanding on 23 April 2025 with ex-dividend date 24 April 2025.

Note 7 - Share currencies

The net asset value per share is priced in the currency of the share class and not in the currency of the sub-fund in the section “Key figures relating to the last 3 years”.

Note 8 - Exchange rates

The exchange rates used for consolidation and for the conversion of share classes denominated in a currency other than the reference currency of the relevant sub-fund as at 31 December 2025 were the following:

EUR 1 = AUD 1.76120
EUR 1 = CHF 0.93050
EUR 1 = CZK 24.1720
EUR 1 = GBP 0.87315
EUR 1 = JPY 184.08915
EUR 1 = NOK 11.84650
EUR 1 = USD 1.17445

Note 9 - Futures contracts

As at 31 December 2025, the following positions were outstanding:

Note 11 - Swaps

Credit Default Swaps

The Company has entered into credit default swaps agreements whereby it exchanges fixed income for income linked to changes in credit events, whether with respect to an index or a bond (see details in the tables below), and vice versa. These amounts are calculated and recognised at each calculation of the Net Asset Value; the amount of the unrealised capital gain is stated under "Net Unrealised gain on financial instruments" in the Statement of net assets, and the amount of net unrealised capital loss is given under "Net Unrealised loss on financial instruments" in the Statement of net assets.

Total Return Swaps

A Total Return Swap (TRS) is an agreement to exchange the total performance of a bond or other underlying asset (share, index, etc.) for a benchmark rate plus a spread. The total performance includes the interest coupons, dividends and profits and losses on the underlying asset over the life of the agreement, depending on the type of underlying concerned. The risk in this type of agreement is linked to the fact that the benefit for each counterparty will depend on how the underlying asset performs over time, which is unknown at the time at which the agreement is entered into.

Note 13 - Changes in the composition of the securities portfolio

The list of changes in the composition of the securities portfolio during the year is available free of charge at the Management Company's registered office and from local agents.

Note 14 - List of Investment managers

As at 31 December 2025, all opened sub-funds are managed by BNP PARIBAS ASSET MANAGEMENT Europe, except for the sub-funds below:

- BNP PARIBAS ASSET MANAGEMENT Europe, Paris, abbreviated to BNPP AM Europe
- BNP PARIBAS ASSET MANAGEMENT UK Ltd.*, London, abbreviated to BNPP AM UK

Sub-fund	Fund managers
Alpha Enhanced EUR Corp Bond ((launched on 20 June 2025) (formerly Alpha Enhanced € Corporate Bond))	**BNPP AM Europe** Subdelegating Cash Management to **BNPP AM UK**
Alpha Enhanced Europe (launched on 15 July 2025)	**BNPP AM Europe** Subdelegating FX Management to **BNPP AM UK**
Alpha Enhanced Global High Yield (launched on 26 June 2025)	**BNPP AM Europe** Subdelegating FX and Cash Management to **BNPP AM UK** **BNPP AM UK** (FX Management)
Alpha Enhanced USD Corp Bond ((launched on 26 June 2025) (formerly Alpha Enhanced USD Corporate Bond))	**BNPP AM Europe** Subdelegating Cash Management to **BNPP AM UK** **BNPP AM UK** (FX Management)

Note 15 - Transaction fees

Transaction fees incurred by the Company relating to purchase or sale of transferable securities, money market instruments, derivatives or other eligible assets are mainly composed of standard fees, sundry fees on transaction, stamp fees, brokerage fees, custody fees, VAT fees, stock exchange fees and RTO fees (Reception and Transmission of Orders).

In line with bond market practice, a bid-offer spread is applied when buying and selling these securities. Consequently, in any given transaction, there will be a difference between the purchase and sale prices quoted by the broker, which represents the broker's fee.

Note 16 - Tax reclaims as part of the Aberdeen/Fokus Bank Project

In several European Union member states, community law grants undertakings for collective investments (UCIs) the right to file claims with a view to recovering taxes they have been unjustly forced to pay. When one member state imposes a greater tax burden on a foreign UCI than on a resident UCI, this constitutes discrimination under community law.

This principle was confirmed by the ruling of the Court of Justice of the European Union (CJEU) in the "Aberdeen" case (18 June 2009). This ruling acknowledges that a non-resident UCI can be subject to discriminatory taxation, which constitutes an obstacle to freedom of establishment and/or the free movement of capital. Other CJEU rulings have subsequently confirmed this jurisprudence. Key examples are the rulings in the Santander (10 May 2010) and Emerging Markets (10 April 2014) cases regarding French and Polish tax legislation, respectively.

In light of this jurisprudence and in order to safeguard the right of UCIs to receive tax rebates, the management company has decided to file claims with the tax authorities in several member states whose discriminatory legislation fails to comply with community law. Preliminary studies will be carried out to determine whether or not the claims are viable, i.e. for which funds, in which member states and over what period of time it is necessary to request a rebate.

* On 1 January 2026 BNP PARIBAS ASSET MANAGEMENT UK LIMITED merged into AXA INVESTMENT MANAGERS UK LIMITED.

To date, there is no European legislation establishing a uniform framework for this type of claim. As a result, the time taken to receive a rebate and the complexity of the procedure vary depending on the member state in question. This means that it is necessary to constantly monitor developments in this regard.

Due to the uncertainty of the recoverability of the amounts, no accrual is recorded and it is booked under the caption “Income on investments and assets” when received.

Note 17 - SFDR Statement

Information on environmental and/or social characteristics and/or sustainable investments is available in the relevant annexes under the (unaudited) Sustainable Finance Disclosure Regulation section.

Note 18 - Significant events

Since 24 February 2022, the Board of Directors has been very attentive to the consequences of the conflict between Russia and Ukraine. The Board of Directors closely monitors developments in terms of geopolitical events and their impact on global outlook, market and financial risks in order to take all necessary measures in the interest of shareholders.

As from 1 January 2025, PWC was replaced by EY as auditor of the SICAV.

From 21 May 2025, the new address of the Management Company : BNP Paribas Asset Management Luxembourg is 60 Avenue J.F. Kennedy, L-1855 Luxembourg, Grand Duchy of Luxembourg.

Note 19 - Subsequent event

On 1 January 2026, BNP PARIBAS ASSET MANAGEMENT UK LIMITED merged into AXA INVESTMENT MANAGERS UK LIMITED.

Global market risk exposure

The Management Company of the Fund, after a risk profile assessment, decided to adopt the commitment approach to determine the global market risk exposure.

Information on the Remuneration Policy in effect within the Management Company

Below are the quantitative information on remuneration, as required by Article 22 of the AIFM directive (Directive 2011/ 61 / EC of 8 June 2011) and by Article 69 (3) of the UCITS V directive (Directive 2014/91/EU of 23 July 2014), in a format compliant with the recommendations of the AFG (French Asset Management Association)[1].

Aggregate remuneration of members of staff of BNPP AM Luxembourg (art 22-2-e of AIFM directive and art 69-3 (a) of the UCITS V directive):

	Number of staff	Total remuneration (K EUR) (fixed + variable)	of which total variable remuneration (K EUR)
All employees of **BNPP AM Luxembourg**	77	9 732	1 231

Aggregate remuneration of members of staff of BNPP AM Luxembourg whose activity have a material impact on the risk profile of the firm and who are indeed "Identified Staff"[2] (art 22-2-f of AIFM directive and art 69-3 (b) of the UCITS V directive):

Business Area	Number of staff	Total Remuneration (k EUR)
Identified Staff of **BNPP AM Luxembourg:**	4	1 027
Of which AIFM/ UCITS and European mandates Portfolio managers	-	-

Other information:

- **Number of AIF and UCITS Funds under management of BNPP AM Luxembourg:**

	Number of funds as at 31.12.2025	AuM (billion EUR) as at 31.12.2025[3]
UCITS	220	182.3
AIF	17	2.9

- Under the supervision of the BNP PARIBAS ASSET MANAGEMENT Holding's remuneration committee and its board of directors, an independent and central audit of the Global BNP Paribas Asset Management remuneration policy and its implementation over the 2024 financial year was conducted between April and May 2025. The results of this audit, which covered BNP Paribas Asset Management entities with an AIFM and/or UCITS license, was rated "Satisfactory" highlighting the solidity of the measures in place, particularly during its key steps: identification of regulated employees, consistency of remuneration with performance, application of regulatory deferral rules, implementation of indexation and deferral mechanisms.

- More information on the determination of the variable remuneration is set out in the qualitative disclosure on the remuneration policy, which is available on the website of the company.

[1] NB: The remuneration amounts above are not directly reconcilable with the accounting data of the year, as they reflect the annual salary base of staff as at 31 December 2025, and amounts allocated at the closing of the annual variable compensation review process, whether this variable remuneration is deferred or not.

[2] The list of Identified Staff is determined based on end of year review.

[3] The communicated amounts include master-feeder funds.

Transparency of the promotion of environmental or social characteristics and of sustainable investments

BNP Paribas Asset Management's approach

On its website, BNP Paribas Asset Management provides investors with its policy on the integration of sustainability risks in its investment decision-making process, in accordance with Article 3 of Regulation 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability-related disclosures in the financial services sector (SFDR).

In addition, BNP Paribas Asset Management will make available to subscribers and to the public a document outlining its policy on how its investment strategy considers environmental, social and governance-quality criteria, and the means implemented to contribute to the energy and ecological transition, as well as a strategy for implementing this policy. This information will fall under the transparency of information required regarding the negative impacts on sustainability and will be available on the Management Company's website in accordance with Article 4 of the SFDR Regulation.

The SFDR sets rules on transparency and sustainability-related disclosures.

Alongside the SFDR, Regulation 2020/852 of the European Parliament and of the Council of 18 June 2020, on the establishment of a framework to facilitate sustainable investment and amending the SFDR (Taxonomy Regulation) is intended to establish criteria for determining whether an economic activity qualifies as environmentally sustainable.

European taxonomy is a classification system for listing environmentally sustainable activities.

Economic activities that are not recognised by the Taxonomy Regulation are not necessarily damaging to the environment, nor unsustainable. Furthermore, other activities that may make a substantial contribution to environmental and social objectives are not necessarily part of the Taxonomy Regulation as yet.

BNP Paribas Asset Management's current general approach to considering environmental, social and governance (ESG) criteria is detailed on our website:
https://www.bnpparibas-am.com/en/what-we-do/sustainability-policies-reports/

For BNP Paribas Asset Management, responsible investment is built on six pillars. The first four pillars help improve our management practices, including developing new investment ideas, optimising our portfolio composition, managing risk, and influencing the companies and various markets in which we invest.

Integrating ESG

Our analysts and fund managers systematically take the most relevant ESG factors into account when selecting the replicated index, regardless of the investment process and asset class in question. Where possible, our policy and approach to ESG integration apply to all of our index investment processes. In line with BNPP AM's convictions, a non-financial analysis allows us to identify risks and opportunities of which other market participants may be unaware, giving us a competitive advantage. The ESG integration process and controversy analysis are guided by the methodology of the index administrator, and the ESG data that it uses for the replicated index. The general principles that BNPP AM applies when selecting indices which have non-financial characteristics are described in the prospectus, in the section on risks when factoring sustainability into our management.

Voting, dialogue and engagement

We have established detailed voting guidelines on a number of ESG issues. We also believe that an enhanced dialogue with issuers can improve our investment processes and allow us to manage risk more effectively over the long term. Our managers and experts at the BNPP AM Sustainability Centre interact with the companies in which we invest, with the aim of encouraging them to adopt environmentally responsible practices.

We also try to meet with public authorities on a regular basis in order to discuss ways of tackling climate change. Our voting policy is available here:

Unaudited appendix

Responsible business conduct, and sector exclusions

The indices selected by BNPP AM apply ESG exclusions based on the 10 corporate responsibility principles of the UN Global Compact. Applicable to all sectors of industry, this universal benchmark for assessing companies covers the areas of international human rights, labour, environment and anti-corruption.

In addition to the principles of the United Nations Global Compact, BNP Paribas Asset Management applies the OECD Guidelines for Enterprises. Specific ESG standards that must be met by companies operating in certain sectors that are sensitive to social and environmental impacts. They are defined in sectoral policies that, to date, concern palm oil, pulp, coal, nuclear energy, controversial weapons, unconventional oil & gas, mining, asbestos, agriculture and tobacco. Non-compliance with the ESG standards defined by BNP Paribas Asset Management leads to the exclusion of companies from the investment scope. Lastly, in accordance with applicable regulations, some sectors such as controversial weapons (anti-personnel mines and cluster munitions) are banned from any investment.

The BNPP AM Responsible Business Conduct Policy and its various elements are available here:
https://docfinder.bnpparibas-am.com/api/files/D8E2B165-C94F-413E-BE2E-154B83BD4E9B

A forward-looking vision

We believe there are three key pillars that underpin a more sustainable and inclusive economic system: energy transition, environmental protection and equality. We have defined a set of objectives and performance indicators to measure how we will align our research, portfolios, and government and business engagement with these three issues - the "3Es".

Range of funds with an enhanced non-financial approach

Some of our range incorporates the four fundamental pillars of our sustainability approach, adding: enhanced ESG strategies, which applies to multi-factor, best-in-class and labelled funds; thematic strategies for investing in companies whose products and services provide concrete solutions to environmental and/or social challenges, and impact investment strategies for generating an intentional, positive and measurable environmental and/or social impact on top of a financial return.

Our CSR approach

As responsible investors, we must meet or even exceed the standards that we expect from the businesses in which we invest. We therefore factor sustainable development into our operations and community work, with an emphasis on gender equality amongst our staff, reducing our waste and CO2 emissions, and getting young people into work.

The results of our sustainability approach are summarised in our non-financial report, available on our website:
https://docfinder.bnpparibas-am.com/api/files/a270ea84-c2e7-4a3b-8b6d-2094d980763c

Sub-funds	SFDR classification	Additional non-financial information
Bloomberg Europe Defense (launched on 19 May 2025) Bloomberg US Treasury (launched on 15 October 2025) Bloomberg US Treasury 1-3Y (launched on 15 October 2025) Energy & Metals Enhanced Roll EUR Overnight ((launched on 17 June 2025) (formerly € Overnight)) FTSE EPRA/Nareit Developed Europe (liquidated on 30 January 2025) FTSE EPRA/Nareit Eurozone Capped Markit iBoxx Global Corp Liquid 150 Capped (USD Hedged) (formerly Markit iBoxx Global Corporates Liquid 150 Capped (USD Hedged)) MSCI ACWI (launched on 15 December 2025) MSCI Europe (launched on 16 October 2025) MSCI Japan (launched on 16 October 2025) S&P 500 II (launched on 6 May 2025)	Sub-funds that do not promote environmental, social or governance characteristics, nor have sustainable investment as their objective within the meaning of Articles 8 and 9 of the SFDR.	In their investment strategy, the sub-funds neither promote environmental, social or governance characteristics, nor have sustainable investment as their objective within the meaning of Articles 8 and 9 of the SFDR. The sub-funds' investments do not take into account the EU criteria for environmentally sustainable economic activities as set out in the Taxonomy Regulation.

To be noted that any difference between the charts "top investments" in the appendix section and the securities portfolio above are coming from the use of different data's sources.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY ALPHA ENHANCED € CORPORATE BOND **Legal Entity Identifier:** 213800ECW7S2KG664F70

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

● ● ☐ Yes ● ○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **57.4%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It made **sustainable investments with a social objective** : ___%

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile compared to its investment universe

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy: **100%**

- The percentage of the portfolio covered by ESG analysis based on the ESG internal proprietary methodology: **99.9%**

- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe: **66.7 vs 60.5** (**Bloomberg Euro Aggregate Corporate (EUR) RI**)

- The weighted average GHG intensity of the portfolio compared to the weighted average GHG intensity of its investment universe: **44.9 vs 96.2** (**Bloomberg Euro Aggregate Corporate (EUR) RI**)

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **57.4%**

...and compared to previous periods ?

Non applicable for the first periodic report

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry,

environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process : RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

<u>Corporate mandatory indicators:</u>

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint

3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product investment strategy is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a "watch list" monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the investment manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and the construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es"(Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support all investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Policy, Engagement and Voting Policy and include the following:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;

- In case of equity holings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues.

- Ensuring all securities included in the portfolio have supportive ESG research.

- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water

9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations (SFDR: Sustainability-related disclosures - BNP Paribas)

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31.12.2025

Largest investments**	Sector	% Assets*	Country**

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

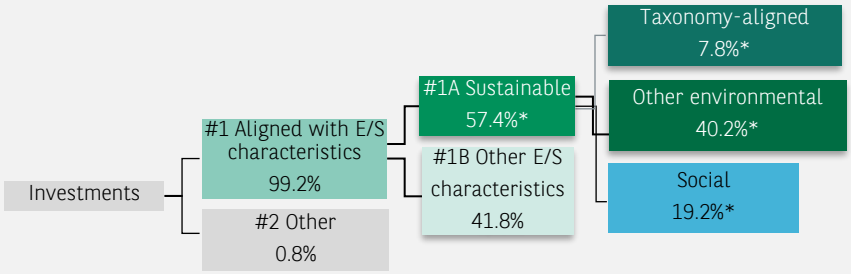

What was the asset allocation ?

Asset allocation describes the share of investments in specific assets.

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is **99.2%.**

The proportion of sustainable investments of the financial product is **57.4%.**

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

Sectors (Level 2)	% Asset
Banking	18.4%
Industrial Products	9.8%
Consumer Staple Products	9.0%
Utilities	7.7%
Financial Services	7.7%
Industrial Services	7.3%
Materials	6.5%
Real Estate	5.6%
Telecommunications	5.3%
Consumer Discretionary Products	5.3%
Retail & Whsle - Discretionary	4.9%

Health Care	3.7%
Other	2.1%
Media	1.9%
Insurance	1.6%
Tech Hardware & Semiconductors	1.1%
Software & Tech Services	0.8%
Oil & Gas	0.5%
Cash	0.4%
Derivatives	0.4%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No:

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

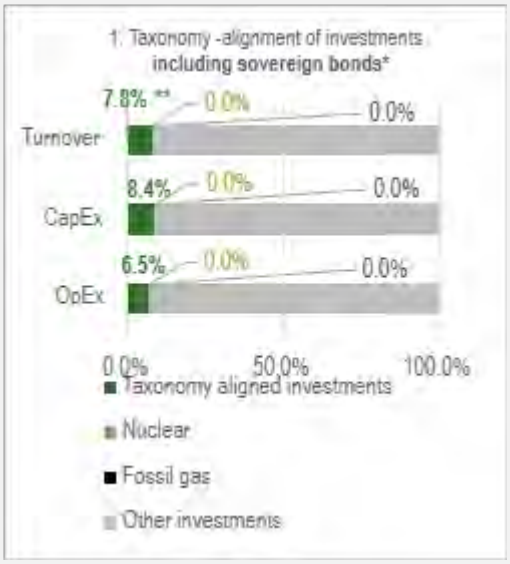

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

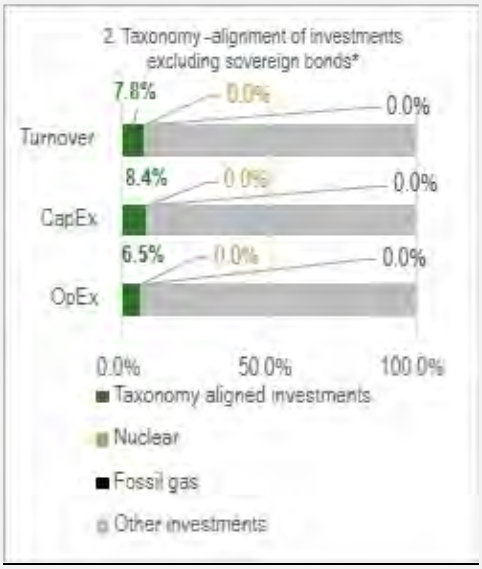

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

Not applicable for the first periodic report

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **40.2%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **19.2%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product investment strategy shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos, ...), as these companies are deemed to be In violation of international norms, or to cause unacceptable harm to society and/or the environment..

  More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology.

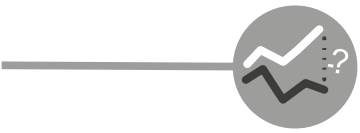

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus.

- The financial product shall have the weighted average GHG intensity of its portfolio at least 20% lower than the weighted average GHG intensity of its investment universe.

- The financial product shall invest at least 50% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

  There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY ALPHA ENHANCED EUROPE **Legal Entity Identifier: 213800P9G7ZS58RLY703**

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective**: ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **56.8%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It made **sustainable investments with a social objective** : ___%

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using the methodology of the index provider. As such, the product is exposed to issuers that demonstrate superior or improve environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

Environmental: energy efficiency, reduction of emissions of greenhouse gases, treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health

and safety, diversity)

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights.

The exclusion criteria are applied with regard to issuers that are in violation of international norms andconvention, or operate in sensitive sectors as defined by external data providers.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable, in collaboration with BNP Paribas Asset Management's Sustainability Centre.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy; **100%**

- The percentage of the financial product's portfolio covered by the ESG analysis based on the ESG internal proprietary methodology; **100%**

- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectuse: **64.1 vs 61.7 (MSCI Europe (EUR) NR)**

-The weighted average carbon footprint of the portfolio compared to the weighted average carbon foortprint of its investment universe.: **54.9 vs 57.4**

- The percentage of the financial product's portfolio invested in 'sustainable investments ' as defined in Article 2 (17) of SFDR: **56.8%**

...and compared to previous periods ?

Non applicable for the first periodic report.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation,

sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Centre following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH ' principle) and should follow good governance practices. BNPP AM uses its proprietary methodology and/or relies on information provided by the reference benchmark administrator to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH principle). In this respect, for such sustainable investments, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights. Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH principle). In this respect, for such sustainable investments, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the "3Es" (Energy transition, environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts indicators are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector

5. Share of non-renewable energy consumption and production

6. Energy consumption intensity per high impact climate sector

7. Activities negatively affecting biodiversity sensitive areas

8. Emissions to water

9. Hazardous waste ratio

10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

12. Unadjusted gender pay gap

13. Board gender diversity

14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

4. Lack of a supplier code of conduct

9. Lack of a human rights policy

Sovereign mandatory indicators

15. GHG intensity

16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations. (https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF)

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product investment strategy is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights

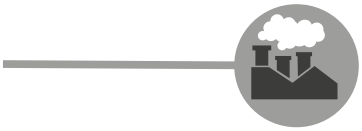

This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a "watch list"monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts indicators are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions

2. Carbon footprint

3. GHG intensity of investee companies

4. Exposure to companies active in the fossil fuel sector

5. Share of non-renewable energy consumption and production

6. Energy consumption intensity per high impact climate sector

7. Activities negatively affecting biodiversity sensitive areas

8. Emissions to water

9. Hazardous waste ratio

10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

12. Unadjusted gender pay gap

13. Board gender diversity

14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

4. Lack of a supplier code of conduct

9. Lack of a human rights policy

Sovereign mandatory indicators

15. GHG intensity

16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations. (https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF)

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31.12.2025

Largest investments**	Sector	% Assets*	Country**
ASML HOLDING NV	Information	2.99%	Netherlands
NOVARTIS AG N	Health Care	2.42%	Switzerland
ROCHE HOLDING PAR AG	Health Care	2.10%	Switzerland
SHELL PLC	Energy	2.07%	United Kingdom
ASTRAZENECA PLC	Health Care	1.86%	United Kingdom
HSBC HOLDINGS PLC	Financials	1.80%	United Kingdom
ALLIANZ	Financials	1.80%	Germany
SAP	Information	1.58%	Germany
UNILEVER PLC	Consumer Staples	1.47%	United Kingdom
NESTLE SA N	Consumer Staples	1.45%	Switzerland
IBERDROLA SA	Utilities	1.36%	Spain
ZURICH INSURANCE GROUP AG N	Financials	1.30%	Switzerland
TOTALENERGIES	Energy	1.22%	France
BANCO BILBAO VIZCAYA ARGENTARIA SA	Financials	1.18%	Spain
SIEMENS N AG N	Industrials	1.14%	Germany

Source of data: BNP Paribas Asset Management,calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

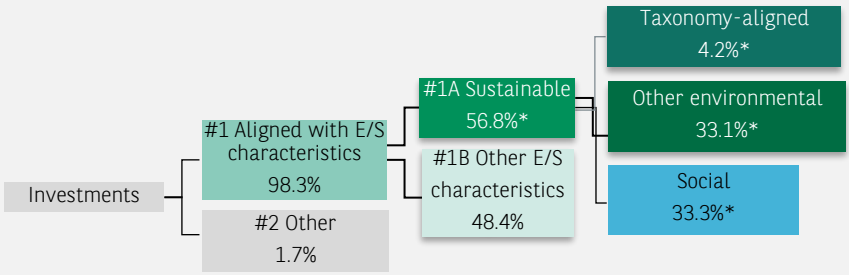

Asset allocation describes the share of investments in specific assets.

What was the asset allocation ?

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 98.3%.

The proportion of sustainable investments of the financial product is 56.8%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

Sectors (Level 2)	% Asset
Capital Goods	12.23%
Insurance	11.65%
Pharmaceuticals Biotechnology & Life Sciences	10.75%
Banks	9.30%
Energy	6.02%
Food Beverage & Tobacco	5.26%
Utilities	5.02%

Telecommunication Services	4.77%
Financial Services	3.37%
Semiconductors & Semiconductor Equipment	3.10%
Materials	3.06%
Consumer Discretionary Distribution & Retail	2.99%
Household & Personal Products	2.87%
Transportation	2.39%
Commercial & Professional Services	2.38%
Consumer Services	2.32%
Consumer Durables & Apparel	2.20%
Consumer Staples Distribution & Retail	1.96%
Software & Services	1.79%
Technology Hardware & Equipment	1.52%
Cash	1.48%
Media & Entertainment	1.08%
Health Care Equipment & Services	0.90%
Automobiles & Components	0.76%
Real Estate Management & Development	0.33%
Equity Real Estate Investment Trusts (REITs)	0.28%
Derivatives	0.21%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

  ☐ Yes:

  ☐ In fossil gas ☐ In nuclear energy

  ✖ No:

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- *What was the share of investments made in transitional and enabling activities?*

  The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

- *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?*

  Non applicable for the first periodic report

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **33.1%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **33.3%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product shall comply with the eligible stock criteria by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

  More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (Our sustainability policies and reports - BNP Paribas Asset Management - Corporate EN).

- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology.

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus.

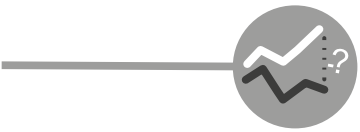

-

- The financial product shall have the weighted average carbon footprint of its portfolio lower than the weighted average carbon footprint of its investment universe

- The financial product shall invest at least 40% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "*What were the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives*" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

  There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY ALPHA ENHANCED GLOBAL HIGH YIELD **Legal Entity Identifier:** 213800FG31ORXXLXAX91

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **33.8%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It made **sustainable investments with a social objective** : ___%

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile compared to its investment universe

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy: **100%**

- The percentage of the portfolio covered by ESG analysis based on the ESG internal proprietary methodology: **99.9%**

- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe: **57.0 vs 48.8** (**BBG Global HY Corp ex Financial ex EM 1-10Y 2% Issuer Cap (Hedged in USD) RI**)

- The weighted average GHG intensity of the portfolio compared to the weighted average GHG intensity of its investment universe: **152.5 vs 282.7** (**BBG Global HY Corp ex Financial ex EM 1-10Y 2% Issuer Cap (Hedged in USD) RI**)

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **37.8%**

...and compared to previous periods ?

Non applicable for the first periodic report

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned

with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process : RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

<u>Corporate mandatory indicators:</u>

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint

3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product investment strategy is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a "watch list" monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the investment manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and the construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es"(Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support all investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Policy, Engagement and Voting Policy and include the following:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;

- In case of equity holings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues.

- Ensuring all securities included in the portfolio have supportive ESG research.

- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas

8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations (SFDR: Sustainability-related disclosures - BNP Paribas)

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31.12.2025

Largest investments**	Sector	% Assets*	Country**
BNPP INSC USD 1D LVNAV I C	Funds	7,70%	Luxembourg

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

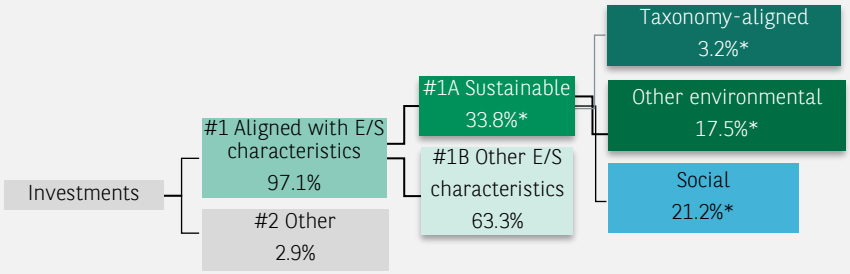

What was the asset allocation ?

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is **97.1%.**

The proportion of sustainable investments of the financial product is **33.8%.**

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

Sectors (Level 2)	% Asset
Consumer Discretionary Products	18.5%
Materials	13.0%
Industrial Services	9.8%
Consumer Discretionary Services	9.1%
Money Market Fund	7.7%
Retail & Whsle - Discretionary	7.0%
Media	5.9%
Consumer Staple Products	5.7%
Health Care	4.2%
Software & Tech Services	3.4%
Tech Hardware & Semiconductors	2.7%
Industrial Products	2.6%

Oil & Gas	2.4%
Real Estate	2.4%
Telecommunications	2.1%
Derivatives	1.2%
Utilities	1.1%
Cash	0.6%
Retail & Wholesale - Staples	0.4%
Financial Services	0.4%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No:

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

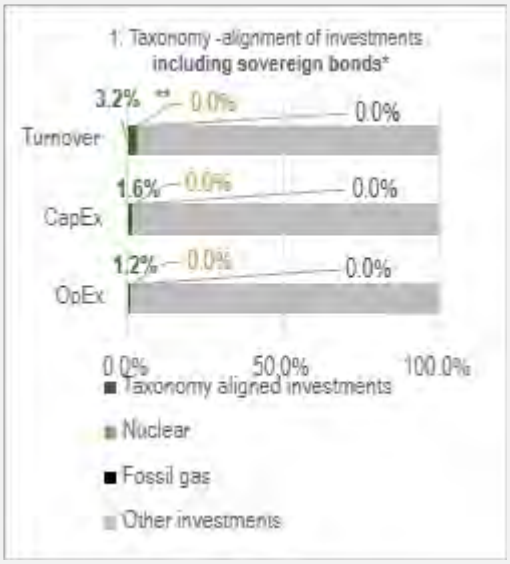

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

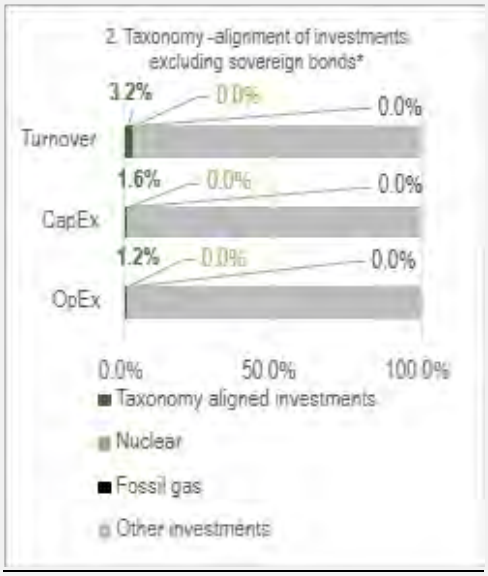

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

Not applicable for the first periodic report

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **17.5%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **21.2%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product investment strategy shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos, ...), as these companies are deemed to be In violation of international norms, or to cause unacceptable harm to society and/or the environment..

  More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology.

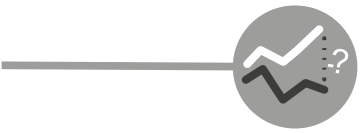

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus.

- The financial product shall have the weighted average GHG intensity of its portfolio at least 20% lower than the weighted average GHG intensity of its investment universe.

- The financial product shall invest at least 20% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

  There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY ALPHA ENHANCED USD CORPORATE BOND **Legal Entity Identifier:** 213800BD8NLCOC4CIS43

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **37.8%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It made **sustainable investments with a social objective** : ___%

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile compared to its investment universe

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy: **100%**

- The percentage of the portfolio covered by ESG analysis based on the ESG internal proprietary methodology: **99.4%**

- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe: **60.3 vs 49.3** (**Bloomberg US Corporate (USD) RI**)

- The weighted average GHG intensity of the portfolio compared to the weighted average GHG intensity of its investment universe: **54.4 vs 273.8** (**Bloomberg US Corporate (USD) RI**)

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **37.8%**

...and compared to previous periods ?

Non applicable for the first periodic report

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry,

environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process : RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

<u>Corporate mandatory indicators:</u>

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint

3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product investment strategy is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a "watch list" monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the investment manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and the construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es"(Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support all investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Policy, Engagement and Voting Policy and include the following:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;

- In case of equity holings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues.

- Ensuring all securities included in the portfolio have supportive ESG research.

- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas

8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations (SFDR: Sustainability-related disclosures - BNP Paribas)

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31.12.2025

Largest investments**	Sector	% Assets*	Country**
BNPP INSC USD 1D LVNAV I C	Funds	3.37%	Luxembourg

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

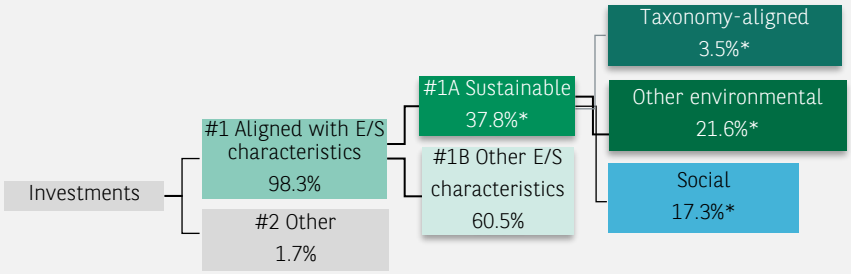

What was the asset allocation ?

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is **98.3%.**

The proportion of sustainable investments of the financial product is **37.8%.**

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

Sectors (Level 2)	% Asset
Health Care	14.3%
Banking	11.5%
Financial Services	10.9%
Industrial Products	8.5%
Insurance	6.5%
Consumer Staple Products	5.9%
Consumer Discretionary Products	5.2%
Real Estate	5.0%
Retail & Whsle - Discretionary	4.5%
Materials	4.5%
Industrial Services	4.5%

Software & Tech Services	4.3%
Media	4.2%
Money Market Fund	3.4%
Tech Hardware & Semiconductors	3.3%
Telecommunications	1.9%
Derivatives	1.0%
Cash	0.4%
Utilities	0.2%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No:

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

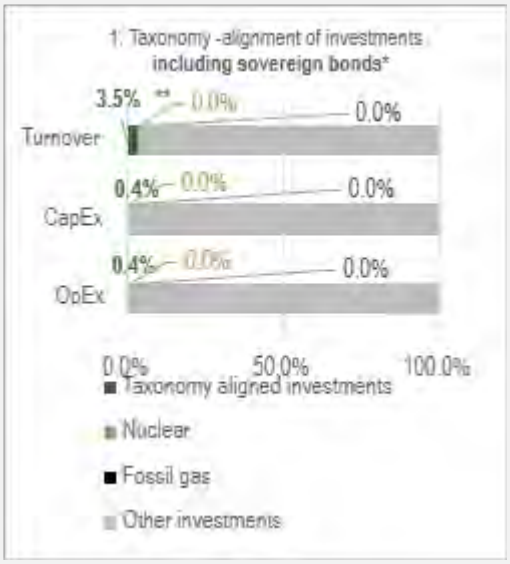

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

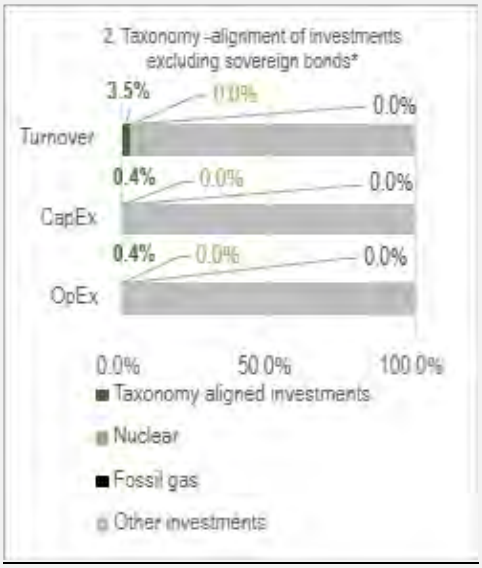

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

Not applicable for the first periodic report

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **21.6%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **17.3%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product investment strategy shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos, ...), as these companies are deemed to be In violation of international norms, or to cause unacceptable harm to society and/or the environment..

  More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology.

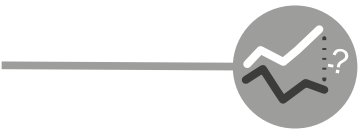

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus.

- The financial product shall have the weighted average GHG intensity of its portfolio at least 20% lower than the weighted average GHG intensity of its investment universe.

- The financial product shall invest at least 35% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

  There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY Dividend Europe **Legal Entity Identifier:** 21380079LTAMFHP5ZR65

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective**: ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **46.3%** of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It made **sustainable investments with a social objective** : ___%

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using ESG external and/or internal proprietary methodology(ies). As such, the product is exposed to issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The investment strategy selects issuers through:

- o A positive screening using a selectivity approach. This involves evaluation of Environmental, Social, and Governance (ESG) performance of an issuer against a combination of environmental, social and governance factors which include but not limited to :
  - Environmental: energy efficiency, reduction of emissions of greenhouse gases, treatment of waste;

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity);

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights.

o A negative screening applying exclusion criteria with regard to issuers that are in violation of international norms and convention, such as the UN Nations Global Compact principles and OECD Guidelines for Multinational Enterprises, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC) policy.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights, according to the Stewardship policy, where applicable.

In synthetic replication, engagement with issuers and exercise of voting rights, if any, are only applied for the Financing Assets underlying securities.

The BNP Paribas High Dividend Europe (EUR) NR index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's economic exposure compliant with the RBC policy: **100%**

- The percentage of the financial product's economic exposure covered by the ESG analysis based on external and/or ESG proprietary methodology(ies): **100%**

- The minimum percentage of the financial product's economic exposure investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC policy and/or any other extra financial criteria: **20%**

- The weighted average ESG score of the financial product's economic exposure compared tothe weighted average ESG score of its investment universe: **64.1 vs 61.2 (STOXX Europe 600 (EUR) NR)*.**

- The percentage of the financial product's economic exposure in "sustainable investments" as defined in Article 2 (17) of SFDR: **46.3%**

* Source: BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

- *...and compared to previous periods ?*

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's economic exposure compliant with the RBC policy	100%	100%	100%	100%	In line with the financial product's commitment
The percentage of the financial product's economic exposure covered by the ESG analysis based on external and/or ESG proprietary methodology(ies)	100%	100%	100%	100%	In line with the financial product's commitment
The minimum percentage of the financial product's economic exposure investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC policy and/or any other extra financial criteria	20%	20.0%	20.0%	20%	In line with the financial product's commitment
The weighted average ESG score of the financial product's economic exposure compared tothe weighted average ESG score of its investment universe	64.3 vs 59.4	63.9 vs 59.4	64.7 vs 59.9	64.1 vs 61.2	In line with the financial product's commitment
The percentage of the financial product's reference benchmark economic exposure in "sustainable investments" as defined in Article 2 (17) of SFDR	61.2%	50.3%	46.1%	46.3%	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year.
** Figures reported in 2023 are expressed as a quaterly weighted average.
** Figures reported in 2024 and 2025 are expressed as a quaterly weighted average based on the AUM.

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

As of the date of the annual report, the financial product applies synthetic replication. Consequently, the sustainable investments to which the financial product is exposed and described below are the ones of the underlying securities of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

- *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

In synthetic replication, engagement with issuers and exercise of voting rights, if any, are only applied for the Financing Assets underlying securities.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicators
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions :

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

In synthetic replication, engagement with issuers and exercise of voting rights, if any, are only applied for the Financing Assets underlying securities.

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water

9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy
Sovereign mandatory indicators
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

What were the top investments of this financial product?

The financial product applies synthetic replication.
The top investments disclosed below are therefore twofold:
- The assets physically held at the level of the financial product
- The assets of the reference benchmark underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

Assets physically held at the level of the financial product:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31.12.2025

Largest investments**	Sector	% Assets*	Country**
IVECO GROUP NV	Industrials	8,61%	Italy
SIEMENS ENERGY N AG	Industrials	8,38%	Germany
TRS RECEIVE EUR FIXED PAY FLOAT + 38BP 2026-03-24	Financials	7,84%	France
EURO	Cash	7,04%	Eurolands
UNICREDIT	Financials	6,51%	Italy
INTESA SANPAOLO	Financials	6,04%	Italy

SAIPEM	Energy	2,02%	Italy

Source of data: BNP Paribas Asset Management, calculated on 31/12/2025.
The largest investments are based on the underlying portfolio data of the investment strategy and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

What was the asset allocation ?

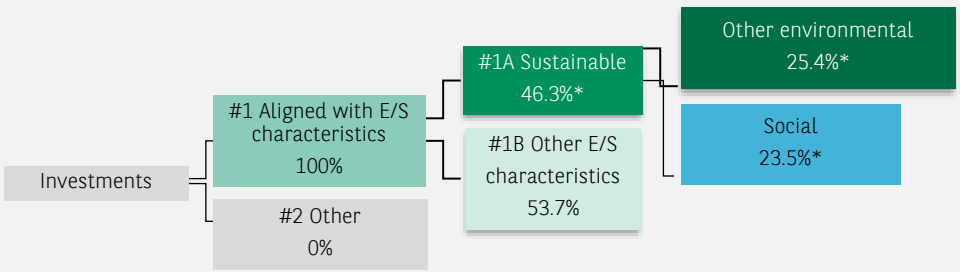

Asset allocation describes the share of investments in specific assets.

As of the date of the annual report, the financial product applies synthetic replication. Consequently, the asset allocation for this financial product is the ones of the underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 100%.

The proportion of sustainable investments of the financial product is 46.3%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

The financial product applies synthetic replication.
The top investments disclosed below are therefore twofold:

- The assets physically held at the level of the financial product
- The assets of the reference benchmark underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

Assets physically held at the level of the financial product:

Sectors (level 2)	% Asset
Banks	33,88%
Capital Goods	20,83%
Insurance	13,26%
Cash	8,53%
Health Care Equipment & Services	6,13%
Financial Services	4,44%
Software & Services	3,90%
Consumer Durables & Apparel	3,47%
Commercial & Professional Services	3,25%
Utilities	2,30%

Source of data: BNP Paribas Asset Management, calculated on 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

Assets of the reference benchmark underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy:

Sectors	% Asset
Financials	32,8%
Industrials	12,6%
Consumer Discretionary	11,9%
Energy	8,8%
Health Care	8,6%
Consumer Staples	8,2%
Utilities	7,2%
Communication Services	6,1%
Real Estate	2,0%
Information Technology	1,3%
Materials	0,5%

Source of data: BNP Paribas Asset Management, calculated on 31/12/2025.
The sector breakdown is based on the underlying portfolio data of the investment strategy and is based on the transaction date.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, and it did not do so.

- ○ *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

  - ☐ Yes:
    - ☐ In fossil gas
    - ☐ In nuclear energy
  - ☒ No:

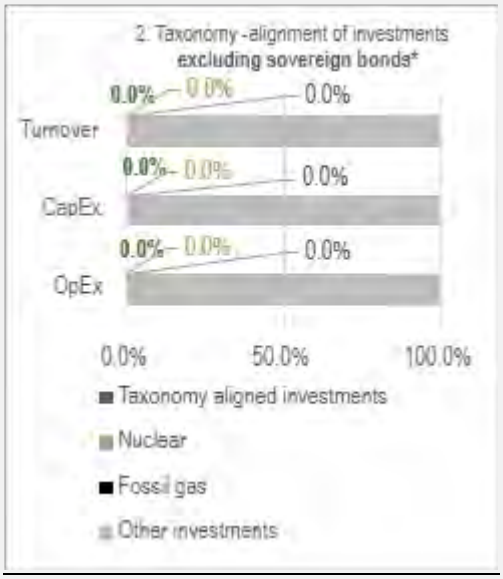

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2022*	0.0%	/	/
2023**	0.0%	/	/
2024***	0.0%	0.0%	0.0%
2025***	0.0%	0.0%	0.0%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the current level of data at the disposal of the management company at the time.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **25.4%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **23.5%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

The financial product investment strategy shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be In violation of international norms, or to cause unacceptable harm to society and/or the environment

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)

- The financial product investment strategy shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the proprietary and/or external ESG methodology.

- The financial product's investment universe of the investment strategy shall be reduced by a minimum of 20% due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC Policy and/or other extra-financial criteria.

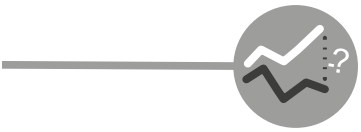

- The financial product shall have the weighted average ESG score of its investment strategy portfolio higher than the weighted average ESG score of its investment universe.

- The financial product shall have the weighted average greenhouse gas (GHG) intensity of its investment strategy portfolio lower than the weighted average greenhouse gas (GHG) intensity of its investment universe.

- The financial product shall invest at least 35% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR and as disclosed in the asset allocation below. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus

  There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance, between two strategy reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the reference benchmark administrator rules.

  In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

The BNP Paribas High Dividend Europe Equity ESG (EUR) NR index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: https://indx.bnpparibas.com/nr/FELETR.pdf.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "How did the sustainability indicators perform?"

How did this financial product perform compared with the reference benchmark?

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one

of the reference benchmark are very close.

- *How did this financial product perform compared with the broad market index?*

	GHG emissions[1,2]	ESG score[2]
Financial product	59.2	64.1
Broad market index[3]	92.2	61.2

(1) GHG emissions is calculated as the sum, for each GHG emissions of the investee company's (for the relevant scope), weighted by the ratio of the current value of the investment to the investee company's entreprise value..

(2) Source: BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) BNP Paribas High Dividend Europe (EUR) NR

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY ECPI CIRCULAR ECONOMY LEADERS **Legal Entity Identifier:** 213800SYH51E7L1MSV45

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **73.1%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It made **sustainable investments with a social objective** : ___%

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The investment strategy selects issuers through:

- A negative screening applying exclusion criteria. This is applied with regard to issuers with a poor ESG profile and issuers that are in systematic violation of the UN Global Compact.

- A positive screening using a selectivity approach. This involves evaluation of Environmental, Social, and Governance (ESG) performance of an issuer against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases, treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

The ECPI Circular Economy Leaders Equity (EUR) NR has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The weight of each of the three pillars, E, S and G, is respectively of minimum 20% in the scoring framework.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product, and are based on the reference benchmark ESG methodology:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The percentage of the financial product's portfolio compliant with the reference benchmark eligible stock criteria taking into account sectorial and controversial policies: **100%**

- The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology: **100%**

-The average GHG intensity of the financial product's portfolio compared to the average GHG intensity of its investment universe : **137.5 vs 118.5**

-The average gender board diversity ratio of the financial product's portfolio compared to the average gender board diversity ratio of its investment universe **37.6% vs 35.6%**

-The minimum percentage of the financial product's universe reduction due to exclusion of securities with low ESG score and/or sector exclusions and/or any other extra financial criteria **20%**

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **73.1%**

** Source: BNP Paribas Asset Management. For data availbaility purposes, another provider of extrafinancial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy*

...and compared to previous periods ?

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's portfolio compliant with the reference benchmark eligible stock criteria taking into account sectorial and controversial policies	100%	100%	100%	100%	In line with the financial product's commitment
The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology	100%	100%	100%	100%	In line with the financial product's commitment

The average GHG intensity of the financial product's portfolio compared to the average GHG intensity of its investment universe	/	/	/	137.5 vs 118.5	In line with the financial product's commitment
The average gender board diversity ratio of the financial product's portfolio compared to the average gender board diversity ratio of its investment universe	/	/	/	37.3% vs 35.6%	In line with the financial product's commitment
The minimum percentage of the financial product's universe reduction due to exclusion of securities with low ESG score and/or sector exclusions and/or any other extra financial criteria	20.0%	20.0%	20.0%	20%	In line with the financial product's commitment
The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation	62.8%	69.5%	71.3%	73.1%	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The investment manager is using, as of the date of the prospectus, the BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus,to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

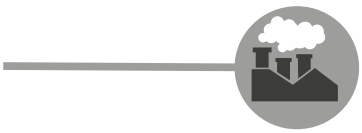

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
6. Energy consumption intensity per high impact climate sector
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations (SFDR: Sustainability-related disclosures - BNP Paribas)

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: the 31.12.2025

Largest investments**	Sector	% Assets*	Country**
ALBEMARLE CORP	Materials	3.65%	United States
INTEL CORPORATION CORP	Information Technology	2.93%	United States
KERING SA	Consumer Discretionary	2.85%	France
CATERPILLAR INC	Industrials	2.63%	United States
THERMO FISHER SCIENTIFIC INC	Health Care	2.54%	United States
LVMH	Consumer Discretionary	2.52%	France
ASML HOLDING NV	Information Technology	2.51%	Netherlands
CRH PUBLIC LIMITED PLC	Materials	2.48%	Republic of Ireland
FORTESCUE LTD	Materials	2.47%	Australia
TJX INC	Consumer Discretionary	2.32%	United States
NVIDIA CORP	Information Technology	2.12%	United States
CISCO SYSTEMS INC	Information Technology	2.12%	United States
DANONE SA	Consumer Staples	2.11%	France
HITACHI LTD	Industrials	2.10%	Japan
JOHNSON CONTROLS INTERNATIONAL PLC	Industrials	2.10%	Republic of Ireland

Source of data: BNP Paribas Asset Management,calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

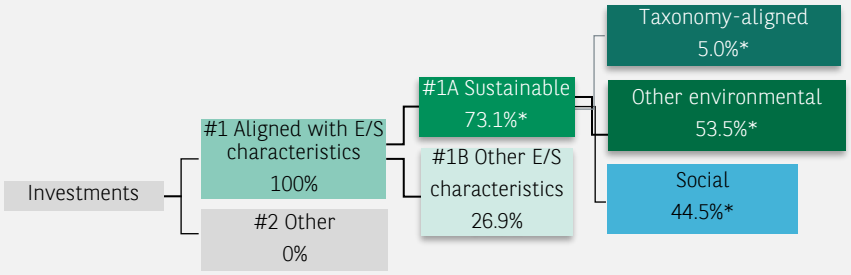

Asset allocation describes the share of investments in specific assets.

What was the asset allocation ?

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 100.0%.

The proportion of sustainable investments of the financial product is 73.1%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

Sectors	% Asset
Capital Goods	17.88%
Materials	15.91%
Automobiles & Components	9.77%
Semiconductors & Semiconductor Equipment	9.04%
Food Beverage & Tobacco	9.01%
Consumer Durables & Apparel	8.99%
Software & Services	6.83%
Household & Personal Products	4.98%
Commercial & Professional Services	4.81%
Pharmaceuticals Biotechnology & Life Sciences	2.54%
Consumer Discretionary Distribution & Retail	2.32%
Technology Hardware & Equipment	2.12%
Health Care Equipment & Services	2.08%
Consumer Staples Distribution & Retail	1.74%
Utilities	1.70%
Cash	0.22%
Financial Services	0.08%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

  - [x] Yes:
    - [ ] In fossil gas
    - [x] In nuclear energy
  - [ ] No:

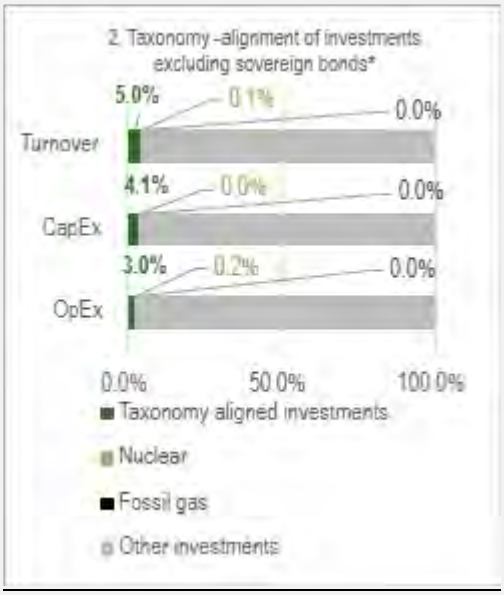

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2022*	2.3%	/	/
2023**	3.4%	/	/
2024***	6.5%	4.0%	3.1%
2025***	5.0%	4.1%	3.1%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the current level of data at the disposal of the management company at the time.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **53.5%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **44.5%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product excludes companies violating international norms, exposed to tobacco or controversial weapons, as well as companies active in sectors with possible negative impacts on the climate in accordance with the exclusion criteria defined in the Article 12. 1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission. The details on how the exclusions are applied, depending on the asset classes, are available on our website (https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ section « PAB exclusions for ESMA Guidelines »).

- The financial product complies, as part of its investment policy, with the list of exclusion criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ . As the financial product is a passively-managed ETF, the implementation of exclusions depends on the index provider's own ESG data and methodology.

- The GHG intensity of the investee companies in portfolio is lower than that of the extra-financial investment universe (PAI 3).

- The portfolio's board gender diversity ratio is higher than that of the extra-financial investment universe (PAI 13)

- The financial product shall comply with the eligible stock criteria by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

- The financial product shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.

- The financial product's investment universe of the investment strategy, as defined in the Prospectus, shall be reduced by a minimum of 30% due to exclusion of securities with low ESG score and/or sector exclusions and/or other extra-financial criteria.

- The financial product's investment universe of the investment strategy shall follow the thematic diversification criteria (Circular Supplies, Resources Recovery, Product Life Extension, Sharing Platform, Product as Service).

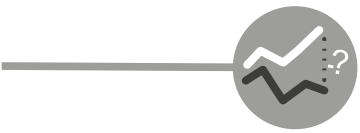

- The financial product shall have the weighted average greenhouse gas (GHG) intensity of its investment strategy portfolio lower than the weighted average greenhouse gas (GHG) intensity of its investment universe.

- The financial product shall have the gender board diversity ratio of its portfolio higher than the weighted average gender board diversity ratio of its investment universe

- The financial product shall invest at least 50% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What were the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

The ECPI Circular Economy Leaders Equity (EUR) NR has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.
The methodology used for the calculation of the reference benchmark can be found at: www.ecpigroup.com.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*".

- *How did this financial product perform compared with the reference benchmark?*

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

- *How did this financial product perform compared with the broad market index?*

	GHG emissions[1]	ESG score[2,3]
Financial product	137.5	63.6
Broad market index[2]	118.5	54.4

(1) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY ECPI GLOBAL ESG BLUE ECONOMY **Legal Entity Identifier:** 213800UYPG6HU9NTW481

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **84.6%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It made **sustainable investments with a social objective** : ___%

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The investment strategy selects issuers through:

- A negative screening applying exclusion criteria. This is applied with regard to issuers with a poor ESG profile and issuers that are in systematic violation of the UN Global Compact.

- A positive screening using a selectivity approach. This involves evaluation of Environmental, Social, and Governance (ESG) performance of an issuer against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

The ECPI Global ESG Blue Economy (EUR) NR Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product, and are based on the reference benchmark ESG methodology:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The percentage of the financial product's portfolio compliant with the reference benchmark eligible stock criteria taking into account sectorial and controversial policies: **100%**

- The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology: **100%**

- The average GHG intensity of the financial product's portfolio compared to the average GHG intensity of its investment universe: **241.5 vs 118.6**

-The average gender board diversity ratio of the financial product's portfolio compared to the average gender board diversity ratio of its investment universe: **36.0%**

- The minimum percentage of the financial product's universe reduction due to exclusion of securities with low ESG score and/or sector exclusions and/or any other extra financial criteria: **30%**

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **84.6%**

Source: BNP Paribas Asset Management. For data availability purposes, another provider of extrafinancial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy.

...and compared to previous periods ?

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's portfolio compliant with the reference benchmark eligible stock criteria taking into account sectorial and controversial policies	100%	100%	100%	100%	In line with the financial product's commitment
The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology	100%	100%	100%	100%	In line with the financial product's commitment
The average GHG intensity of the financial product's portfolio compared to the average GHG intensity of its investment universe	/	/	/	241.5 vs 118.6	In line with the financial product's commitment

The average gender board diversity ratio of the financial product's portfolio compared to the average gender board diversity ratio of its investment universe	/	/	/	36.0%	In line with the financial product's commitment
The minimum percentage of the financial product's universe reduction due to exclusion of securities with low ESG score and/or sector exclusions and/or any other extra financial criteria.	20.0%	20.0%	30.0%	30.0%	In line with the financial product's commitment
The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation	77.1%	79.7%	77.6%	84.6%	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The investment manager is using, as of the date of the prospectus, the BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus,to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions

reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://group.bnpparibas/en/sfdr-sustainability-related-disclosures

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
6. Energy consumption intensity per high impact climate sector
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations (SFDR: Sustainability-related disclosures - BNP Paribas)

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31/12/2025

Largest investments**	Sector	% Assets*	Country**
VESTAS WIND SYSTEMS	Industrials	3.19%	Denmark
FIRST SOLAR INC	Information Technology	3.07%	United States
SALMAR	Consumer Staples	2.83%	Norway
PRYSMIAN	Industrials	2.71%	Italy
SIEMENS ENERGY N AG	Industrials	2.50%	Germany
APPLIED MATERIAL INC	Information Technology	2.46%	United States
MOWI	Consumer Staples	2.40%	Norway
NISSUI CORP	Consumer Staples	2.36%	Japan
MARUHA NICHIRO CORP	Consumer Staples	2.27%	Japan
GREAT LAKES DREDGE AND DOCK CORP	Industrials	2.26%	United States
EDP RENOVAVEIS SA	Utilities	2.26%	Spain
IBERDROLA SA	Utilities	2.24%	Spain
A P MOLLER MAERSK CLASS B B	Industrials	2.24%	Denmark
ALFA LAVAL	Industrials	2.21%	Sweden
ENGIE SA	Utilities	2.17%	France

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

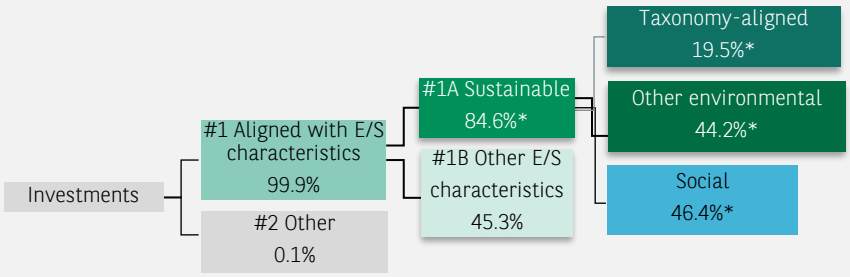

Asset allocation describes the share of investments in specific assets.

What was the asset allocation ?

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 99.9%.

The proportion of sustainable investments of the financial product is 84.6%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

- *In which economic sectors were the investments made ?*

Sectors (level 2)	% Asset
Capital Goods	20.16%
Utilities	16.25%
Commercial & Professional Services	15.87%
Food Beverage & Tobacco	15.24%
Transportation	9.69%
Semiconductors & Semiconductor Equipment	6.98%
Materials	4.93%
Consumer Services	3.94%
Consumer Durables & Apparel	3.34%
Pharmaceuticals Biotechnology & Life Sciences	3.30%
Cash	0.31%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

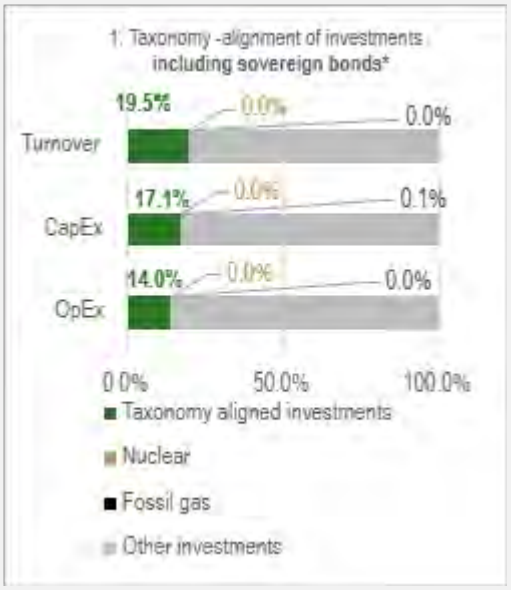

☒ No:

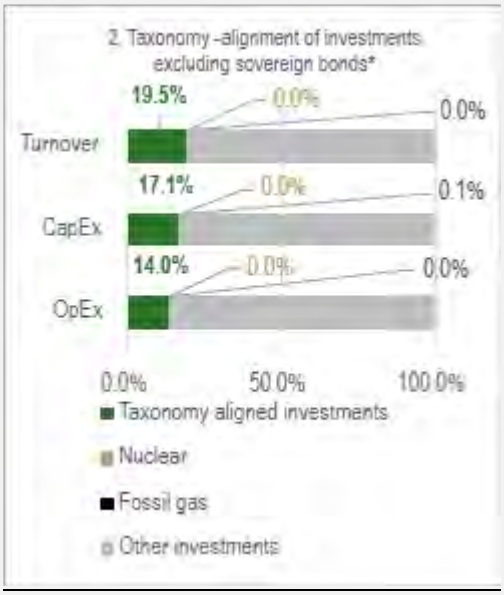

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2022*	13.5	/	/
2023**	13.6%	/	/
2024***	14.1 %	11.3%	8.3%
2025***	19.5%	17.1%	14.0%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the current level of data at the disposal of the management company at the time.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **44.2%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **46.4%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product excludes companies violating international norms, exposed to tobacco or controversial weapons, as well as companies active in sectors with possible negative impacts on the climate in accordance with the exclusion criteria defined in the Article 12. 1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission. The details on how the exclusions are applied, depending on the asset classes, are available on our website (https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ section « PAB exclusions for ESMA Guidelines »)

- The financial product shall comply with the eligible stock criteria by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

- The financial product shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.

- The financial product's investment universe of the investment strategy, as defined in the Prospectus, shall be reduced by a minimum of 30% due to exclusion of securities with low ESG score and/or sector exclusions and/or other extra-financial criteria.

- The financial product's investment universe of the investment strategy shall follow the thematic diversification criteria (Coastal livelihoods, Energy and resources, Fish and seafood, Pollution Reduction, Shipping Routes).

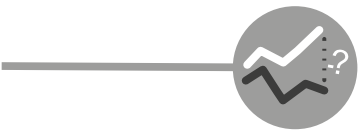

- The financial product shall have the weighted average greenhouse gas (GHG) intensity of its investment strategy portfolio lower than the weighted average greenhouse gas (GHG) intensity of its investment universe

- The financial product shall have the gender board diversity ratio of its investment strategy portfolio higher than the weighted average gender board diversity ratio of its investment universe.

- The financial product shall invest at least 60% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What were the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

  There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

  In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

The ECPI Global ESG Blue Economy (EUR) NR Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.
The methodology used for the calculation of the reference benchmark can be found at: www.ecpigroup.com.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*".

- *How did this financial product perform compared with the reference benchmark?*

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

- *How did this financial product perform compared with the broad market index?*

	GHG emissions[1,2]	ESG score[1]
Financial product	241.5	60.8
Broad market index[2]	118.6	54.4

Product name : BNP PARIBAS EASY ECPI GLOBAL ESG HYDROGEN ECONOMY **Legal Entity Identifier:** 2138005RK8E82TQ9PH38

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **76.6%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It made **sustainable investments with a social objective** : ___%

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The investment strategy selects issuers through:

- A negative screening applying exclusion criteria. This is applied with regard to issuers with a poor ESG profile and issuers that are in systematic violation of the UN Global Compact

A positive screening using a selectivity approach. This involves evaluation of Environmental, Social, and Governance (ESG) performance of an issuer against a combination of environmental, social and governance factors which include but not limited to :

- Environmental: energy efficiency, reduction of emissions of greenhouse gases, treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable, in collaboration with BNP Paribas Asset Management's Sustainability Centre.

The ECPI Global ESG Hydrogen Economy (NR) Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product, and are based on the reference benchmark ESG methodology:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The percentage of the financial product's portfolio compliant with the the reference benchmark business involvement exclusion criteria: **100%**

- The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology: **100%**

- The average GHG intensity of the financial product's portfolio compared to the average GHG intensity of its investment universe: **377.6 vs 119.8 (MSCI World (USD) NR)**

- The average gender board diversity ratio of the financial product's portfolio compared to the average gender board diversity ratio of its investment universe: **35.8% vs 35.7%**

- The minimum percentage of the financial product's economic exposure investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions and/or any other extra financial criteria: **30.0%**

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **76.6%**

** Source: BNP Paribas Asset Management. For data availbaility purposes, another provider of extrafinancial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy*

...and compared to previous periods ?

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's portfolio compliant with the the reference benchmark business involvement exclusion criteria	100%	100%	100%	100%	In line with the financial product's commitment
The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology	100%	100%	100%	100%	In line with the financial product's commitment
The average GHG intensity of the financial product's portfolio compared to the average GHG intensity of its investment universe	/	/	/	377.6 VS 119.8	In line with the financial product's commitment
The average gender board diversity ratio of the financial product's portfolio compared to the average gender board diversity ratio of its investment universe	/	/	/	35.8% vs 35.7%	In line with the financial product's commitment

The minimum percentage of the financial product's economic exposure investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions and/or any other extra financial criteria	20.0%	20.0%	30.0%	30.0%	In line with the financial product's commitment
The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation	79.2%	76.3%	76.3%	76.6%	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The investment manager is using, as of the date of the prospectus, the BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus,to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation, climate change adaptation, the sustainable use and protection of water and marine resources, the transition to a circular economy, pollution prevention and control, the protection and/or restoration of biodiversity and ecosystems. The extent to which the sustainable investments with an environmental objective are aligned with the EU Taxonomy will be disclosed in the annual report of the financial product.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
6. Energy consumption intensity per high impact climate sector
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations (SFDR: Sustainability-related disclosures - BNP Paribas)

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31.12.2025

Largest investments**	Sector	% Assets*	Country**
BLOOM ENERGY CLASS A CORP A	Industrials	7.05%	United States
VESTAS WIND SYSTEMS	Industrials	3.54%	Denmark
NORDEX	Industrials	3.24%	Germany
GARRETT MOTION INC	Consumer Discretionary	3.22%	Switzerland
CUMMINS INC	Industrials	3.16%	United States
FORVIA	Consumer Discretionary	2.93%	France
SIEMENS ENERGY N AG	Industrials	2.77%	Germany
JTEKT CORP	Consumer Discretionary	2.77%	Japan
ORMAT TECH INC	Utilities	2.66%	United States
CHART INDUSTRIES INC	Industrials	2.61%	United States
UMICORE SA	Materials	2.58%	Belgium
ERG	Utilities	2.55%	Italy
ACCIONA SA	Utilities	2.53%	Spain
SSAB CLASS A A	Materials	2.51%	Sweden
EDP RENOVAVEIS SA	Utilities	2.50%	Spain

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

Asset allocation describes the share of investments in specific assets.

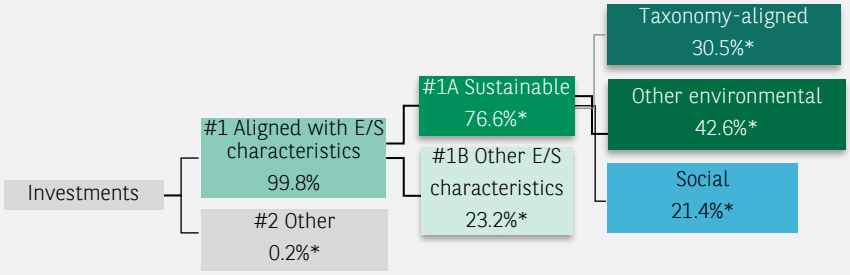

What was the proportion of sustainability-related investments?

What was the asset allocation ?

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 99.8%.

The proportion of sustainable investments of the financial product is 76.6%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

- *In which economic sectors were the investments made ?*

Sectors (Level 2)	% Asset
Capital Goods	33.31%
Utilities	27.92%
Materials	20.98%
Automobiles & Components	13.61%
Financial Services	2.08%
Commercial & Professional Services	1.84%
Cash	0.25%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European

Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

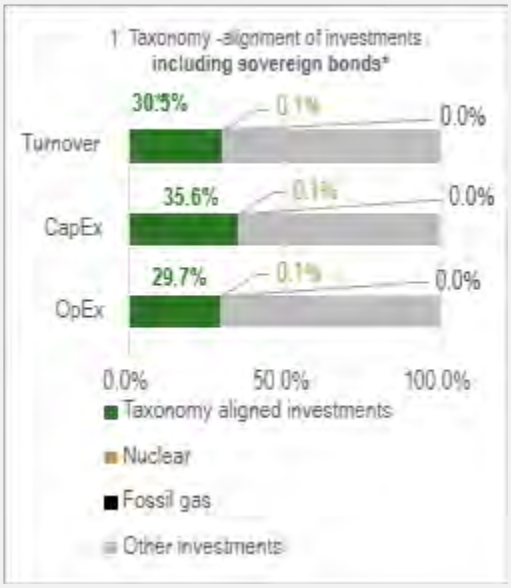

☒ Yes:

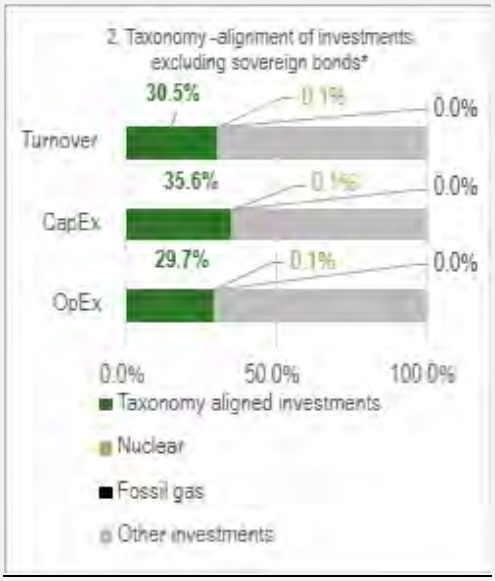

☐ In fossil gas ☒ In nuclear energy

☐ No:

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2022*	28.3%	/	/
2023**	31.4%	/	/
2024***	35.6%	29.1%	24.2%
2025***	30.5%	35.6%	29.7%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the current level of data at the disposal of the management company at the time.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **42.6%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **21.4%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product or,

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product excludes companies violating international norms, exposed to tobacco or controversial weapons, as well as companies active in sectors with possible negative impacts on the climate in accordance with the exclusion criteria defined in the Article 12. 1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission. The details on how the exclusions are applied, depending on the asset classes, are available on our website (https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ section « PAB exclusions for ESMA Guidelines »).

- The financial product shall comply with the eligible stock criteria by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

- The financial product shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.

- The financial product's investment universe of the investment strategy, as defined in the Prospectus, shall be reduced by a minimum of 30% due to exclusion of securities with low ESG score and/or sector exclusions and/or other extra-financial criteria.

- The financial product's investment universe of the investment strategy shall follow the thematic diversification criteria (Biotechnology, Life Science Tools and Services, Health Care Equipment & Suppliers).

- - The financial product shall have the weighted average greenhouse gas (GHG) intensity of its investment strategy portfolio lower than the weighted average greenhouse gas (GHG) intensity of its investment universe.

- The financial product shall have the gender board diversity ratio of its portfolio higher than the weighted average gender board diversity ratio of its investment universe

- The financial product shall invest at least 55% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What were the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

  There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

  In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNP Paribas Asset Management France

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

The ECPI Global ESG Hydrogen Economy NR Index (Bloomberg: GALPHH2N index) has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: www.ecpigroup.com.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*".

How did this financial product perform compared with the reference benchmark?

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

How did this financial product perform compared with the broad market index?

	GHG emissions[1,2]	ESG score[2,3]
Financial product	377.6	59.7
Broad market index[2]	119.8	54.3

(1) GHG emissions is calculated as the sum, for each GHG emissions of the investee company's (for the relevant scope), weighted by the ratio of the current value of the investment to the investee company's entreprise value. The ghg is expressed in tons of CO2 equivalent per million euros of entreprise value.

(2) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) ECPI Global ESG Hydrogen Economy NR Index

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY ECPI GLOBAL ESG MED TECH **Legal Entity Identifier:** 213800L6P8XA39LXTE41

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective** : ___%

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **41.4%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The investment strategy selects issuers through:

- A negative screening applying exclusion criteria. This is applied with regard to issuers with a poor ESG profile and issuers that are in systematic violation of the UN Global Compact.

A positive screening using a selectivity approach. This involves evaluation of ESG performance of an issuer against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases, treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

The ECPI Global ESG Medical Tech (NR) Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product, and are based on the reference benchmark ESG methodology:

- The percentage of the financial product's portfolio compliant with the the reference benchmark business involvement exclusion criteria: **100%**

- The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology: **100%**

The average GHG intensity of the financial product's portfolio compared to the average GHG intensity of its investment universe: **21.4 vs 122.4**

- The average gender board diversity ratio of the financial product's portfolio compared to the average gender board diversity ratio of its investment universe: **35.8% vs 35.6%**

- The minimum percentage of the financial product's economic exposure investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions and/or any other extra financial criteria: **30.0%**

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **41.4%**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

* Source: BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

...and compared to previous periods ?

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's portfolio compliant with the the reference benchmark business involvement exclusion criteria	100%	100%	100%	100%	In line with the financial product's commitment
The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology	100%	100%	100%	100%	In line with the financial product's commitment
The average GHG intensity of the financial product's portfolio compared to the average GHG intensity of its investment universe	/	/	/	21.4 vs 122.4	In line with the financial product's commitment
-The average gender board diversity ratio of the financial product's portfolio compared to the average gender board diversity ratio of its investment universe	/	/	/	35.8% vs 35.6%	In line with the financial product's commitment

The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation	46.9%	47.9%	44.8%	41.4%	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The investment manager is using, as of the date of the prospectus, the BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus,to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

In addition, information on how the principal adverse impacts on sustainability factors have been considered over the year will be available in the annual report of the financial product

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
6. Energy consumption intensity per high impact climate sector
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

<u>Corporate voluntary indicators:</u>
<u>Environment</u>
4. Investments in companies without carbon emission reduction initiatives

Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations (SFDR: Sustainability-related disclosures - BNP Paribas)

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31.12.2025

Largest investments**	Sector	% Assets*	Country**
ALNYLAM PHARMACEUTICALS INC	Health Care	2.77%	United States
GENMAB	Health Care	2.71%	Denmark
BEONE MEDICINES AG	Health Care	2.57%	Switzerland
M3 INC	Health Care	2.52%	Japan
ARGENX	Health Care	2.45%	Netherlands
ABBVIE INC	Health Care	2.32%	United States
IDEXX LABORATORIES INC	Health Care	2.31%	United States
SMITH AND NEPHEW PLC	Health Care	2.30%	United Kingdom
IQVIA HOLDINGS INC	Health Care	2.28%	United States
HOYA CORP	Health Care	2.26%	Japan
THERMO FISHER SCIENTIFIC INC	Health Care	2.19%	United States
ESSILORLUXOTTICA SA	Health Care	2.18%	France
RESMED INC	Health Care	2.07%	United States
AGILENT TECHNOLOGIES INC	Health Care	2.05%	United States
GRIFOLS SA CLASS A	Health Care	2.04%	Spain

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

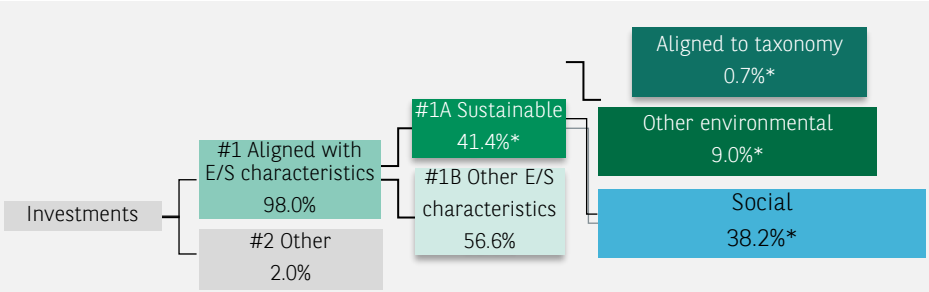

What was the asset allocation ?

Asset allocation describes the share of investments in specific assets.

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 98.0%.

The proportion of sustainable investments of the financial product is 41.4%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

- *In which economic sectors were the investments made ?*

Sectors (Level 2)	% Asset
Health Care Equipment & Services	52.06%
Pharmaceuticals Biotechnology & Life Sciences	47.02%
Cash	0.92%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?

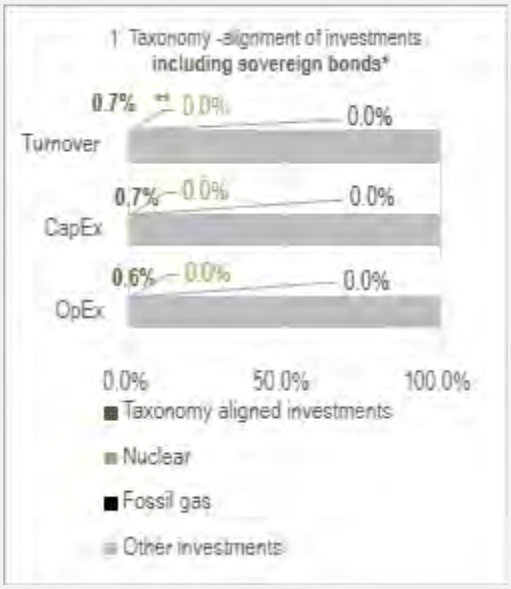

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No:

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2022*	0.0%	/	/
2023**	0.0%	/	/
2024***	0.1%	0.4%	0.3%
2025***	0.7%	0.7%	0.6%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
***Figures reported in 2024 and 2025 are expressed as a quaterly weighted average based on the AUM.

The proportion of taxonomy-aligned economic activities in CapEx or OpEx in 2022 and 2023 are not disclosed given the current level of data at the disposal of the management company related to such information.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **9.0%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **38.2%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as

companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product shall comply with the eligible stock criteria by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

- The financial product shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.

- The financial product's investment universe of the investment strategy, as defined in the Prospectus, shall be reduced by a minimum of 30% due to exclusion of securities with low ESG score and/or sector exclusions and/or other extra-financial criteria.

- The financial product's investment universe of the investment strategy shall follow the thematic diversification criteria (Biotechnology, Life Sciences Tools & Services, Health Care Equipment & Suppliers, Health Care Technology).

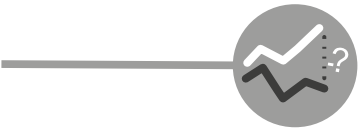

- The financial product shall have the weighted average GHG intensity of its portfolio lower than the weighted average GHG intensity of its investment universe.

- The financial product shall have the gender board diversity ratio of its portfolio higher than the weighted average gender board diversity ratio of its investment universe.

- The financial product shall invest at least 30% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What were the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

  There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

  In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNP Paribas Asset Management France

How did this financial product perform compared to the reference benchmark?

The ECPI Global ESG Medical Tech (NR) Index (Bloomberg: GALPHMTN index) has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: www.ecpigroup.com.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*".

How did this financial product perform compared with the reference benchmark?

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

How did this financial product perform compared with the broad market index?

	GHG emissions[1]	ESG score[1]
Financial product	21.4	62.2
Broad market index[2]	122.4	61.6

(1) GHG emissions is calculated as the sum, for each GHG emissions of the investee company's (for the relevant scope), weighted by the ratio of the current value of the investment to the investee company's entreprise value. The ghg is expressed in tons of CO2 equivalent per million euros of entreprise value.

(2) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) The ECPI Global ESG Medical Tech (NR) Index

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY ESG ENHANCED EMU **Legal Entity Identifier: : 213800DLBVMQH33PCS16**

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

- ☐ Yes
- ☒ No

- ☐ It made **sustainable investment with an environmental objective**: ___%
  - ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **72.4%** of sustainable investments
  - ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
  - ☒ with a social objective
- ☐ It made **sustainable investments with a social objective** : ___%
- ☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using the methodology of the index provider. As such, the product is exposed to issuers that demonstrate superior or improve environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

Environmental: energy efficiency, reduction of emissions of greenhouse gases, treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health

and safety, diversity)

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights.

The exclusion criteria are applied with regard to issuers that are in violation of international norms andconvention, or operate in sensitive sectors as defined by external data providers.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable, in collaboration with BNP Paribas Asset Management's Sustainability Centre.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

The weight of each of the three pillars, E, S and G, is respectively of minimum 20% in the scoring framework

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy; **100%**

- The percentage of the financial product's portfolio covered by the ESG analysis based on the ESG internal proprietary methodology; **100%**

- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectuse: **70.1 vs 65.1 (MSCI EMU (EUR) NR)**

-The weighted average carbon footprint of the portfolio compared to the weighted average carbon foortprint of its investment universe.: **27.3 vs 63.7**

- The percentage of the financial product's portfolio invested in 'sustainable investments ' as defined in Article 2 (17) of SFDR.**72.4%**

...and compared to previous periods ?

Non applicable for the first periodic report.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

As of the date of the prospectus, the financial product applies synthetic replication. Consequently, the sustainable investments to which the financial product is exposed and described below are the ones of the underlying securities of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least

one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Centre following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH ' principle) and should follow good governance practices. BNPP AM uses its proprietary methodology and/or relies on information provided by the reference benchmark administrator to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH principle). In this respect, for such sustainable investments, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights. Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH principle). In this respect, for such sustainable investments, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the "3Es" (Energy transition, environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts indicators are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions

2. Carbon footprint

3. GHG intensity of investee companies

4. Exposure to companies active in the fossil fuel sector

5. Share of non-renewable energy consumption and production

6. Energy consumption intensity per high impact climate sector

7. Activities negatively affecting biodiversity sensitive areas

8. Emissions to water

9. Hazardous waste ratio

10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

12. Unadjusted gender pay gap

13. Board gender diversity

14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

4. Lack of a supplier code of conduct

9. Lack of a human rights policy

Sovereign mandatory indicators

15. GHG intensity

16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations. (https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF)

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product investment strategy is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights

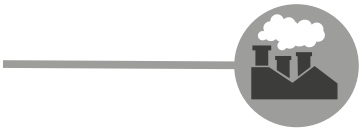

This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a "watch list"monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions

2. Carbon footprint

3. GHG intensity of investee companies

4. Exposure to companies active in the fossil fuel sector

5. Share of non-renewable energy consumption and production

6. Energy consumption intensity per high impact climate sector

7. Activities negatively affecting biodiversity sensitive areas

8. Emissions to water

9. Hazardous waste ratio

10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

12. Unadjusted gender pay gap

13. Board gender diversity

14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

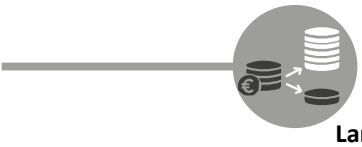

4. Investments in companies without carbon emission reduction initiatives

Social

4. Lack of a supplier code of conduct

9. Lack of a human rights policy

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations. (https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF)

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31.12.2025

Largest investments**	Sector	% Assets*	Country**
ASML HOLDING NV	Information	5.94%	Netherlands
SIEMENS N AG N	Industrials	4.82%	Germany
SAP	Information Technology	3.69%	Germany
SCHNEIDER ELECTRIC	Industrials	2.68%	France
LVMH	Consumer Discretionary	2.64%	France
UNICREDIT	Financials	2.51%	Italy
IBERDROLA SA	Utilities	2.46%	Spain
BANCO SANTANDER SA	Financials	2.46%	Spain
ALLIANZ	Financials	2.39%	Germany
INTESA SANPAOLO	Financials	2.04%	Italy
AXA SA	Financials	1.93%	France
DEUTSCHE TELEKOM N AG N	Communication	1.87%	Germany
SIEMENS ENERGY N AG	Industrials	1.80%	Germany
SANOFI SA	Health Care	1.78%	France
BANCO BILBAO VIZCAYA ARGENTARIA SA	Financials	1.66%	Spain

Source of data: BNP Paribas Asset Management,calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

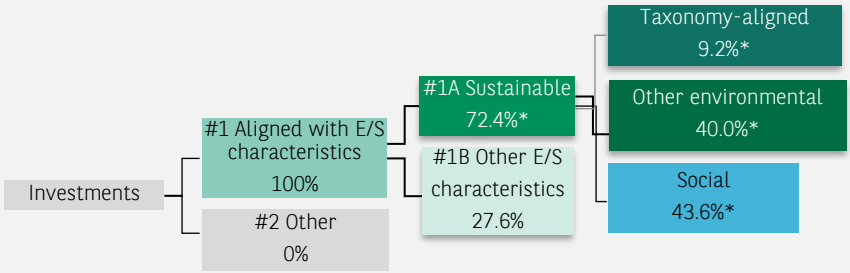

What was the asset allocation ?

Asset allocation describes the share of investments in specific assets.

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 100%.

The proportion of sustainable investments of the financial product is 72.4%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

Sectors (Level 2)	% Asset
Banks	18.25%
Capital Goods	15.29%
Insurance	8.61%
Semiconductors & Semiconductor Equipment	7.99%
Utilities	7.16%
Consumer Durables & Apparel	5.12%
Software & Services	5.10%
Pharmaceuticals Biotechnology & Life Sciences	4.79%
Health Care Equipment & Services	3.88%
Telecommunication Services	3.53%
Automobiles & Components	3.00%
Food Beverage & Tobacco	2.80%

Materials	2.47%
Household & Personal Products	2.10%
Transportation	1.89%
Equity Real Estate Investment Trusts (REITs)	1.69%
Consumer Services	1.38%
Financial Services	1.27%
Commercial & Professional Services	1.09%
Consumer Discretionary Distribution & Retail	0.97%
Media & Entertainment	0.86%
Technology Hardware & Equipment	0.72%
Consumer Staples Distribution & Retail	0.02%
Cash	0.01%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

  ☐ Yes:

  ☐ In fossil gas ☐ In nuclear energy

  ☒ No:

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- *What was the share of investments made in transitional and enabling activities?*

  The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

- *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?*

  Non applicable for the first periodic report

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **48.0%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

Socially sustainable investments represent **43.6%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product excludes companies violating international norms, exposed to tobacco or controversial weapons, as well as companies active in sectors with possible negative impacts on the climate in accordance with the exclusion criteria defined in the Article 12. 1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission. The details on how the exclusions are applied, depending on the asset classes, are available on our website (https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ section « PAB exclusions for ESMA Guidelines »).

- -The financial product complies, as part of its investment policy, with the list of exclusion criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ . As the financial product is a passively-managed ETF, the implementation of exclusions depends on the index provider's own ESG data and methodology.

- - The GHG intensity of the investee companies in portfolio is lower than that of the extra-financial investment universe (PAI 3).

-

- The portfolio's board gender diversity ratio is higher than that of the extra-financial investment universe (PAI 13).

- The financial product investment strategy shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be In violation of international norms, or to cause unacceptable harm to society and/or the environment..

  More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (Our sustainability policies and reports - BNP Paribas Asset Management - Corporate EN).

- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology.

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus, after eliminating at least 30% of securities, based on ESG scores and exclusions applied to the sub-fund.

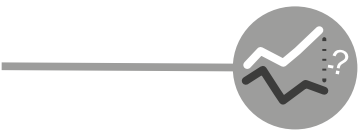

- The financial product shall have the weighted average carbon footprint of its portfolio lower than the weighted average carbon footprint of its investment universe

- The financial product shall have the weighted average greenhouse gas (GHG) intensity of its investment strategy portfolio lower than the weighted average greenhouse gas (GHG) intensity of its investment universe.

- The financial product shall invest at least 60% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "*What were the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives*" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

  There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY ESG Enhanced EUR Corp Bond **Legal Entity Identifier:** 213800PJ9ZYPF822NM47

SUSTAINABLE INVESTMENT OBJECTIVE

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

- [x] Yes
- [ ] No

- [x] It made a **sustainable investment with an environmental objective: 99.7%***
  - [x] in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - [x] in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- [x] It made **sustainable investments with a social objective: 37.3%***
- [ ] It promoted **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it had a proportion of __ % of sustainable investments
  - [ ] with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - [ ] with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
  - [ ] with a social objective
- [ ] It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

To what extent was the sustainable investment objective of this financial product met?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main pat of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)

The financial product emphasises especially on green bonds that aims to be aligned in achieving the goals within the paris agreement.

The JPM ESG Green Social & Sustainability IG EUR Bond (NTR) Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How did the sustainability indicators perform?

Sustainability indicators measure how the sustainable objetives of this financial product are attained.

The following sustainability indicators are used to measure the attainment of the sustainable investment objective of the financial product and are based on the reference benchmark ESG methodology::

- The he percentage of the financial product's portfolio compliant with the RBC Policy; **100%**
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology : **100%**
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of SFDR.: **99.7%**
- The percentage of the financial product's portfolio EU Taxonomy aligned: **9.7%**

...and compared to previous periods ?

Indicator	2024*	2025*	Comment
The percentage of the financial product's portfolio compliant with the RBC Policy	100%	100%	In line with the financial product's commitment
The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology	100%	100%	In line with the financial product's commitment
The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of SFDR.:	98.8%	99.7%	In line with the financial product's commitment
The percentage of the financial product's portfolio EU Taxonomy aligned	7.9%	9.7%	In line with the financial product's commitment

* Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

How did the sustainable investments not cause significant harm to any sustainable investment objective?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR where these are relevant and material to the investment strategy, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process : RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality &

Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts indicators are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes. Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions :
- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment,
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and, governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues

- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations (SFDR: Sustainability-related disclosures - BNP Paribas)

What were the top investments of this financial product?

The list includes investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31.12.25

Largest investments	Sector	% Assets*	Country

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

What was the asset allocation ?

The proportion of the investments used to meet the sustainable investment objective in accordance with the binding elements of its investment strategy is **99.7%.**

Asset allocation describes the share of investments in specific assets

The category **#1 Sustainable** covers sustainable investments with environmental or social objectives.

The sub-category **#2 Not sustainable** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

In which economic sectors were the investments made ?

Sectors (level 2)	% Asset
Banking	29.6%
Health Care	9.6%
Consumer Discretionary Products	7.9%
Utilities	7.8%
Real Estate	6.7%
Industrial Products	6.0%
Industrial Services	5.1%
Telecommunications	5.1%
Insurance	4.9%
Consumer Staple Products	4.6%
Materials	4.1%
Financial Services	2.3%
Software & Tech Services	1.9%
Tech Hardware & Semiconductors	1.1%
Media	0.8%

Retail & Wholesale - Staples	0.7%
Cash	0.5%
Consumer Discretionary Services	0.5%
Retail & Whsle - Discretionary	0.5%
Renewable Energy	0.2%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Did the financial product invest in fossil gas and/or nuclear energy activities that comply with the EU Taxonomy [1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No:

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of: :

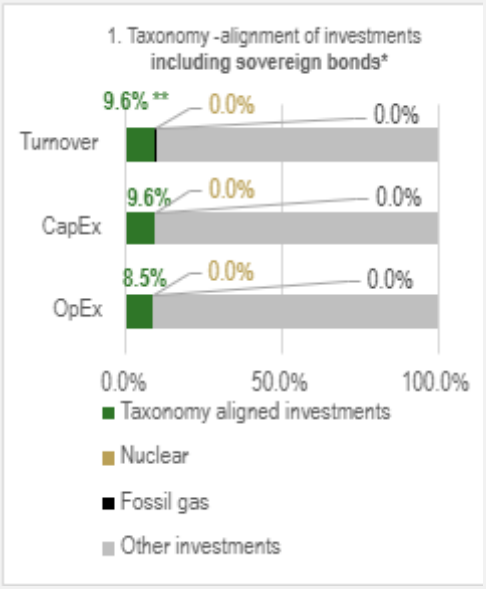

- **turnover** reflecting the share of revenue from green activities of investee compagnies
- **capital expenditure** (CapEx) showing the green investments made by investee companies e.g. for a transition to a green economy
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

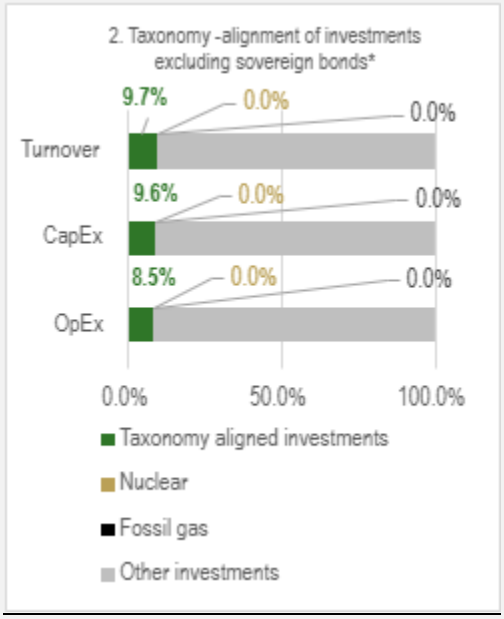

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

** *Real taxonomy aligned*

- *What is the share of investments in transitional and enabling activities?*

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

- *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?*

	Revenue	Capex	Opex
2024*	7.7%	7.2%	7.5%
2025*	9.7%	9.6%	8.5%

* Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

What was the share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **70.8%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **37.3%** of the financial product.

What investments were included under 'not sustainable', what was their purpose and were there any minimum environmental or social safeguards?

The "Not sustainable" investments are instruments which are used for liquidity and/or hedging purposes, such as cash, deposits and derivatives.

The investment manager will ensure that those investments are made while maintaining the sustainable investment objective of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to attain the sustainable investment objective during the reference period ?

- The financial product shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labor rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment;

  More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager Sustainability documents - BNPP AM Corporate English (bnpparibas-am com);

- The financial product excludes companies violating international norms, exposed to tobacco or controversial weapons, as well as companies active in sectors with possible negative impacts on the climate in accordance with the exclusion criteria defined in the Article 12. 1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission. The details on how the exclusions are applied, depending on the asset classes, are available on our website (https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48- 990be2616498/ – section « PAB exclusions for ESMA Guidelines »).

- The financial product complies, as part of its investment policy, with the list of exclusion criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https://docfinder.bnpparibas-am.com/api/files/2895a45abb7a-44f6-8e48-990be2616498/ .

- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the proprietary ESG methodology. The weight of each of the three pillars, E, S and G, is respectively of minimum 20% in the scoring framework.

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus, after eliminating at least 30% of securities, based on ESG scores and exclusions applied to the sub-fund.

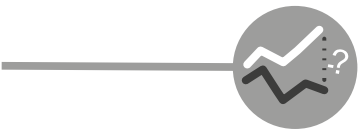

- The financial product shall invest at least 95% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus

- The financial product's shall invest at least 1% of its assets in companies "EU Taxonomy Aligned".

- The portfolio's board gender diversity ratio is higher than that of the extra-financial investment universe (PAI 13)

- The GHG intensity of the investee companies in portfolio is lower than that of the extrafinancial investment universe (PAI 3)

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference sustainable benchmark?

No reference benchmark has been designated for the purpose of meeting the sustainable investment objective of the financial product.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective

- *How does the reference benchmark differ from a broad market index?*

Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable objective?*

Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

Not applicable.

- *How did this financial product perform compared with the broad market index?*

Not applicable.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS Easy BNP PARIBAS EASY ESG Enhanced EUR Corp Bond December 2027

Legal Entity Identifier: .213800IL8WUJBKEBOY05

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective**: ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **60.1%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It made **sustainable investments with a social objective** : ___%

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental social and governance practices.

Corporate issuers

The investment strategy selects corporate issuers with the best ESG practices within their sector of activity through:

The positive screening using a selectivity approach. This involves evaluation of ESG performance of an issuer against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The negative screening applying exclusion criteria with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution

- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital

- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.
No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The percentage of the portfolio compliant with the RBC Policy and/or the BNP Paribas Group's sensitive countries framework; **100%**
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology : **100%**
- The minimum percentage of the financial product's investment universe reduction until the Final Year (as defined in the Prospectus) due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC Policy and/or other extra-financial criteria: **20.0%**

- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the prospectus : 65.6 vs 59.5 **(Bloomberg Euro Corporate December 2027 Maturity (EUR) RI)**

- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation: 60.1%

...and compared to previous periods ?

Indicator	2024*	2025*	Comment
The percentage of the portfolio compliant with the RBC Policy and/or the BNP Paribas Group's sensitive countries framework	100%	100%	In line with the financial product's commitment
The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology	100%	100%	In line with the financial product's commitment
he minimum percentage of the financial product's investment universe reduction until the Final Year (as defined in the Prospectus) due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC Policy and/or other extra-financial criteria	20%	20%	In line with the financial product's commitment
The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the prospectus	64.2 vs 59.2	65.6 vs 59.5	In line with the financial product's commitment
The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation	55.7%	60.1%	In line with the financial product's commitment

*Figures reported in 2024 and 2025 are expressed as a quarterly weighted based on the AUM.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure,

sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account all the principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process : RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performanceindicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the investment manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and the construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es"(Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support all investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Policy, Engagement and Voting Policy and include the following:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;

- In case of equity holings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues.

- Ensuring all securities included in the portfolio have supportive ESG research.

- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

12. Unadjusted gender pay gap

13. Board gender diversity

14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

4. Lack of a supplier code of conduct

9. Lack of a human rights policy

More detailed information on the manner in which BNPP AM considers principal adverse impacts of investment decisions on sustainability factors taking due account of the size, the nature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31.12.2025

Largest investments**	Sector	% Assets*	Country**
INTERNATIONAL BUSINESS MACHINES CORP 1.25 PCT 29-JAN-2027	Technology	1.73%	United States

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

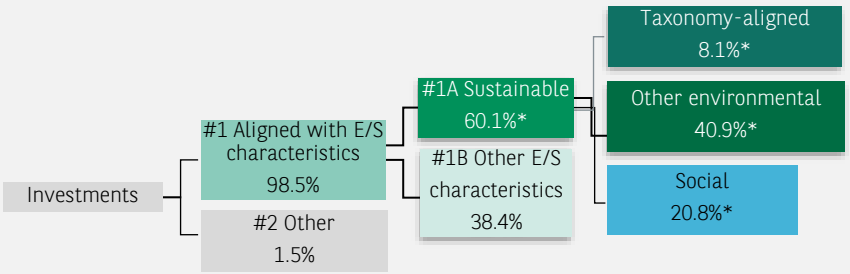

What was the asset allocation ?

Asset allocation describes the share of investments in specific assets.

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 98.5%.

The proportion of sustainable investments of the financial product is 60.1%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

Sectors (Level 2)	% Asset
Banking	28.4%
Consumer Discretionary Products	11.2%
Utilities	8.0%
Industrial Services	7.4%
Health Care	7.1%
Industrial Products	5.6%
Financial Services	4.6%
Materials	4.6%
Telecommunications	4.6%
Real Estate	4.5%

Consumer Staple Products	3.4%
Insurance	2.3%
Cash	1.9%
Software & Tech Services	1.7%
Retail & Whsle - Discretionary	1.2%
Media	1.2%
Consumer Discretionary Services	1.2%
Retail & Wholesale - Staples	1.2%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, and it did not do so.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

☐ Yes:

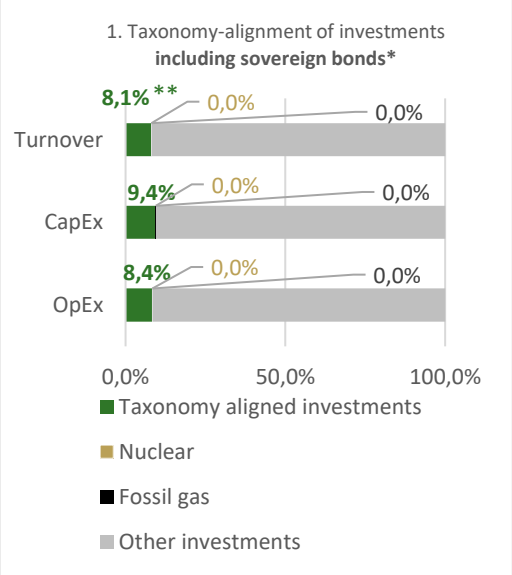

☐ In fossil gas ☐ In nuclear energy

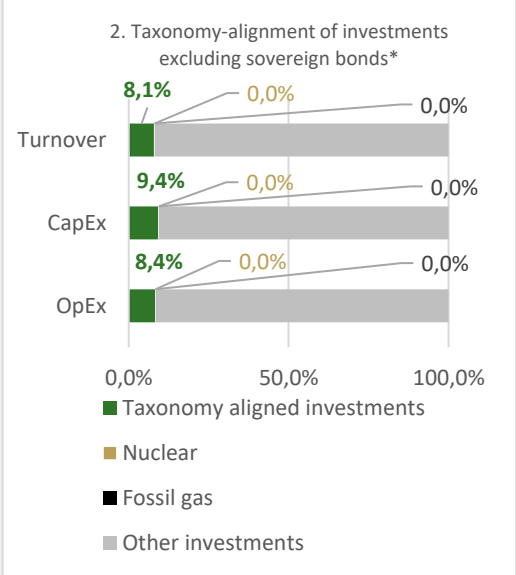

☒ No:

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2024*	7.8%	8.3%	7.6%
2025*	8.1%	9.4%	8.4%

* Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **40.9%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **20.8%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product excludes companies violating international norms, exposed to tobacco or controversial weapons, as well as companies active in sectors with possible negative impacts on the climate in accordance with the exclusion criteria defined in the Article 12. 1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission. The details on how the exclusions are applied, depending on the asset classes, are available on our website (https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ section « PAB exclusions for ESMA Guidelines »).

- The financial product shall comply with the eligible stock criteria by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment;

  More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager Sustainability documents - BNPP AM Corporate English (bnpparibas-am com);

- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology

- Until the Final Year as defined in the Prospectus, the financial product's investment universe shall be reduced by a minimum of 20% due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC Policy

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the prospectus.

- Until the Final Year as defined in the Prospectus, the financial product shall invest 30% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "*What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives*" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable

- *How did this financial product perform compared with the broad market index?*

  Not applicable

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY ESG ENHANCED EUR CORP BOND DECEMBER 2029 **Legal Entity Identifier:** 213800J541J4Z18HBS23

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **62.3%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It made **sustainable investments with a social objective** : ___%

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental social and governance practices.

Corporate issuers

The investment strategy selects corporate issuers with the best ESG practices within their sector of activity through:

The positive screening using a selectivity approach. This involves evaluation of ESG performance of an issuer against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The negative screening applying exclusion criteria with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution

- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital

- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy and/or the BNP Paribas Group's sensitive countries framework: **100%**

- The percentage of the portfolio covered by ESG analysis based on the ESG internal proprietary methodology: **100%**

- The minimum percentage of the financial product's investment universe reduction until the Final Year (as defined in the Prospectus) due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC Policy and/or other extra-financial criteria: **20%**

- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe: **67.4 vs 60.7** (Bloomberg Euro Corporate December 2029 Maturity (EUR) RI)

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **62.3%**

- *...and compared to previous periods ?*

Indicator	2024*	2025*	Comment
The percentage of the portfolio compliant with the RBC Policy and/or the BNP Paribas Group's sensitive countries framework	100%	100%	In line with the financial product's commitment
The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology	100%	100%	In line with the financial product's commitment
The minimum percentage of the financial product's investment universe reduction until the Final Year (as defined in the Prospectus) due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC Policy and/or other extra-financial criteria	20%	20%	In line with the financial product's commitment
The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the prospectus	65.2 vs 60.1	67.4 vs 60.7	In line with the financial product's commitment
The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation	55.0%	62.3%	In line with the financial product's commitment

*Figures reported in 2024 and 2025 are expressed as a quarterly weighted based on the AUM.

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives

Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product investment strategy is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a "watch list" monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the investment manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and the construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es"(Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support all investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Policy, Engagement and Voting Policy and include the following:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;

- In case of equity holings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues.

- Ensuring all securities included in the portfolio have supportive ESG research.

- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations (SFDR: Sustainability-related disclosures - BNP Paribas)

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31.12.2025

Largest investments**	Sector	% Assets*	Country**
VOLKSWAGEN FINANCIAL SERVICES AG 3.63 PCT 19-MAY-2029	Consumer	1.00%	Germany
LVMH MOET HENNESSY LOUIS VUITTON 3.25 PCT 07-SEP-2029	Consumer Discretionary	1.00%	France

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

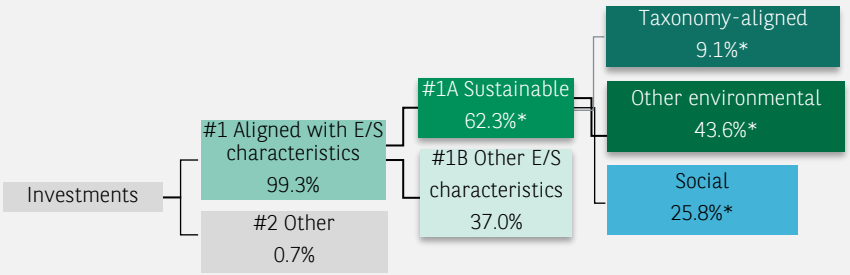

Asset allocation describes the share of investments in specific assets.

What was the asset allocation ?

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 99.3%.

The proportion of sustainable investments of the financial product is 62.3%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

Sectors (Level 2)	% Asset
Banking	21.3%
Consumer Discretionary Products	9.7%
Consumer Staple Products	8.2%
Health Care	8.1%
Utilities	7.5%
Real Estate	7.0%
Industrial Products	6.8%
Industrial Services	5.7%
Financial Services	5.0%
Telecommunications	4.7%
Materials	3.7%
Media	2.5%
Insurance	2.5%
Software & Tech Services	2.5%
Tech Hardware & Semiconductors	1.5%
Retail & Wholesale - Staples	1.0%
Cash	1.0%
Consumer Discretionary Services	0.5%
Renewable Energy	0.4%
Retail & Whsle - Discretionary	0.3%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

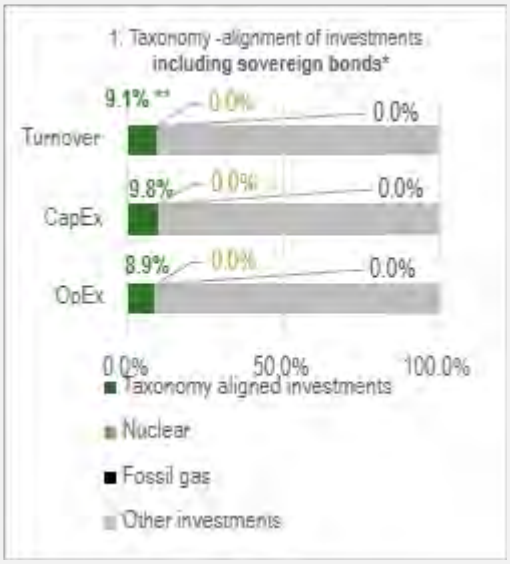

☒ No:

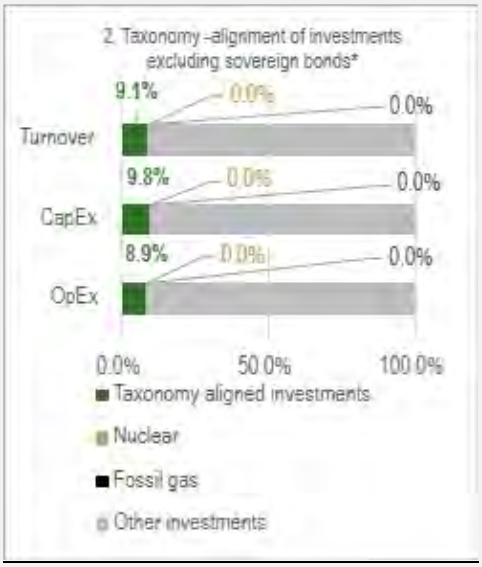

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

- *What was the share of investments made in transitional and enabling activities?*

  The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

- *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?*

	Revenue	Capex	Opex
2024*	8.6%	8.9%	8.5%
2025*	9.1%	9.8%	8.9%

* Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **43.6%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European

Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **25.8%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product excludes companies violating international norms, exposed to tobacco or controversial weapons, as well as companies active in sectors with possible negative impacts on the climate in accordance with the exclusion criteria defined in the Article 12. 1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission. The details on how the exclusions are applied, depending on the asset classes, are available on our website (https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ section « PAB exclusions for ESMA Guidelines »).

  - The financial product shall comply with the eligible stock criteria by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

  More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology.

- Until the Final Year as defined in the Prospectus, the financial product's investment universe shall be reduced by a minimum of 20% due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC Policy.

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus.

- Until the Final Year as defined in the Prospectus, the financial product shall invest 30% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

  There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

  In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY ESG Enhanced EUR Corp Bond December 2032 **Legal Entity Identifier:** 213800D2PA9FB6KN2C46

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investment with an environmental objective:** ___%	☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **62.0%** of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective** : ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental social and governance practices.

Corporate issuers

The investment strategy selects corporate issuers with the best ESG practices within their sector of activity through:

The positive screening using a selectivity approach. This involves evaluation of ESG performance of an issuer against a combination of environmental, social and governance factors which include but are not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The negative screening applying exclusion criteria with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Sovereign issuers

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution

- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital

- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the portfolio compliant with the RBC Policy and/or the BNP Paribas Group's sensitive countries framework: **100%**

- The percentage of the portfolio covered by ESG analysis based on the ESG internal proprietary methodology: **100%**

- The minimum percentage of the financial product's investment universe reduction until the Final Year (as defined in the Prospectus) due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC Policy and/or other extra-financial criteria: **20%**

- The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe: **67.0 vs 61.0 (Bloomberg Euro Corporate December 2032 Maturity (EUR) RI)**

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **62.0%**

- *...and compared to previous periods ?*

Indicator	2024*	2025*	Comment
The percentage of the portfolio compliant with the RBC Policy and/or the BNP Paribas Group's sensitive countries framework	100%	100%	In line with the financial product's commitment
The percentage of the portfolio covered by the ESG analysis based on the ESG internal proprietary methodology	100%	100%	In line with the financial product's commitment
The minimum percentage of the financial product's investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per extra financial criteria	20%	30%	In line with the financial product's commitment
The weighted average ESG score of the portfolio compared to the weighted average ESGscore of its investment universe, as defined in the Prospectus	28.3 vs 73.9	67.0 vs 61.0	In line with the financial product's commitment
The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation	62%	62.0%	In line with the financial product's commitment

* Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The investment manager is using, as of the date of the prospectus, the BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus,to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in

case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives

Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product investment strategy is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

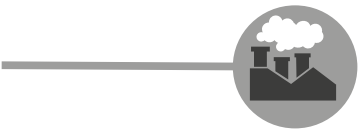

This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an "exclusion list" and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a "watch list" monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the investment manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and the construction of the portfolio

with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es"(Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support all investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Policy, Engagement and Voting Policy and include the following:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;

- In case of equity holings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues.

- Ensuring all securities included in the portfolio have supportive ESG research.

- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations (SFDR: Sustainability-related disclosures - BNP Paribas)

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31/12/2025

Largest investments**	Sector	% Assets*	Country**
BANCO SANTANDER SA 3.50 PCT 02-OCT-2032	Financials	1.77%	Spain
CELLNEX FINANCE COMPANY SA 2.00 PCT 15-SEP-2032	Industrials	1.59%	Spain
VINCI SA 3.38 PCT 17-OCT-2032	Industrials	1.52%	France
ABN AMRO BANK NV 3.00 PCT 01-JUN-2032	Financials	1.49%	Netherlands
INTERNATIONAL BUSINESS MACHINES CORP 0.65 PCT 11-FEB-2032	Technology	1.43%	United States
DEUTSCHE POST AG 1.00 PCT 20-MAY-2032	Industrials	1.35%	Germany
VOLKSWAGEN INTERNATIONAL FIN NV 1.25 PCT 23-SEP-2032	Consumer	1.29%	Netherlands
BNP PARIBAS SA 0.63 PCT 03-DEC-2032	Financials	1.23%	France
MERCEDES-BENZ INTERNATIONAL FINANCE BV 3.25 PCT 10-JAN-2032	Consumer Discretionary	1.14%	Netherlands
UPJOHN FINANCE BV 1.91 PCT 23-JUN-2032	Health Care	1.13%	Netherlands

SOCIETE GENERALE SA 4.25 PCT 16-NOV-2032	Financials	1.06%	France

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

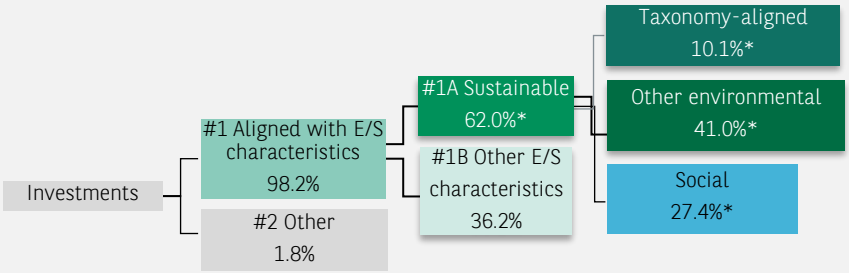

What was the asset allocation ?

Asset allocation describes the share of investments in specific assets.

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 98.2%.

The proportion of sustainable investments of the financial product is 62.0%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

Sectors (level 2)	% Asset
Banking	16.7%
Health Care	11.1%
Industrial Services	9.3%
Real Estate	8.0%
Industrial Products	7.9%
Utilities	7.8%
Materials	7.8%
Consumer Discretionary Products	6.6%
Consumer Staple Products	6.6%
Telecommunications	3.7%
Media	3.4%
Software & Tech Services	2.4%
Insurance	2.3%
Financial Services	1.8%
Cash	1.8%
Tech Hardware & Semiconductors	1.3%
Retail & Whsle - Discretionary	0.6%
Retail & Wholesale - Staples	0.5%
Renewable Energy	0.4%

Source of data: BNP Paribas Asset Management,calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No:

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

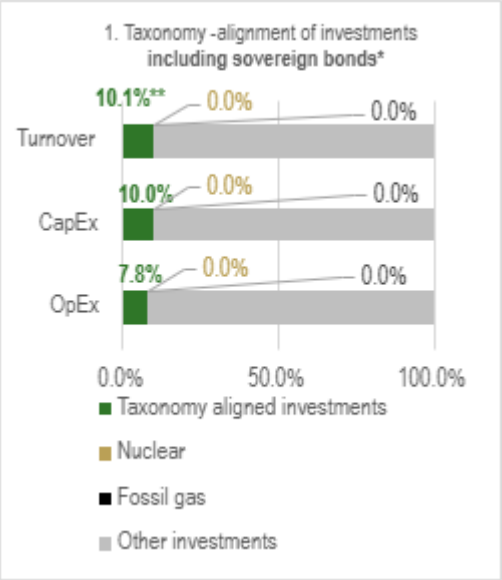

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

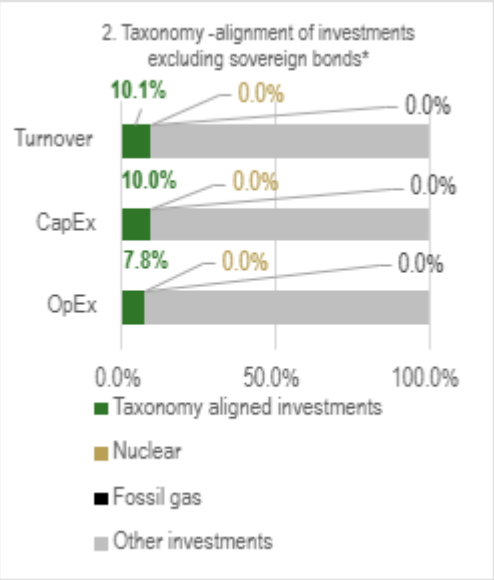

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2024*	10.4%	11.0%	9.1%
2025*	10.1%	10.0%	7.8%

* Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **41.0%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **27.4%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product excludes companies violating international norms, exposed to tobacco or controversial weapons, as well as companies active in sectors with possible negative impacts on the climate in accordance with the exclusion criteria defined in the Article 12. 1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission. The details on how the exclusions are applied, depending on the asset classes, are available on our website (https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ section « PAB exclusions for ESMA Guidelines »).

- The financial product shall comply with the eligible stock criteria by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

  More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology.

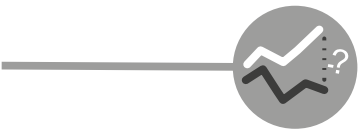

- Until the Final Year as defined in the Prospectus, the financial product's investment universe shall be reduced by a minimum of 20% due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC Policy.

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus.

- Until the Final Year as defined in the Prospectus, the financial product shall invest 30% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

  There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

  In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY ESG ENHANCED EUR GOVERNMENT BOND **Legal Entity Identifier: 213800YTVISLI3213D47**

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes	No
☐ It made **sustainable investment with an environmental objective**: ___%	☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **40.5%** of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It made **sustainable investments with a social objective** : ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental, social and governance practices.

The investment strategy selects sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using an internal Sovereign ESG methodology that focuses on measuring governments' efforts to produce and preserve assets, goods, and services with high ESG values, according to their level of economic development. This involves evaluation of a country against a combination of environmental, social and governance factors, which include but not limited to

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution

- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital

- Governance: business rights, corruption, democratic life, political stability, security

BNP Paribas Asset Management's Global Sustainability Strategy places a strong emphasis on combatting climate change. Therefore, given the importance of sovereigns in addressing climate change, the internal Sovereign ESG methodology includes an additional scoring component that captures the country's contribution to progress towards the net-zero goals set out in the Paris Agreement. This additional scoring component reflects countries' commitment to future targets balanced by their current policies and their forward-looking physical climate risk exposure. It combines temperature alignment methodology for determining national contributions to climate change with an assessment of the laws and policies countries have in place for addressing climate change.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable. No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The percentage of the financial product's portfolio compliant with the BNP Paribas Group's controversial countries framework; **100%**
- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology : **100%**
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the prospectus : **67.1 vs 57.7 (JPM EMU Investment Grade Government (EUR) RI)**
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of SFDR: **40.5%**

...and compared to previous periods ?

Indicator	2024*	2025*	Comment
The percentage of the financial product's portfolio compliant with the BNP Paribas Group's controversial countries framework;	100%	100%	In line with the financial product's commitment
The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology;	100%	100%	In line with the financial product's commitment
The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus	67.2 vs 58.3	67.1 vs 57.7	In line with the financial product's commitment

The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of SFDR	36.3%	40.5%	In line with the financial product's commitment

* Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example

contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following

objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH principle). In this respect, for such sustainable investments, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the following sustainable investment pillars into its investment process. These pillars are set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers

The investment universe is periodically screened in order with a view to identify the severe controversies affecting countries subject to social violations or violations of fundamental human rights, as described in international treaties and conventions. The BNP Paribas Group framework defining the countries that are the subject of the controversies establishes investment restrictions on certain countries and/or activities related to money laundering risks and terrorist financing.

The investment manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The investment manager proprietary methodology for defining ESG scores for notably sovereign issuers or agencies includes the consideration of various mechanisms and indicators related to Greenhouse Gas intensity but not limited to:

- Environmental indicators (GHG per capita, CO2 emissions from the energy sector, CO2 emissions from industry, CO2 emissions from gas or fuel consumption, etc.);

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Commitments to reduce greenhouse gas emissions in order to be in line with the limit of a 2°C increase, with regard to Contributions defined at the National Level;

- Policies to address climate change themes Several measures and indicators related to social violations are integrated into the proprietary framework for defining ESG scores, including but not limited to:

- Labour and social protection (ratification or implementation in equivalent national legislation of the eight fundamental conventions identified in the International Labour Organization Declaration on Fundamental Principles and Rights at Work);

- Democratic life (responsibility, rule of law);

- Security (military expenditure, armed forces personnel, refugee population, etc.).

The result of this assessment may have an impact on valuation models as well as on the construction of the portfolio depending on the severity and importance of the identified negative impacts. Therefore, the management company takes into account the main negative impacts on sustainability throughout the investment process by relying on proprietary ESG ratings and the creation of a portfolio with an improved ESG profile compared to its invitial investment universe benchmark

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

The investment manager also actively engages with public policymakers, helping them shape the markets and the rules that guide and govern company behaviours, with a particular focus on corporate disclosure, climate policy and corporate governance.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts indicators are taken into account:

Sovereign mandatory indicators
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: *SFDR: Sustainability-related disclosures - BNP Paribas*

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers some principal adverse impacts on sustainability factors by systematically implementing the following sustainable investment pillars into its investment process. These pillars are set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The investment universe is periodically screened with a view to identify the severe controversies affecting countries subject to social violations or violations of fundamental human rights, as described in international treaties and conventions. The BNP Paribas Group framework defining the countries that are the subject of the controversies establishes investment restrictions on certain countries and/or activities related to money laundering risks and terrorist financing.

The investment manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The investment manager proprietary methodology for defining ESG scores for notably sovereign issuers or agencies includes the consideration of various mechanisms and indicators related to Greenhouse Gas intensity but not limited to:

- Environmental indicators (GHG per capita, CO2 emissions from the energy sector, CO2 emissions from industry, CO2 emissions from gas or fuel consumption, etc.);

- Commitments to reduce greenhouse gas emissions in order to be in line with the limit of a 2°C increase, with regard to Contributions defined at the National Level;

- Policies to address climate change themes
Several measures and indicators related to social violations are integrated into the proprietary framework for defining ESG scores, including but not limited to:

- Labour and social protection (ratification or implementation in equivalent national legislation of the eight fundamental conventions identified in the International Labour Organization Declaration on Fundamental Principles and Rights at Work);

- Democratic life (responsibility, rule of law);

- Security (military expenditure, armed forces personnel, refugee population, etc.).

The result of this assessment may have an impact on valuation models as well as on the construction of the portfolio depending on the severity and importance of the identified negative impacts. Therefore, the management company takes into account the main negative impacts on sustainability throughout the investment process by relying on proprietary ESG ratings and the creation of a portfolio with an improved ESG profile compared to its invitial investment universe benchmark.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

The investment manager also actively engages with public policymakers, helping them shape the markets and the rules that guide and govern company behaviours, with a particular focus on corporate disclosure, climate policy and corporate governance.
Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Sovereign mandatory indicators
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which BNPP AM considers principal adverse impacts of investment decisions on sustainability factors taking due account of the size, the nature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31/12/2025

Largest investments**	Sector	% Assets*	Country**
ITALY (REPUBLIC OF) 4.00 PCT 30-OCT-2031	Government	4.60%	Italy

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

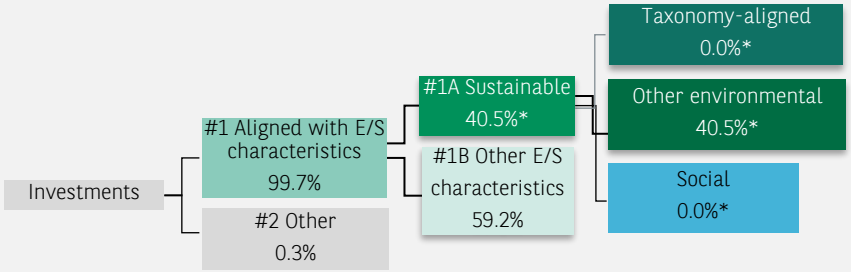

What was the asset allocation ?

Asset allocation describes the share of investments in specific assets.

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 99.7%.

The proportion of sustainable investments of the financial product is 40.5%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

Sectors (Level 2)	% Asset
National	99.7%
Cash	0.3%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, and it did not do so.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

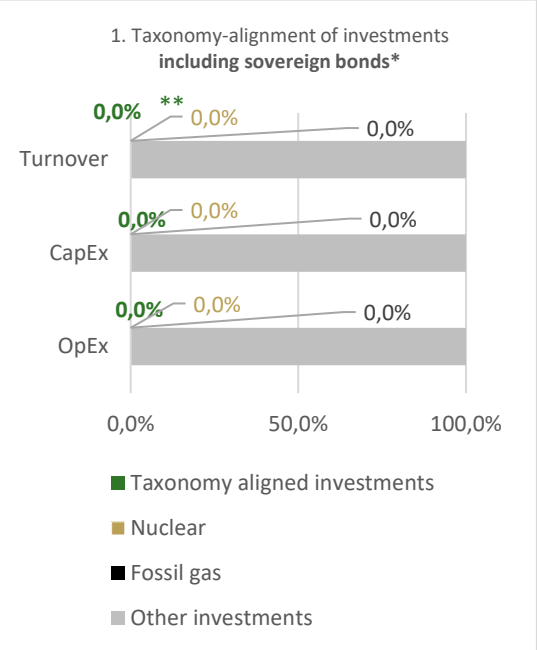

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

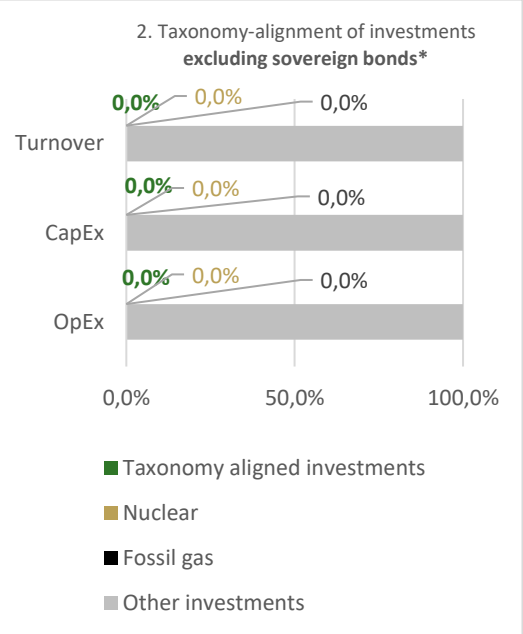

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No:

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

- *What was the share of investments made in transitional and enabling activities?*

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

- *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?*

	Revenue	Capex	Opex
2024**	0.0%	0.0%	0.0%
2025**	0.0%	0.0%	0.0%

* Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **40.5%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **0.0%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

In accordance with its investment strategy, the financial product does not invest in corporate issuers. As such, it cannot invest in companies in accordance with the article 12.1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission.

- The financial product invests in securities issued by eligible states following the conditions of the Central Labelling Agency (CLA) of the Towards Sustainability label as dated in the Prospectus

- The financial product shall comply with the BNP Paribas Group's sensitive countries framework

- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology;

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus;

- The financial product shall invest at least 30% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable e investment rategy guides vestment cisions based on ctors such as vestment jectives and risk erance. 7 investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus;

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager Sustainability documents - BNPP AM Corporate English (bnpparibas-am com);

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable

- *How did this financial product perform compared with the broad market index?*

  Not applicable

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY ESG Enhanced Europe

Legal Entity Identifier: .2138003814CKQ6R9QO24

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective** : ___%

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **67.2%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)

Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

The weight of each of the three pillars, E, S and G, is respectively of minimum 20% in the scoring framework

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy; **100%**
- The percentage of the financial product's portfolio covered by the ESG analysis based on the ESG internal proprietary methodology; **100%**
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus; **68.2 VS 61.8 (MSCI Europe (EUR) NR)**
- The weighted average carbon footprint of the portfolio compared to the weighted average carbon footprint of its investment universe as defined in the Prospectus. **26.2 VS 57.5 (MSCI Europe (EUR) NR)**
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of SFDR. **67.2%**

...and compared to previous periods ?

Indicator	2024*	2025*	Comment
The percentage of the financial product's portfolio compliant with the RBC Policy	100%	100%	In line with the financial product's commitment
The percentage of the portfolio covered by the ESG analysis based on the ESG internal proprietary methodology	100%	100%	In line with the financial product's commitment
The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus	67.2 VS 60.0	68.2 VS 61.8	In line with the financial product's commitment
The weighted average carbon footprint of the portfolio compared to the weighted average carbon footprint of its investment universe as defined in the Prospectus	28.0 VS 60.0	26.2 VS 57.5	In line with the financial product's commitment
The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation	66.9%	67.2%	In line with the financial product's commitment

* Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

As of the date of the prospectus, the financial product applies synthetic replication. Consequently, the sustainable investments to which the financial product is exposed and described below are the ones of the underlying securities of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary

methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account all the principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process : RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performanceindicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://group.bnpparibas/en/sfdr-sustainability-related-disclosures

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on

the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- 2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- 3- Engagement and voting policy, when applicable.

4- The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies

4. Exposure to companies active in the fossil fuel sector

5. Share of non-renewable energy consumption and production

6. Energy consumption intensity per high impact climate sector

7. Activities negatively affecting biodiversity sensitive areas

8. Emissions to water

9. Hazardous waste ratio

10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

12. Unadjusted gender pay gap

13. Board gender diversity

14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:

Environment

4. Investments in companies without carbon emission reduction initiatives

Social

4. Lack of a supplier code of conduct

9. Lack of a human rights policy

More detailed information on the manner in which BNPP AM considers principal adverse impacts of investment decisions on sustainability factors taking due account of the size, the nature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: Sustainability - BNPP AM Luxembourg private investor

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31/12/2025

Largest investments**	Sector	% Assets*	Country**
ASML HOLDING NV	Information Technology	3,19%	Netherlands
SIEMENS N AG N	Industrials	2,72%	Germany
NOVARTIS AG N	Health Care	2,64%	Switzerland
ASTRAZENECA PLC	Health Care	2,37%	United Kingdom
HSBC HOLDINGS PLC	Financials	2,29%	United Kingdom
ROCHE HOLDING PAR AG	Health Care	2,07%	Switzerland
SAP	Information Technology	1,93%	Germany
ABB LTD N	Industrials	1,52%	Switzerland
SCHNEIDER ELECTRIC	Industrials	1,43%	France
LVMH	Consumer Discretionary	1,39%	France
UBS GROUP AG	Financials	1,32%	Switzerland
UNICREDIT	Financials	1,31%	Italy
IBERDROLA SA	Utilities	1,29%	Spain
BANCO SANTANDER SA	Financials	1,25%	Spain
ALLIANZ	Financials	1,24%	Germany

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

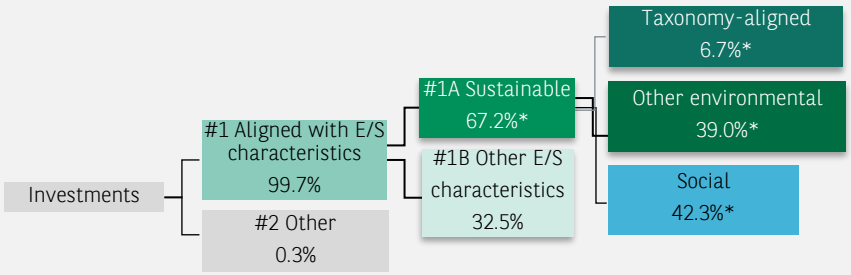

What was the asset allocation ?

Asset allocation describes the share of investments in specific assets.

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 99.7%.

The proportion of sustainable investments of the financial product is 67.2%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

Sectors (Level 2)	% Asset
Banks	15.88%
Pharmaceuticals Biotechnology & Life Sciences	12.74%
Capital Goods	12.45%
Insurance	7.53%
Utilities	5.19%
Materials	4.81%
Semiconductors & Semiconductor Equipment	4.27%
Food Beverage & Tobacco	4.14%
Consumer Durables & Apparel	3.78%
Household & Personal Products	3.55%

Financial Services	3.24%
Health Care Equipment & Services	2.94%
Software & Services	2.66%
Telecommunication Services	2.60%
Consumer Services	2.35%
Commercial & Professional Services	2.18%
Automobiles & Components	1.63%
Technology Hardware & Equipment	1.62%
Consumer Discretionary Distribution & Retail	1.56%
Transportation	1.46%
Equity Real Estate Investment Trusts (REITs)	1.08%
Media & Entertainment	0.84%
Real Estate Management & Development	0.77%
Consumer Staples Distribution & Retail	0.69%
Cash	0.05%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, and it did not do so.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

- ○ *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

  ☐ Yes:

  ☐ In fossil gas ☐ In nuclear energy

  ✖ No:

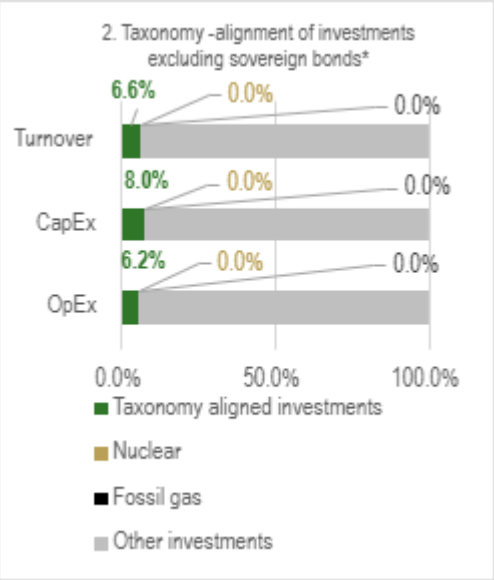

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2024*	5.4%	6.7%	5.2%
2025*	6.6%	8.0%	6.2%

* Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **39.0%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **42.3%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product excludes companies violating international norms, exposed to tobacco or controversial weapons, as well as companies active in sectors with possible negative impacts on the climate in accordance with the exclusion criteria defined in the Article 12. 1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission. The details on how the exclusions are applied, depending on the asset classes, are available on our website (https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ section « PAB exclusions for ESMA Guidelines »).

- -The financial product complies, as part of its investment policy, with the list of exclusion criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/

- The GHG intensity of the investee companies in portfolio is lower than that of the extra-financial investment universe (PAI 3)

- The portfolio's board gender diversity ratio is higher than that of the extra-financial investment universe (PAI 13).

- The financial product investment strategy shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be In violation of international norms, or to cause unacceptable harm to society and/or the environment.

- More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus.

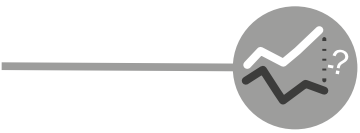

- The financial product shall have the weighted average carbon footprint of its portfolio at least 50% lower than the weighted average carbon footprint of its investment universe.

- The financial product shall have the weighted average GHG intensity of its portfolio lower than the weighted average GHG intensity of its investment universe

- The financial product investment strategy shall invest at least 60% of its assets in 'sustainable investments ' as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as 'sustainable investment ' are indicated in the above question 'What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives ' and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the financial product.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable

- *How did this financial product perform compared with the broad market index?*

  Not applicable

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY ESG Eurozone Biodiversity Leaders PAB **Legal Entity Identifier:** 213800FJMY39FZAAEN76

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It made **sustainable investment with an environmental objective:** ___%	☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **65.6%** of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It made **sustainable investments with a social objective** : ___%	☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The investment strategy selects issuers through:

- A negative screening applying exclusion criterio. This is applied with regard to issuers with a poor ESG profile and issuers that are in systematic violation of the UN Global Compact.
- A positive screening using a selectivity approach. This involves evaluation of ESG performance of an issuer against a combination of environmental, social and governance factors which include but not limited to:
    - Environmental: energy efficiency, reduction of emissions of greenhouse gases, treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

The Euronext ESG Eurozone Biodiversity Leaders PAB (NTR) Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The weightings of the Environmental (E), Social (S) and Governance (G) criteria in the ESG rating methodology of ISS ESG, which is Euronext's ESG score provider, have thresholds below 20% only on the Governance criterion. For more details on ISS ESG's methodology, please refer to the following document: https://www.issgovernance.com/file/products/iss-esg-corporate-rating-methodology.pdf

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product, and are based on the reference benchmark ESG methodology:

- The percentage of the financial product's portfolio compliant with the the reference benchmark eligible stock criteria taking into account sectorial and controversial policies: **100%**

- The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology: **100%**

- The minimum percentage of the financial product's universe reduction due to exclusion of securities with low ESG score and/or sector exclusions and/or any other extra financial criteria: **30%**

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **65.6%**

...and compared to previous periods ?

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's portfolio compliant with the the reference benchmark eligible stock criteria taking into account sectorial and controversial policies	100%	100%	100%	100%	In line with the financial product's commitment
The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology	100%	100%	100%	100%	In line with the financial product's commitment
The minimum percentage of the financial product's universe reduction due to exclusion of securities with low ESG score and/or sector exclusions and/or any other extra financial	20%	20%	20%	30%	In line with the financial product's commitment
The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation	63.9%	56.6%	54.8%	65.6%	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

   a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

   b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

   a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations (SFDR: Sustainability-related disclosures - BNP Paribas)

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31.12.2025

Largest investments**	Sector	% Assets*	Country**
ASML HOLDING NV	Information Technology	13.38%	Netherlands
LVMH	Consumer Discretionary	9.37%	France

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

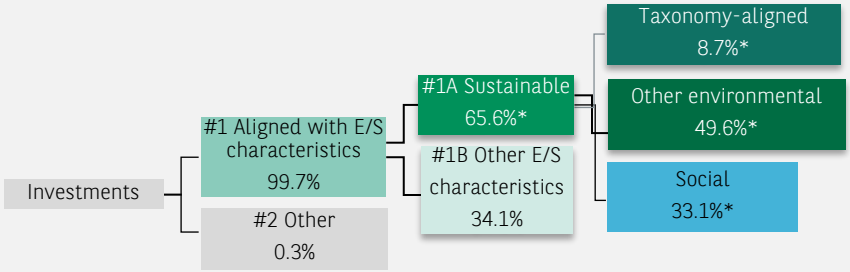

What was the asset allocation ?

Asset allocation describes the share of investments in specific assets.

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 99.7%.

The proportion of sustainable investments of the financial product is 65.6%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

Sectors (level 2)	% Asset
Semiconductors & Semiconductor Equipment	14,96%
Capital Goods	13,92%
Banks	10,29%
Consumer Durables & Apparel	9,37%
Household & Personal Products	7,93%

Consumer Services	0,05%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

- ○ *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

  ☐ Yes:

  ☐ In fossil gas ☐ In nuclear energy

  ✖ No:

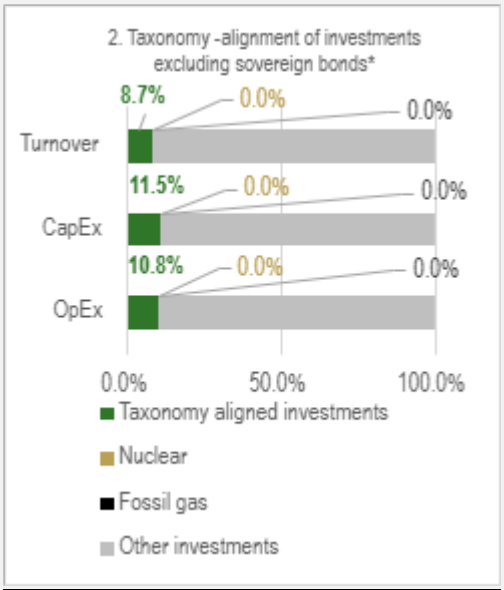

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2022*	2.8%	/	/
2023**	4.1%	/	/
2024***	7.1%	12.2%	8.5%
2025***	8.7%	11.5%	10.8%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the current level of data at the disposal of the management company at the time.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **49.6%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **33.1%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product excludes companies violating international norms, exposed to tobacco or controversial weapons, as well as companies active in sectors with possible negative impacts on the climate in accordance with the exclusion criteria defined in the Article 12. 1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission. The details on how the exclusions are applied, depending on the asset classes, are available on our website (https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ section « PAB exclusions for ESMA Guidelines »).

The financial product complies, as part of its investment policy, with the list of exclusion criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https//docfinder.bnpparibas-am com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ . As the financial product is a passively-managed ETF, the implementation of exclusions depends on the index provider's own ESG data and methodology.

- The GHG intensity of the investee companies in portfolio is lower than that of the extra-financial investment universe (PAI 3)

The percentage of companies of the financial product's portfolio without carbon emission reduction initiative is lower than that of its investment universe (Volontary Environmental PAI 4)

- The financial product shall comply with the eligible stock criteria by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

- The financial product shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.

- The financial product's investment universe of the investment strategy, as defined in the Prospectus, shall be reduced by a minimum of 30% due to exclusion of securities with low ESG score and/or sector exclusions and/or other extra-financial criteria.

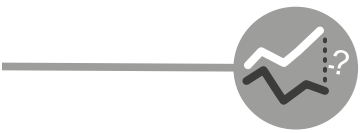

- The financial product shall have the weighted average GHG intensity of its portfolio at least 50% lower than the weighted average GHG intensity of its investment universe.

- The financial product shall achieve an annual decarbonization target of at least 7%.

- The financial product shall invest at least 40% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question *"What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives*" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

The Euronext ESG Eurozone Biodiversity Leaders PAB (NTR) Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: www.euronext.com.

- *How does the reference benchmark differ from a broad market index?*

  The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the

environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*".

- ***How did this financial product perform compared with the reference benchmark?***

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

- ***How did this financial product perform compared with the broad market index?***

	GHG emissions[1,2]	ESG score[2]
Financial product	72.1	65.4
Broad market index[3]	110.1	62.7

(1) GHG emissions is calculated as the sum, for each GHG emissions of the investee company's (for the relevant scope), weighted by the ratio of the current value of the investment to the investee company's entreprise valu.

(2) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) Euronext Eurozone 300 (EUR) NR

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY ESG LOW VOL US **Legal Entity Identifier:** 213800IQX66PWZ6MEE84

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ Yes ☒ No

☐ It made **sustainable investment with an environmental objective**: ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **47.1%** of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It made **sustainable investments with a social objective** : ___%

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using ESG external and/or internal proprietary methodology(ies). As such, the product is exposed to issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The investment strategy selects issuers through:

- A positive screening using a selectivity approach. This involves evaluation of Environmental, Social, and Governance (ESG) performance of an issuer against a combination of environmental, social and governance factors which include but not limited to :
  - Environmental: energy efficiency, reduction of emissions of greenhouse gases, treatment of waste;

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity);

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights.

- A negative screening applying exclusion criteria with regard to issuers that are in violation of international norms and convention, such as the UN Nations Global Compact principles and OECD Guidelines for Multinational Enterprises, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC) policy.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights, according to the Stewardship policy, where applicable.

In synthetic replication, engagement with issuers and exercise of voting rights, if any, are only applied for the Financing Assets underlying securities.

The BNP Paribas Low Vol US ESG (NTR) (Bloomberg: BNPIFELU index) has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's economic exposure compliant with the RBC policy: **100%**

- The percentage of the financial product's economic exposure covered by the ESG analysis based on external and/or ESG proprietary methodology(ies): **100%**

- The minimum percentage of the financial product's economic exposure investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC policy and/or any other extra financial criteria: **20%**

- The weighted average ESG score of the financial product's economic exposure compared to the weighted average ESG score of its investment universe: **59.1 vs 51.8 (S&P 500 (USD) NR)*.**

- The average carbon footprint of the financial product's reference benchmark economic exposure compared to the average carbon footprint of its investment universe: **26.3 vs 50.4 tCO_2 eq/EV (S&P 500 (USD) NR)*.**

- The percentage of the financial product's economic exposure in "sustainable investments" as defined in Article 2 (17) of SFDR: **47.1%**

* Source: BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

*Figures reported in 2022 were calculated on the closing date of the accounting year.
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

As of the date of the annual report, the financial product applies synthetic replication. Consequently, the sustainable investments to which the financial product is exposed and described below are the ones of the underlying securities of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned

with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

In synthetic replication, engagement with issuers and exercise of voting rights, if any, are only applied for the Financing Assets underlying securities.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity

14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicators
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions :

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

In synthetic replication, engagement with issuers and exercise of voting rights, if any, are only applied for the Financing Assets underlying securities.

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector

7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

What were the top investments of this financial product?

The financial product applies synthetic replication.
The top investments disclosed below are therefore twofold:

- The assets physically held at the level of the financial product
- The assets of the reference benchmark underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

Assets physically held at the level of the financial product:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31.12.2025

Largest investments**	Sector	% Assets*	Country**
NETFLIX INC	Communication Services	8.80%	United States
VERTEX PHARMACEUTICALS INC	Health Care	6.11%	United States
AKAMAI TECHNOLOGIES INC	Information Technology	5.85%	United States

* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

What was the asset allocation ?

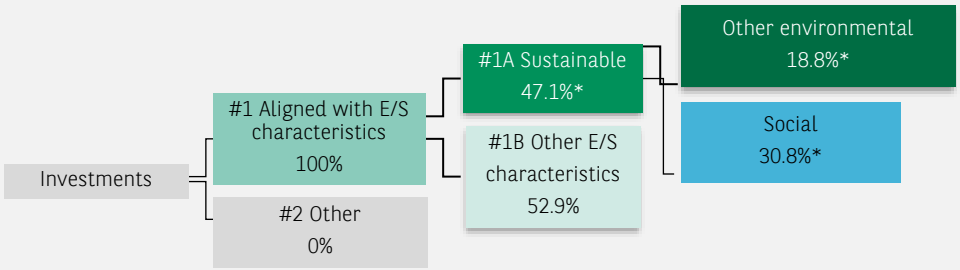

Asset allocation describes the share of investments in specific assets.

As of the date of the annual report, the financial product applies synthetic replication. Consequently, the asset allocation for this financial product is the ones of the underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 100%.

The proportion of sustainable investments of the financial product is 47.1%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

The financial product applies synthetic replication.
The top investments disclosed below are therefore twofold:

- The assets physically held at the level of the financial product
- The assets of the reference benchmark underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

Assets physically held at the level of the financial product:

Sectors (level 2)	% Asset
Software & Services	32,45%
Media & Entertainment	12,63%
Health Care Equipment & Services	12,50%
Pharmaceuticals Biotechnology & Life Sciences	10,53%
Consumer Services	7,89%
Cash	5,58%
Automobiles & Components	5,13%
Technology Hardware & Equipment	4,59%
Financial Services	4,35%
Banks	4,34%

Source of data: BNP Paribas Asset Management, calculated on 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

Assets of the reference benchmark underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy:

Sectors	% Asset
Information Technology	33,0%
Industrials	16,3%
Financials	15,5%
Health Care	9,2%
Communication Services	6,3%
Consumer Staples	6,1%
Consumer Discretionary	4,8%
Real Estate	2,8%
Utilities	2,5%
Materials	2,0%
Energy	1,5%

Source of data: BNP Paribas Asset Management, calculated on 31/12/2025.
The sector breakdown is based on the underlying portfolio data of the investment strategy and is based on the transaction date.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, and it did not do so.

○ *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

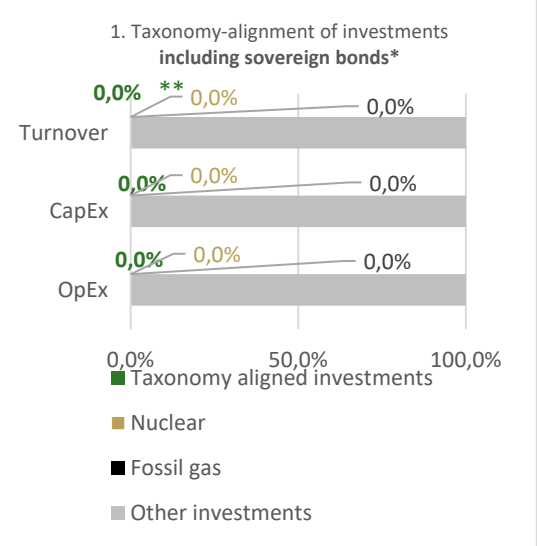

☒ No:

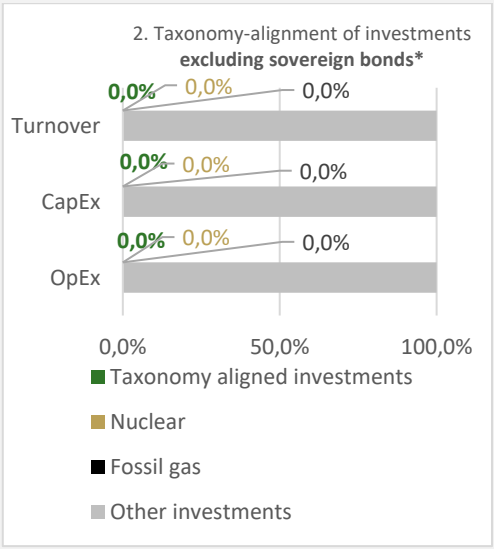

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2022*	0.0%	/	/
2023**	0%	/	/
2024***	0%	0%	0%
2025***	0%	0%	0%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the current level of data at the disposal of the management company at the time.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **18.8%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **30.8%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product investment strategy shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be In violation of international norms, or to cause unacceptable harm to society and/or the environment.

  More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)

- The financial product investment strategy shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the proprietary and/or external ESG methodology.

- The financial product's investment universe of the investment strategy shall be reduced by a minimum of 20% due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC Policy and/or other extra-financial criteria.

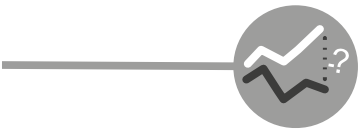

- The financial product shall have the weighted average ESG score of its investment strategy portfolio higher than the weighted average ESG score of its investment universe.

- The financial product shall have the weighted average carbon footprint of its investment strategy portfolio lower than the weighted average carbon footprint of its investment universe.

- The financial product shall invest at least 30% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR and as disclosed in the asset allocation below. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus

  There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance, between two strategy reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the reference benchmark administrator rules.

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

The BNP Paribas Low Vol US ESG (NTR) (Bloomberg: BNPIFELU index) has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: https://indx.bnpparibas.com/nr/FELETR.pdf.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "How did the sustainability indicators perform?"

How did this financial product perform compared with the reference benchmark?

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

How did this financial product perform compared with the broad market index?

	Carbon footprint (tCO2 eq/EV) [1,2]	ESG score[2]
Financial product	26.3	59.1
Broad market index[3]	50.4	51.8

(1) The carbon footprint is the sum of each carbon emission divided by its simplified enterprise value, multiplied by the weight in the portfolio. Carbon emissions represent the sum of a company's scope 1 (direct emissions from installations) and scope 2 (indirect emissions linked to the company's energy consumption) emissions. Simplified enterprise value measures a total value and is calculated as the sum of market capitalization and total debt. The footprint is expressed in tons of CO_2 equivalent per million euros of entreprise value.

(2) Source: BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) S&P 500 (USD) NR

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY ESG MOMENTUM EUROPE **Legal Entity Identifier:** 213800CUB95MBN63Q829

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ Yes ☒ No

☐ It made **sustainable investment with an environmental objective**: ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **60.0%** of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It made **sustainable investments with a social objective** : ___%

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using ESG external and/or internal proprietary methodology(ies). As such, the product is exposed to issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The investment strategy selects issuers through:

- o A positive screening using a selectivity approach. This involves evaluation of Environmental, Social, and Governance (ESG) performance of an issuer against a combination of environmental, social and governance factors which include but not limited to :
  - Environmental: energy efficiency, reduction of emissions of greenhouse gases, treatment of waste;

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity);

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights.

o A negative screening applying exclusion criteria with regard to issuers that are in violation of international norms and convention, such as the UN Nations Global Compact principles and OECD Guidelines for Multinational Enterprises, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC) policy.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights, according to the Stewardship policy, where applicable.

In synthetic replication, engagement with issuers and exercise of voting rights, if any, are only applied for the Financing Assets underlying securities.

The BNP Paribas Momentum Europe ESG (NTR) index (Bloomberg: BNPIFEME index) has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The percentage of the financial product's economic exposure compliant with the RBC policy: **100%**

- The percentage of the financial product's economic exposure covered by the ESG analysis based on external and/or ESG proprietary methodology(ies): **100%**

- The minimum percentage of the financial product's economic exposure investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC policy and/or any other extra financial criteria: **20%**

- The weighted average ESG score of the financial product's economic exposure compared tothe weighted average ESG score of its investment universe: **67.1 vs 60.4 (STOXX Europe 600 (EUR) NR)*.**

- The average carbon footprint of the financial product's reference benchmark economic exposure compared to the average carbon footprint of its investment universe: **91.8 vs 65.6 tCO_2 eq/EV (STOXX Europe 600 (EUR) NR)*.**

- The percentage of the financial product's economic exposure in "sustainable investments" as defined in Article 2 (17) of SFDR: **60%**

* Source: BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

- *...and compared to previous periods ?*

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's economic exposure compliant with the RBC policy	100%	100%	100%	100%	In line with the financial product's commitment
The percentage of the financial product's economic exposure covered by the ESG analysis based on external and/or ESG proprietary methodology(ies)	100%	100%	100%	100%	In line with the financial product's commitment
The minimum percentage of the financial product's economic exposure investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC policy and/or any other extra financial criteria	20%	20%	20%	20%	In line with the financial product's commitment
The weighted average ESG score of the financial product's economic exposure compared tothe weighted average ESG score of its investment universe	64.6 vs 59.4	65.9 vs 59.4	66.3 vs 59.9	67.1 vs 60.4	In line with the financial product's commitment

The percentage of the financial product's reference benchmark economic exposure in "sustainable investments" as defined in Article 2 (17) of SFDR	71.3%	56.0%	55.2%	60%	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year.
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

As of the date of the annual report, the financial product applies synthetic replication. Consequently, the sustainable investments to which the financial product is exposed and described below are the ones of the underlying securities of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment

manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

In synthetic replication, engagement with issuers and exercise of voting rights, if any, are only applied for the Financing Assets underlying securities.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicators
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions :

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

In synthetic replication, engagement with issuers and exercise of voting rights, if any, are only applied for the Financing Assets underlying securities.

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water

9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

What were the top investments of this financial product?

The financial product applies synthetic replication.
The top investments disclosed below are therefore twofold:
- The assets physically held at the level of the financial product
- The assets of the reference benchmark underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

Assets physically held at the level of the financial product:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: the 31/12/2025

Largest investments**	Sector	% Assets*	Country**
KNORR BREMSE AG	Industrials	7.83%	Germany
TAG IMMOBILIEN AG	Real Estate	7.35%	Germany
SSAB CLASS B B	Materials	7.30%	Sweden
GERRESHEIMER AG	Health Care	7.18%	Germany
T RECEIVE EUR FIXED PAY FLOAT + 35.6BP 2025-07-28	Financials	5.26%	France
ADIDAS N AG N	Consumer Discretionary	4.63%	Germany

TELECOM ITALIA	Communication	2.00%	Italy

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on the underlying portfolio data of the investment strategy and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

What was the asset allocation ?

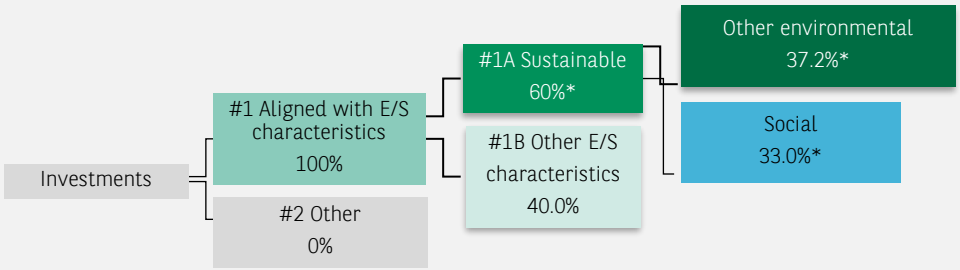

Asset allocation describes the share of investments in specific assets.

As of the date of the annual report, the financial product applies synthetic replication. Consequently, the asset allocation for this financial product is the ones of the underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 100%.

The proportion of sustainable investments of the financial product is 60%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

The financial product applies synthetic replication.
The top investments disclosed below are therefore twofold:

- The assets physically held at the level of the financial product
- The assets of the reference benchmark underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

Assets physically held at the level of the financial product:

Sectors	% Asset
Capital Goods	18.67%
Materials	13.94%
Pharmaceuticals Biotechnology & Life	10.41%
Banks	9.05%
Utilities	7.99%
Real Estate Management & Development	7.35%
Software & Services	6.73%
Consumer Durables & Apparel	4.63%
Cash	4.41%
Consumer Discretionary Distribution &	4.08%
Automobiles & Components	3.41%
Consumer Services	3.33%
Health Care Equipment & Services	3.17%
Financial Services	2.84%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025..
The largest investments are based on official accounting data and are based on the transaction date.

Assets of the reference benchmark underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy:

Sectors	% Asset
Financials	33.6%
Industrials	20.0%
Health Care	12.3%
Communication Services	7.4%
Information Technology	6.0%
Utilities	5.9%
Consumer Discretionary	5.4%
Consumer Staples	4.6%
Energy	3.2%
Materials	1.3%
Real Estate	0.4%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The sector breakdown is based on the underlying portfolio data of the investment strategy and is based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

The financial product did not commit to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, and it did not do so.

○ *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

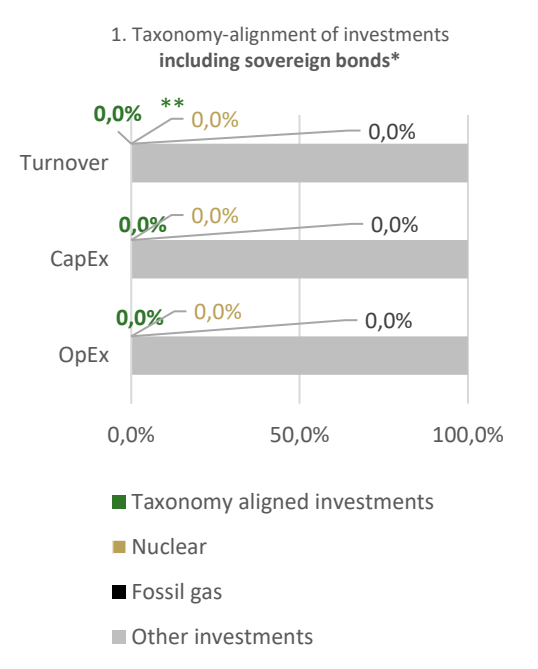

☐ Yes:

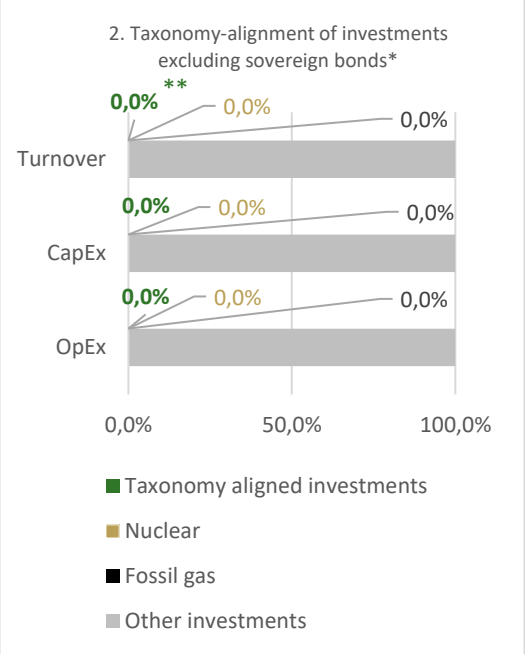

☐ In fossil gas ☐ In nuclear energy

☒ No:

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2022*	0%	/	/
2023**	0%	/	/
2024***	0%	0%	0%
2025***	0%	0%	0%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the current level of data at the disposal of the management company at the time.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **37.2%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **33.0%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product reference benchmark investment strategy shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

  More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)

- The financial product investment strategy shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the proprietary and/or external ESG methodology.

- The financial product's investment universe of the investment strategy shall be reduced by a minimum of 20% due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC Policy and/or other extra-financial criteria.

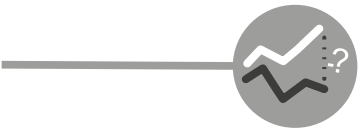

- The financial product shall have the weighted average ESG score of its investment strategy portfolio higher than the weighted average ESG score of its investment universe.

- The financial product shall have the weighted average carbon footprint of its investment strategy portfolio lower than the weighted average carbon footprint of its investment universe.

- The financial product shall invest at least 30% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR and as disclosed in the asset allocation below. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus

  There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance, between two strategy reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the reference benchmark administrator rules.

  In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: https://www.bnpparibas-am.com/en/sustainability-documents/

How did this financial product perform compared to the reference benchmark?

The BNP Paribas Momentum Europe ESG (NTR) index (Bloomberg: BNPIFEME index) has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: https://indx.bnpparibas.com/nr/FELETR.pdf.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "How did the sustainability indicators perform?"

How did this financial product perform compared with the reference benchmark?

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

How did this financial product perform compared with the broad market index?

	Carbon footprint (tCO2 eq/EV) [1,2]	ESG score[2]
Financial product	91.8	67.1
Broad market index[3]	67.3	60.4

(1) The carbon footprint is the sum of each carbon emission divided by its simplified enterprise value, multiplied by the weight in the portfolio. Carbon emissions represent the sum of a company's scope 1 (direct emissions from installations) and scope 2 (indirect emissions linked to the company's energy consumption) emissions. Simplified enterprise value measures a total value and is calculated as the sum of market capitalization and total debt. The footprint is expressed in tons of CO_2 equivalent per million euros of entreprise value.

(2) Source: BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) STOXX Europe 600 (EUR) NR

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY EUR Aggregate Bond SRI Fossil Free

Legal Entity Identifier: 213800L5V2IKDB9QP195

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

- ☐ Yes
- ☒ No

- ☐ It made **sustainable investment with an environmental objective:** ___%
  - ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **21.8%** of sustainable investments
  - ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
  - ☒ with a social objective
- ☐ It made **sustainable investments with a social objective** : ___%
- ☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using the methodology of the index provider. As such, the product is exposed to issuers that demonstrate superior or improve environmental and social practices, while implementing robust corporate governance practices withintheir sector of activity.

The investment strategy selects issuers through:

- A negative screening applying exclusion criteria. This is applied with regard to issuers with a poor ESG profile and issuers that are in systematic violation of the UN Global Compact.

- A positive screening using a selectivity approach. This involves evaluation of Environmental, Social, and Governance (ESG) performance of an issuer against a combination of environmental, social and governance factors which include but not limited to :

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;

- Social: respect of human rights and workers'rights, human resources management (workers'health and safety, diversity);

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable, in collaboration with BNP Paribas Asset Management's Sustainability Centre.

The Bloomberg MSCI Euro Aggregate ex Fossil Fuel SRI Select (NTR) has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The weightings of Environmental (E), Social (S) and Governance (G) in MSCI's proprietary ESG rating methodology also used by Bloomberg indices may vary by sector, with some having weightings below 20%. Investors may find details on MSCI's ESG Rating Methodology Document via the following link: https://support.msci.com/support/emea-esg-and-climate-labels/explanation-of-esg-pillar/04461552866 - MSCI after creating an account.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product, and are based on the reference benchmark ESG methodology

- The percentage of the financial product's portfolio compliant with the reference benchmark eligible universe exclusion criteria; **100%**

- The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology; **100%**

- The minimum percentage of the financial product's universe reduction due to exclusion of securities with low ESG score and/or sector exclusions and/or any other extra financial criteria; **30%**

- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of SFDR : **21.8%**

- *....and compared to previous periods ?*

Indicator	2023*	2024**	2025**	Comment
The percentage of the financial product's portfolio compliant with the reference benchmark eligible universe exclusion criteria;	100%	100%	100%	In line with the financial product's commitment
The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology;	100%	100%	100%	In line with the financial product's commitment
The minimum percentage of the financial product's universe reduction due to exclusion of securities with low ESG score and/or sector exclusions and/or any other extra financial criteria	20.0%	25.0%	30.0%	In line with the financial product's commitment
The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of SFDR	19.4%	21.7%	21.8%	In line with the financial product's commitment

*Figures reported in 2023 are expressed as a quaterly weighted average.
** Figures reported in 2024 & 2025 are expressed as a quarterly weighted average based on the AUM

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The investment manager is using, as of the date of the prospectus, the BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus,to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts indicators are taken into account:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31.12.2025

Largest investments**	Sector	% Assets*	Country**
FRANCE (REPUBLIC OF) 2.50 PCT 25-MAY-2030	Government	0.48%	France
FRANCE (REPUBLIC OF) 3.50 PCT 25-NOV-2033	Government	0.45%	France
FRANCE (REPUBLIC OF) 1.50 PCT 25-MAY-2031	Government	0.45%	France
FRANCE (REPUBLIC OF) 0.75 PCT 25-MAY-2028	Government	0.44%	France
FRANCE (REPUBLIC OF) 5.50 PCT 25-APR-2029	Government	0.43%	France

FRANCE (REPUBLIC OF) 0.75 PCT 25-FEB-2028	Government	0.35%	France

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

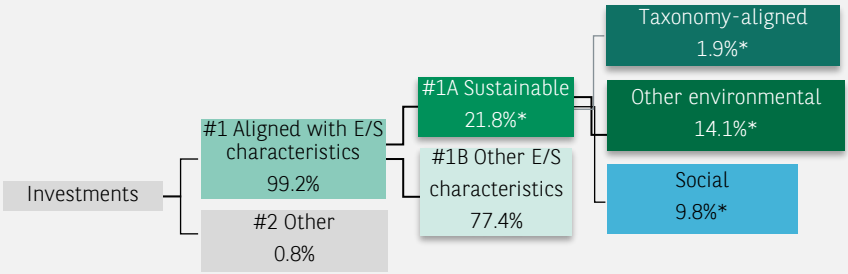

What was the asset allocation ?

Asset allocation describes the share of investments in specific assets.

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 99.2%

The proportion of sustainable investments of the financial product is 21.8%

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

Sectors (Level 2)	% Asset
National	58.5%
Banking	10.9%
Supranationals	7.6%
Regional & Local	5.6%
Financial Services	3.4%
Telecommunications	2.1%
Health Care	2.0%
Industrial Services	2.0%
Materials	1.1%
Real Estate	1.0%
Media	0.8%
Utilities	0.7%
Insurance	0.7%
Consumer Staple Products	0.7%
Industrial Products	0.6%
Cash	0.6%
Consumer Discretionary Products	0.4%
Software & Tech Services	0.4%
Retail & Whsle - Discretionary	0.2%
Consumer Discretionary Services	0.2%
Tech Hardware & Semiconductors	0.2%
Renewable Energy	0.1%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

- ***Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?***

☐ Yes:

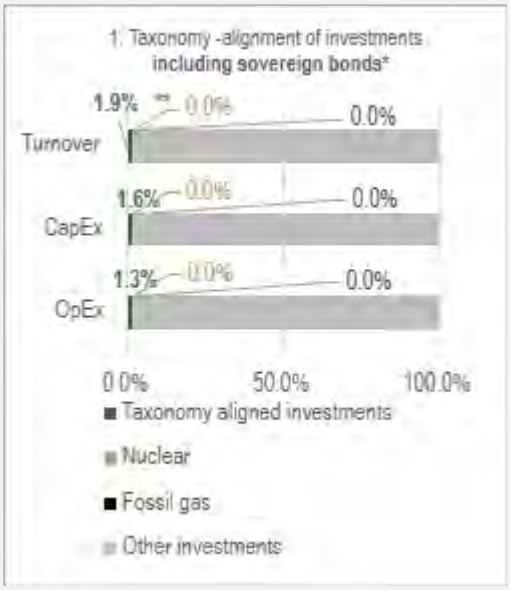

☐ In fossil gas ☐ In nuclear energy

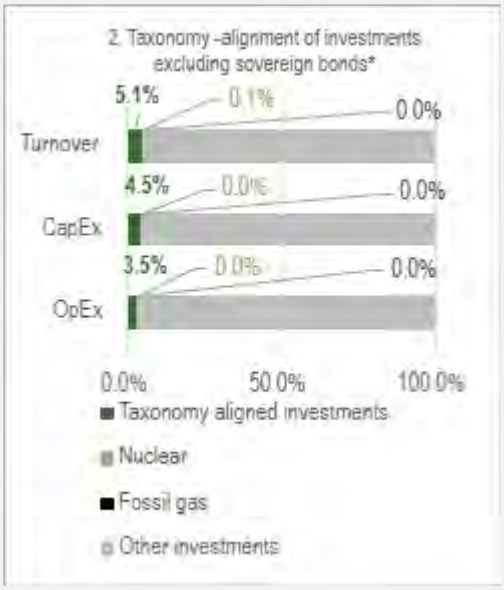

☒ No:

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2023*	0.8%	/	/
2024**	1.6%	2.0%	1.7%
2025***	1.9%	1.6%	1.3%

* Figures reported in 2023 are expressed as a quaterly weighted average.
** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2023 given the current level of data at the disposal of the management company at the time.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **14.1%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **9.8%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- the proportion of assets that are not used to meet environmental or social characteristics promoted by the financial product. These assets are used for investment purposes , or

- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

-The financial product excludes companies violating international norms, exposed to tobacco or controversial weapons, as well as companies active in sectors with possible negative impacts on the climate in accordance with the exclusion criteria defined in the Article 12. 1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission. The details on how the exclusions are applied, depending on the asset classes, are available on our website (https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ section « PAB exclusions for ESMA Guidelines »).

- The financial product complies, as part of its investment policy, with the list of exclusion criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/. As the financial product is a passively-managed ETF, the implementation of exclusions depends on the index provider's own ESG data and methodology

-The GHG intensity of the investee companies in portfolio is lower than that of the extra-financial investment universe (PAI 3)

-The percentage of companies of the financial product's portfolio without carbon emission reduction initiative is lower than that of its investment universe (Volontary Environmental PAI 4)

The financial product shall comply with the eligible stock criteria by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

- The financial product shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.

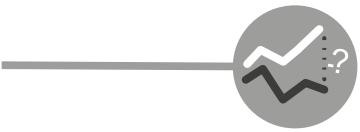

- The financial product's investment universe of the investment strategy, as defined in the Prospectus, shall be reduced by a minimum of 30% due to exclusion of securities with low ESG score and/or sector exclusions and/or other extra-financial criteria.

- The financial product shall invest at least 5% of its assets in "sustainable investments" as defined in Article 2(17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives"and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

- The financial product invests in securities issued by eligible states following the conditions of the Central Labelling Agency (CLA) of the Towards Sustainability label dated as of October 6, 2023.

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

The Bloomberg MSCI Euro Aggregate ex Fossil Fuel SRI Select (NTR) has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: www.bloombergindices.com

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*"

How did this financial product perform compared with the reference benchmark?

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

How did this financial product perform compared with the broad market index?

	GHG	ESG score[2]
Financial product	20.1	60.8
Broad market index[3]	28.4	59.9

(1) GHG emissions is calculated as the sum, for each GHG emissions of the investee company's (for the relevant scope), weighted by the ratio of the current value of the investment to the investee company's entreprise value.

(2) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) Bloomberg Euro Aggregate (EUR) RI

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY EUR Corp Bond SRI Fossil Free Ultrashort Duration **Legal Entity Identifier:** 2138005A5VTEBBNJY683

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **42.4%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It made **sustainable investments with a social objective** : ___%

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The investment strategy selects issuers through:

- A negative screening applying exclusion criteria. This is applied with regard to issuers with a poor ESG profile and issuers that are in systematic violation of the UN Global Compact.:
- A positive screening using a selectivity approach. This involves evaluation of Environmental, Social, and Governance (ESG) performance of an issuer against a combination of environmental, social and governance factors which include but not limited to:
- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;

- Social: respect of human rights and workers' rights, human resources management (workers'health and safety, diversity);

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable, in collaboration with BNP Paribas Asset Management's Sustainability Centre.

The Bloomberg MSCI Euro Corporate Ultrashort Fixed and Floating Rate SRI (NTR) Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The weightings of Environmental (E), Social (S) and Governance (G) in MSCI's proprietary ESG rating methodology also used by Bloomberg indices may vary by sector, with some having weightings below 20%. Investors may find details on MSCI's ESG Rating Methodology Document via the following link: https://support.msci.com/support/emea-esg-and-climate-labels/explanation-of-esg-pillar/04461552866 - MSCI after creating an account

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The following sustainability indicators are used to measure the attainment of the sustainable investment objective of the financial product, and are based on the reference benchmark ESG methodology:

- The percentage of the financial product's portfolio compliant with the reference benchmark eligible stock criteria taking into account sectorial and controversial policies: **100%**

- The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology: **98.7%**

- The minimum percentage of the financial product's investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per extra financial criteria: **30%**

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **42.4%**

...and compared to previous periods ?

Indicator	2023*	2024**		Comment
The percentage of the financial product's portfolio compliant with the reference benchmark eligible stock criteria taking into account sectorial and controversial policies	100%	100%	100%	In line with the financial product's commitment
The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology:	100%	100%	98.7%	In line with the financial product's commitment
The minimum percentage of the financial product's investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per extra financial criteria	20.0%	25.0%	30.0%	In line with the financial product's commitment
The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation:	42.4%	42.5%	42.4%	In line with the financial product's commitment

*Figures reported in 2023 are expressed as a quaterly weighted average.

** Figures reported in 2024 and 2025are expressed as a quarterly weighted average based on the AUM

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The investment manager is using, as of the date of the prospectus, the BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus,to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

   a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

   b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

The share of financial product investments considered by the SFDR regulation to be sustainable investments contributes in the proportions described in the question on the allocation of assets to the environmental objectives defined in the European Regulation on Taxonomy in force to date: climate change mitigation and/or adaptation to climate change.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio

10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations SFDR: Sustainability-related disclosures - BNP Paribas)

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31/12/2025

Largest investments**	Sector	% Assets*	Country**
WELLS FARGO & COMPANY 1.00 PCT 02-FEB-2027	Financials	0.85%	United States

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

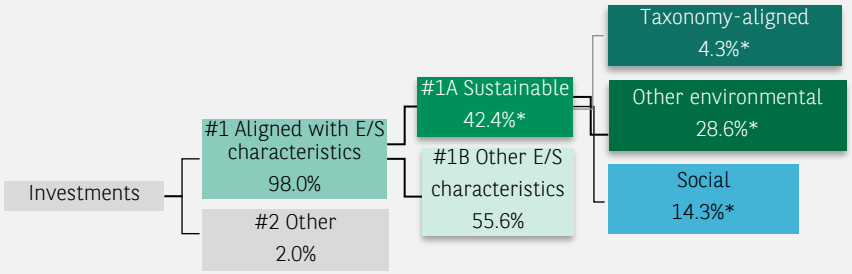

Asset allocation describes the share of investments in specific assets.

What was the asset allocation ?

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 98.0%.

The proportion of sustainable investments of the financial product is 42.4%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?".

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

Sectors	% Asset
Banking	45.3%
Financial Services	10.5%
Health Care	7.7%
Real Estate	5.9%
Telecommunications	4.9%
Industrial Services	4.6%
Consumer Discretionary Products	4.5%
Materials	3.3%
Insurance	2.6%
Consumer Staple Products	2.0%
Tech Hardware & Semiconductors	1.7%
Media	1.6%
Retail & Whsle - Discretionary	1.4%
Software & Tech Services	1.2%
Industrial Products	1.1%
Consumer Discretionary Services	0.5%
Utilities	0.5%
Cash	0.5%
Renewable Energy	0.1%

Source of data: BNP Paribas Asset Management, calculated on the 31/2/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

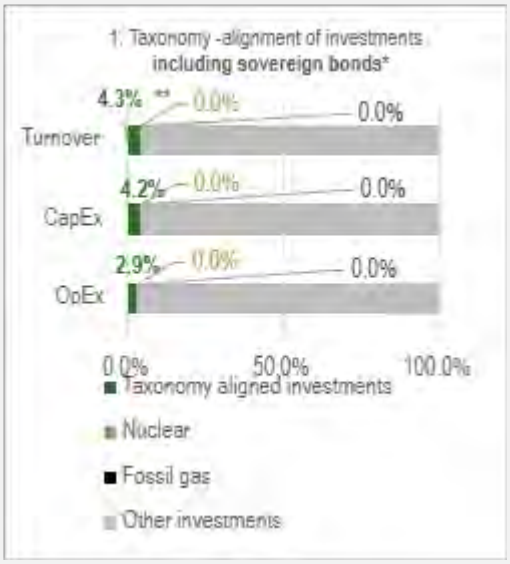

☐ Yes:

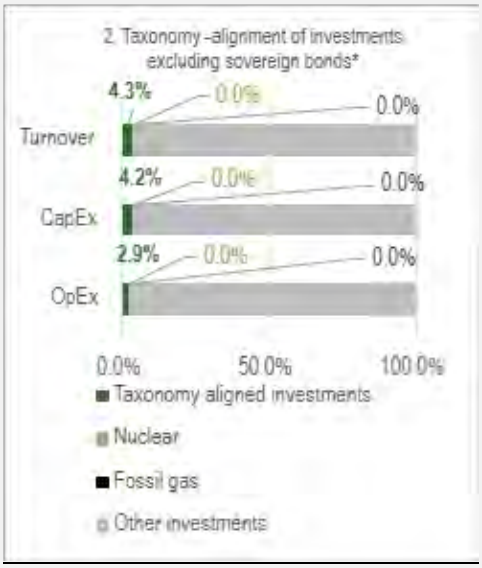

☐ In fossil gas ☐ In nuclear energy

☒ No:

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2023*	1.7%	/	/
2024**	3.5%	4.0%	3.3%
2025**	4.3%	4.2%	2.9%

* Figures reported in 2023 are expressed as a quaterly weighted average.
** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2023 given the current level of data at the disposal of the management company at the time.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **28.6%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **14.3%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product excludes companies violating international norms, exposed to tobacco or controversial weapons, as well as companies active in sectors with possible negative impacts on the climate in accordance with the exclusion criteria defined in the Article 12. 1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission. The details on how the exclusions are applied, depending on the asset classes, are available on our website (https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ section « PAB exclusions for ESMA Guidelines »)

- The financial product complies, as part of its investment policy, with the list of exclusion criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https//docfinder.bnpparibas-am com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ . As the financial product is a passively-managed ETF, the implementation of exclusions depends on the index provider's own ESG data and methodology

-

- The GHG intensity of the investee companies in portfolio is lower than that of the extra-financial investment universe (PAI 3).

- - The percentage of companies of the financial product's portfolio without carbon emission reduction initiative is lower than that of its investment universe (Volontary Environmental PAI 4)

- The financial product shall comply with the eligible universe criteria of the index by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

- The financial product shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.

- The financial product's investment universe of the investment strategy, as defined in the Prospectus, shall be reduced by a minimum of 30% due to exclusion of securities with low ESG score and/or sector exclusions and/or other extra-financial criteria.

- The financial product shall invest at least 20% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "*What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives* " and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

  There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

  In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

The Bloomberg MSCI Euro Corporate Ultra Short Fixed and Floating Rate (EUR) RI index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: https://www.bloomberg.com/professional/product/indices/

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the

environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*".

- ***How did this financial product perform compared with the reference benchmark?***

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

- ***How did this financial product perform compared with the broad market index?***

	ESG score[1]
Financial product	61.0
Broad market index[2]	60.9

(1) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(2) The Bloomberg MSCI Euro Corporate Ultra Short Fixed and Floating Rate (EUR)

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS EASY EUR CORP BOND SRI PAB **Legal Entity Identifier: 213800R5FRPLL29GH115**

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective** : ___%

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **51.4%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using the methodology of the index provider. As such, the product is exposed to issuers that demonstrate superior or improve environmental and social practices, while implementing robust corporate governance practices withintheir sector of activity.

The investment strategy selects issuers through:

- A negative screening applying exclusion criteria. This is applied with regard to issuers with a poor ESG profile and issuers that are in systematic violation of the UN Global Compact.

- A positive screening using a selectivity approach. This involves evaluation of Environmental, Social, and Governance (ESG) performance of an issuer against a combination of environmental, social and governance factors which include but not limited to :

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;

- Social: respect of human rights and workers' rights, human resources management (workers'health and safety, diversity);

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable, in collaboration with BNP Paribas Asset Management's Sustainability Centre.

The Bloomberg MSCI Euro Corporate SRI Sustainable Select Ex Fossil Fuel PAB (EUR) RI Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The weightings of Environmental (E), Social (S) and Governance (G) in MSCI's proprietary ESG rating methodology also used by Bloomberg indices may vary by sector, with some having weightings below 20%. Investors may find details on MSCI's ESG Rating Methodology Document via the following link: https://support.msci.com/support/emea-esg-and-climate-labels/explanation-of-esg-pillar/04461552866 - MSCI after creating an account.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the reference benchmark eligible stock criteria taking into account sectorial and controversial policies: **100%**

- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology: **99.5%**

- The minimum percentage of the financial product's investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per extra financial criteria: **30%**

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **51.4%**

***** Source: BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. - *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The investment manager is using, as of the date of the prospectus, the BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus,to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as

sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer

group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinationa Enterprises and UN Guiding Principles on Business & Human Rights, including the principle and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
13. Board gender diversity

14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31.12.2025

Largest investments**	Sector	% Assets*	Country**
ALPHABET INC 3.00 PCT 06-MAY-2033	Communications	0.21%	United States

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

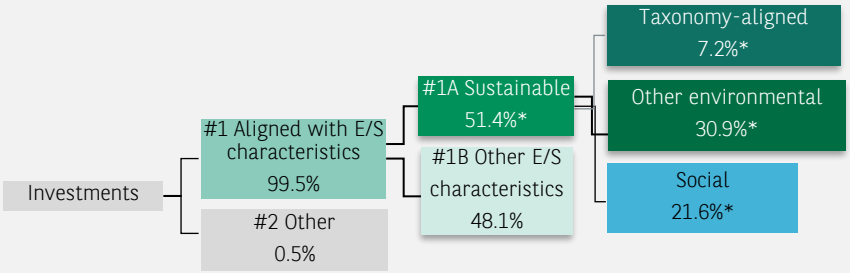

What was the asset allocation ?

Asset allocation describes the share of investments in specific assets.

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 99.5%.

The proportion of sustainable investments of the financial product is 51.4%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

Sectors (Level 2)	% Asset
Banking	30.4%
Health Care	10.1%
Telecommunications	8.0%
Financial Services	6.5%
Real Estate	6.2%
Industrial Services	5.8%
Materials	5.8%
Media	5.1%
Consumer Staple Products	4.0%
Utilities	3.7%
Industrial Products	3.4%
Consumer Discretionary Products	3.2%
Insurance	2.7%
Retail & Whsle - Discretionary	2.0%
Software & Tech Services	1.0%
Consumer Discretionary Services	1.0%
Tech Hardware & Semiconductors	0.6%
Renewable Energy	0.5%
Cash	0.2%
Retail & Wholesale - Staples	0.1%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly .

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

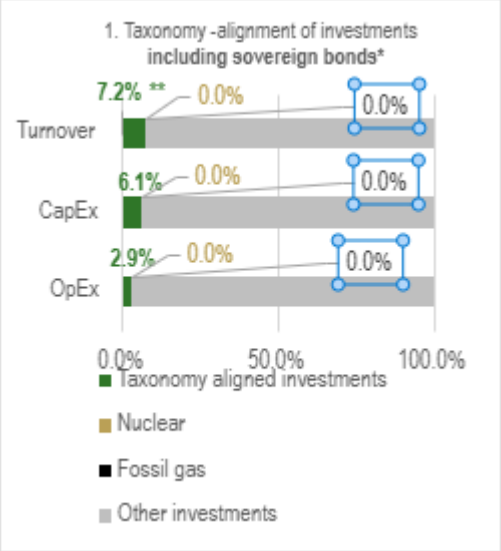

☒ No:

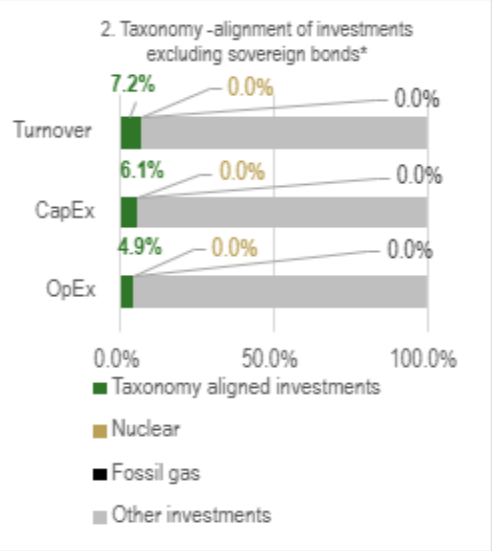

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2022*	0.8%	/	/
2023**	2.6%	/	/
2024***	5.1%	5.3%	4.5%
2025***	7.2%	6.1%	4.9%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the current level of data at the disposal of the management company at the time.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **30.9%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **21.6%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product excludes companies violating international norms, exposed to tobacco or controversial weapons, as well as companies active in sectors with possible negative impacts on the climate in accordance with the exclusion criteria defined in the Article 12. 1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission. The details on how the exclusions are applied, depending on the asset classes, are available on our website (https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ section « PAB exclusions for ESMA Guidelines »).

- The financial product complies, as part of its investment policy, with the list of exclusion criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ . As the financial product is a passively-managed ETF, the implementation of exclusions depends on the index provider's own ESG data and methodology

- The GHG intensity of the investee companies in portfolio is lower than that of the extra-financial investment universe (PAI 3)

- The percentage of companies of the financial product's portfolio without carbon emission reduction initiative is lower than that of its investment universe (Volontary Environmental PAI 4).

- The financial product shall comply with the eligible stock criteria by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

-The financial product shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology

- The financial product's investment universe of the investment strategy, as defined in the Prospectus, shall be reduced by a minimum of 30% due to exclusion of securities with low ESG score and/or sector exclusions and/or other extra-financial criteria.

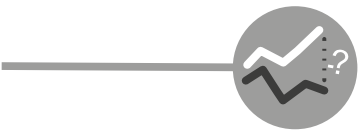

- The financial product shall have the weighted average GHG emissions of its portfolio at least 50% lower than the weighted average GHG emissions of its investment universe.

- The financial product shall achieve an annual decarbonisation target of at least 7%.

The financial product shall invest at least 30% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

The Bloomberg MSCI Euro Corporate SRI Sustainable Select Ex Fossil Fuel PAB (EUR) RI Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: www.bloombergindices.com/.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*"

- *How did this financial product perform compared with the reference benchmark?*

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

- *How did this financial product perform compared with the broad market index?*

	GHG [1,2]	ESG score[2]
Financial product	66.6	63.1
Broad market index[3]	99.9	60.8

(1) GHG emissions is calculated as the sum, for each GHG emissions of the investee company's (for the relevant scope), weighted by the ratio of the current value of the investment to the investee company's entreprise value.

(2) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) Bloomberg Euro Liquid Corporate (EUR) RI

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY EUR CORP BOND SRI PAB 1-3Y **Legal Entity Identifier: 213800WUDLD3KPY86A85**

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective**: ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **51.5%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It made **sustainable investments with a social objective** : ___%

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using the methodology of the index provider. As such, the product is exposed to issuers that demonstrate superior or improve environmental and social practices, while implementing robust corporate governance practices withintheir sector of activity.

The investment strategy selects issuers through:

- A negative screening applying exclusion criteria. This is applied with regard to issuers with a poor ESG profile and issuers that are in systematic violation of the UN Global Compact.

- A positive screening using a selectivity approach. This involves evaluation of Environmental, Social, and Governance (ESG) performance of an issuer against a combination of environmental, social and governance factors which include but not limited to :

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;

- Social: respect of human rights and workers' rights, human resources management (workers'health and safety, diversity);

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable, in collaboration with BNP Paribas Asset Management's Sustainability Centre.

The Bloomberg MSCI 1-3Y Euro Corp SRI Sustainable Select Ex Fossil Fuel PAB (EUR) RI Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The weightings of Environmental (E), Social (S) and Governance (G) in MSCI's proprietary ESG rating methodology also used by Bloomberg indices may vary by sector, with some having weightings below 20%. Investors may find details on MSCI's ESG Rating Methodology Document via the following link: https://support.msci.com/support/emea-esg-and-climate-labels/explanation-of-esg-pillar/04461552866 - MSCI after creating an account

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the reference benchmark eligible stock criteria taking into account sectorial and controversial policies: **100%**

- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology: **100%**

- The minimum percentage of the financial product's investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per extra financial criteria: **20%**

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **51.5%**

...and compared to previous periods ?

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's portfolio compliant with the reference benchmark eligible stock criteria taking into account sectorial and controversial policies	100%	100%	100%	100%	In line with the financial product's commitment
The percentage of the portfolio covered by the ESG analysis based on the ESG internal proprietary methodology	100%	100%	100%	100%	In line with the financial product's commitment
The minimum percentage of the financial product's investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per extra financial criteria	20%	20%	20%	30%	In line with the financial product's commitment
The percentage of the financial product's portfolio invested in 'sustainable investments' as	44.3%	49.5%	48.7%	51.5%	In line with the financial product's commitment

defined in Article 2 (17) of the SFDR regulation					

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

* Source: BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The investment manager is using, as of the date of the prospectus, the BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus,to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies

4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinationa Enterprises and UN Guiding Principles on Business & Human Rights, including the principle and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31/12/2025

Largest investments**	Sector	% Assets*	Country**
NOVO NORDISK FINANCE NETHERLANDS BV 2.38 PCT 27-MAY-2028	Health Care	1.13%	Netherlands
VISA INC 2.25 PCT 15-MAY-2028	Financials	0.94%	United States

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

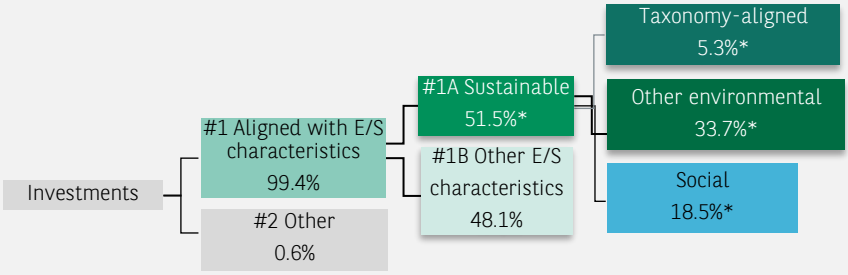

What was the asset allocation ?

Asset allocation describes the share of investments in specific assets.

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 99.4%.

The proportion of sustainable investments of the financial product is 51.5%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

Sectors (level 2)	% Asset
Banking	39.4%
Financial Services	7.6%
Industrial Products	6.6%
Consumer Staple Products	6.0%
Industrial Services	5.4%
Health Care	5.3%
Real Estate	4.8%
Consumer Discretionary Products	4.7%
Materials	3.3%
Media	3.0%
Telecommunications	2.4%
Retail & Whsle - Discretionary	2.3%
Utilities	2.1%
Software & Tech Services	1.9%
Tech Hardware & Semiconductors	1.8%
Cash	0.8%
Consumer Discretionary Services	0.8%
Insurance	0.8%
Retail & Wholesale - Staples	0.5%
Renewable Energy	0.4%

Source of data: BNP Paribas Asset Management,calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly .

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

☐ Yes:

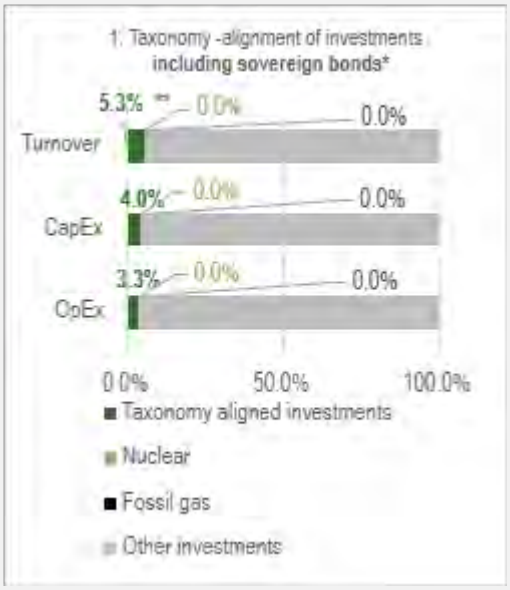

☐ In fossil gas ☐ In nuclear energy

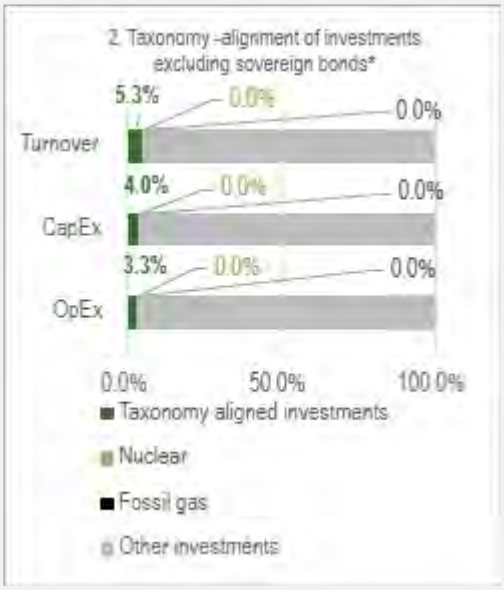

☒ No:

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2022*	0.9%	/	/
2023**	1.8%	/	/
2024***	3.3%	3.8%	3.1%
2025***	5.3%	4.0%	3.3%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the current level of data at the disposal of the management company at the time.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **33.7%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **18.5%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product excludes companies violating international norms, exposed to tobacco or controversial weapons, as well as companies active in sectors with possible negative impacts on the climate in accordance with the exclusion criteria defined in the Article 12. 1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission. The details on how the exclusions are applied, depending on the asset classes, are available on our website (https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ section « PAB exclusions for ESMA Guidelines »).

--The financial product complies, as part of its investment policy, with the list of exclusion criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/. As the financial product is a passively-managed ETF, the implementation of exclusions depends on the index provider's own ESG data and methodology

-The GHG intensity of the investee companies in portfolio is lower than that of the extra-financial investment universe (PAI 3)

- The percentage of companies of the financial product's portfolio without carbon emission reduction initiative is lower than that of its investment universe (Volontary Environmental PAI 4)

- The financial product shall comply with the eligible stock criteria by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

- The financial product shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.

- The financial product's investment universe of the investment strategy, as defined in the Prospectus, shall be reduced by a minimum of 30% due to exclusion of securities with low ESG score and/or sector exclusions and/or other extra-financial criteria.

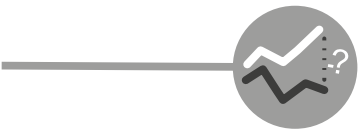

- The financial product shall have the weighted average GHG emissions of its portfolio at least 50% lower than the weighted average GHG emissions of its investment universe.

- The financial product shall achieve an annual decarbonisation target of at least 7%.

The financial product shall invest at least 25% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNP Paribas Asset Management France

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

The Bloomberg MSCI 1-3Y Euro Corp SRI Sustainable Select Ex Fossil Fuel PAB (EUR) RI Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: www.bloombergindices.com/.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*"

- *How did this financial product perform compared with the reference benchmark?*

  Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

- *How did this financial product perform compared with the broad market index?*

	GHG emissions[1,2]	ESG score[2]
Financial product	35.8	62.7
Broad market index[3]	112.9	60.2

(1) GHG emissions is calculated as the sum, for each GHG emissions of the investee company's (for the relevant scope), weighted by the ratio of the current value of the investment to the investee company's entreprise value..

(2) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) Bloomberg Euro Liquid Corporate 1 - 3 Year (EUR) RI

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS EASY EUR CORP BOND SRI PAB 3-5Y **Legal Entity Identifier: 213800H47ZGQHW71BE93**

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **47.9%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It made **sustainable investments with a social objective** : ___%

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using the methodology of the index provider. As such, the product is exposed to issuers that demonstrate superior or improve environmental and social practices, while implementing robust corporate governance practices withintheir sector of activity.

The investment strategy selects issuers through:

- A negative screening applying exclusion criteria. This is applied with regard to issuers with a poor ESG profile and issuers that are in systematic violation of the UN Global Compact.

- A positive screening using a selectivity approach. This involves evaluation of Environmental, Social, and Governance (ESG) performance of an issuer against a combination of environmental, social and governance factors which include but not limited to :

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;

- Social: respect of human rights and workers' rights, human resources management (workers'health and safety, diversity);

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable, in collaboration with BNP Paribas Asset Management's Sustainability Centre.

The Bloomberg MSCI 3-5YCorp SRI Sustainable Select Ex Fossil Fuel PAB (EUR) RI Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The weightings of Environmental (E), Social (S) and Governance (G) in MSCI's proprietary ESG rating methodology also used by Bloomberg indices may vary by sector, with some having weightings below 20%. Investors may find details on MSCI's ESG Rating Methodology Document via the following link: https://support.msci.com/support/emea-esg-and-climate-labels/explanation-of-esg-pillar/04461552866 - MSCI after creating an account.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the reference benchmark eligible stock criteria taking into account sectorial and controversial policies: **100%**

- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology: **99.2%**

- The minimum percentage of the financial product's investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per extra financial criteria: **30%**

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **47.9%**

...and compared to previous periods ?

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's portfolio compliant with the reference benchmark eligible stock criteria taking into account sectorial and controversial policies	100%	100%	100%	100%	In line with the financial product's commitment
The percentage of the portfolio covered by the ESG analysis based on the ESG internal proprietary methodology	100%	100%	100%	99.2%	In line with the financial product's commitment
The minimum percentage of the financial product's investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per extra financial criteria	20%	20%	20%	30%	In line with the financial product's commitment
The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation	48.6%	49.5%	47.8%	47.9%	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
***Figures reported in 2024 are expressed as a quarterly weighted average based on the AUM

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The investment manager is using, as of the date of the prospectus, the BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus,to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

   a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

   b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

   a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinationa Enterprises and UN Guiding Principles on Business & Human Rights, including the principle and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or

the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31/12/2025

Largest investments**	Sector	% Assets*	Country**
ALPHABET INC 2.50 PCT 06-MAY-2029	Communications	0.72%	United States
VERIZON COMMUNICATIONS INC 4.25 PCT 31-OCT-2030	Communications	0.63%	United States
ESSILORLUXOTTICA SA 2.88 PCT 05-MAR-2029	Health Care	0.61%	France
ASTM SPA 1.50 PCT 25-JAN-2030	Industrials	0.57%	Italy
ORANGE SA 5.38 PCT 31-DEC-2079	Communications	0.52%	France

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

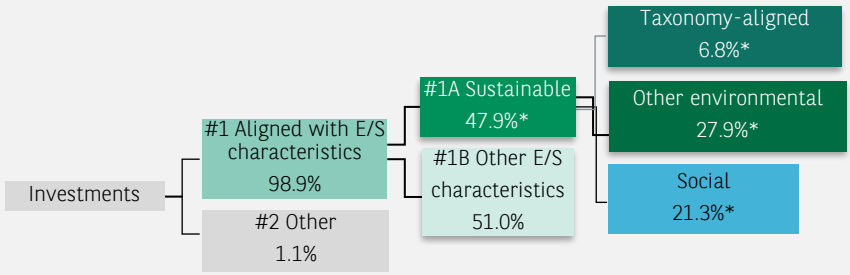

What was the asset allocation ?

Asset allocation describes the share of investments in specific assets.

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 98.9%.

The proportion of sustainable investments of the financial product is 47.9%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

- *In which economic sectors were the investments made ?*

Sectors (Level 2)	% Asset
Banking	35.4%
Health Care	10.4%
Industrial Services	7.1%
Real Estate	6.3%
Financial Services	6.1%
Telecommunications	5.7%
Materials	4.9%
Consumer Staple Products	4.4%
Consumer Discretionary Products	4.0%
Media	3.9%
Industrial Products	2.7%
Utilities	2.3%
Retail & Whsle - Discretionary	2.1%
Insurance	1.5%
Consumer Discretionary Services	1.1%
Tech Hardware & Semiconductors	0.8%
Software & Tech Services	0.5%
Renewable Energy	0.5%
Cash	0.2%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly .

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

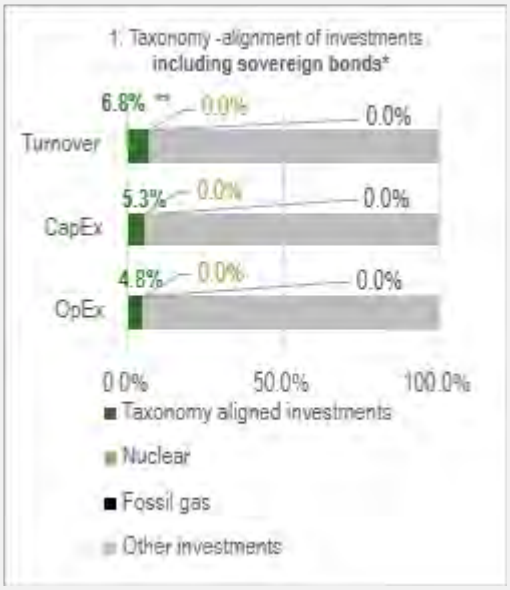

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

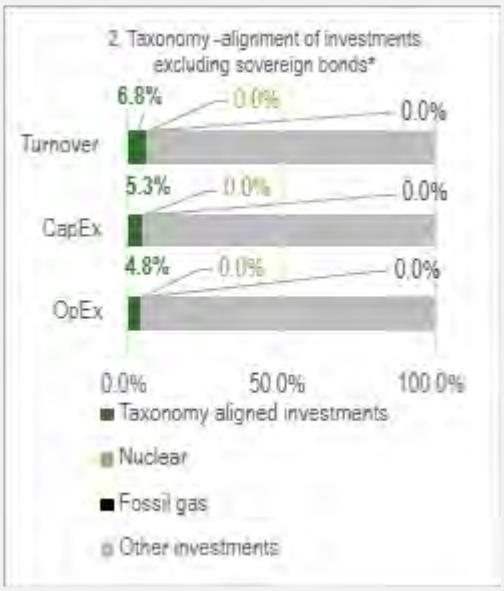

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No:

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

- *What was the share of investments made in transitional and enabling activities?*

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?*

	Revenue	Capex	Opex
2022*	0.4%	/	/
2023**	1.8%	/	/
2024***	5.1%	4.7%	4.1%
2025***	6.8%	5.3%	4.8%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the current level of data at the disposal of the management company at the time.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **27.9%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **21.3%** of the financial product.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

-The financial product excludes companies violating international norms, exposed to tobacco or controversial weapons, as well as companies active in sectors with possible negative impacts on the climate in accordance with the exclusion criteria defined in the Article 12. 1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission. The details on how the exclusions are applied, depending on the asset classes, are available on our website (https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ section « PAB exclusions for ESMA Guidelines »).

-The financial product complies, as part of its investment policy, with the list of exclusion criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ . As the financial product is a passively-managed ETF, the implementation of exclusions depends on the index provider's own ESG data and methodology

-The GHG intensity of the investee companies in portfolio is lower than that of the extra-financial investment universe (PAI 3).

- The percentage of companies of the financial product's portfolio without carbon emission reduction initiative is lower than that of its investment universe (Volontary Environmental PAI 4)

- The financial product shall comply with the eligible stock criteria by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

- The financial product shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.

- The financial product's investment universe of the investment strategy, as defined in the Prospectus, shall be reduced by a minimum of 30% due to exclusion of securities with low ESG score and/or sector exclusions and/or other extra-financial criteria.

- The financial product shall have the weighted average GHG emissions of its portfolio at least 50% lower than the weighted average GHG emissions of its investment universe

- The financial product shall achieve an annual decarbonisation target of at least 7%.

The financial product shall invest at least 35% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

The Bloomberg MSCI 3-5YCorp SRI Sustainable Select Ex Fossil Fuel PAB (EUR) RI Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: www.bloombergindices.com/.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*"

How did this financial product perform compared with the reference benchmark?

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

How did this financial product perform compared with the broad market index?

	GHG emissions [1,2]	ESG score[2]
Financial product	46.2	62.5
Broad market index[3]	77.9	60.8

(1) GHG emissions is calculated as the sum, for each GHG emissions of the investee company's (for the relevant scope), weighted by the ratio of the current value of the investment to the investee company's entreprise value.

(2) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) Bloomberg Euro Liquid Corporate 3 - 5 Year (EUR) RI

33 Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY EUR Corp bond SRI PAB 7-10Y **Legal Entity Identifier:** 213800E3SKY6YPAPAH81

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **51.2%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It made **sustainable investments with a social objective** : ___%

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using the methodology of the index provider. As such, the product is exposed to issuers that demonstrate superior or improve environmental and social practices, while implementing robust corporate governance practices withintheir sector of activity.

The investment strategy selects issuers through:

- A negative screening applying exclusion criteria. This is applied with regard to issuers with a poor ESG profile and issuers that are in systematic violation of the UN Global Compact.

- A positive screening using a selectivity approach. This involves evaluation of Environmental, Social, and Governance (ESG) performance of an issuer against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases, treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable, in collaboration with BNP Paribas Asset Management's Sustainability Centre.

The Bloomberg MSCI 7-10 Year Eur Corp SRI Sustainable Select Ex Fossil Fuel (EUR) RI Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

The following sustainability indicators are used to measure the attainment of the sustainable investment objective of the financial product, and are based on the reference benchmark ESG methodology:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The percentage of the financial product's portfolio compliant with the reference benchmark eligible stock criteria taking into account sectorial and controversial policies: **100%**

- The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology: **100%**

- The minimum percentage of the financial product's universe reduction due to exclusion of securities with low ESG score and/or sector exclusions and/or any other extra financial criteria: **30%**

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **51.2%**

...and compared to previous periods ?

Indicator	2024*	2025*	Comment
The percentage of the financial product's portfolio compliant with the reference benchmark eligible stock criteria taking into account sectorial and controversial policies	100%	100%	In line with the financial product's commitment
The percentage of the portfolio covered by the ESG analysis based on the ESG internal proprietary methodology	100%	100%	In line with the financial product's commitment
The minimum percentage of the financial product's investment universe reduction by sector due to exclusion of securities with low ESG score and/or sector exclusions and/or any other extra financial criteria;	20%	30%	In line with the financial product's commitment
The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation	51.3%	51.2%	In line with the financial product's commitment

* Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The investment manager is using, as of the date of the prospectus, the BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus,to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations (SFDR: Sustainability-related disclosures - BNP Paribas)

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31.12.2025

Largest investments**	Sector	% Assets*	Country**
BOOKING HOLDINGS INC 4.13 PCT 12-MAY-2033	Communications	1.52%	United States

MCDONALDS CORPORATION 0.88 PCT 04-OCT-2033	Consumer Discretionary	0.88%	United States

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

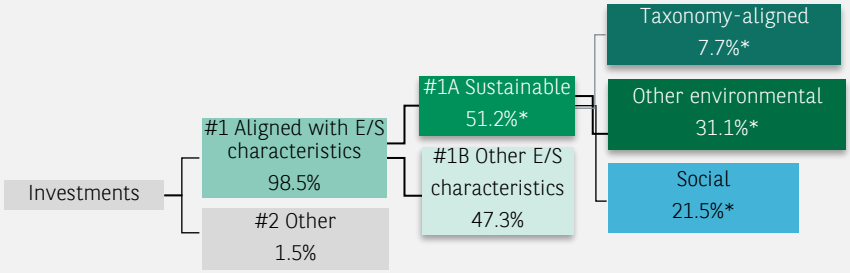

What was the asset allocation ?

Asset allocation describes the share of investments in specific assets.

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 98.5%.

The proportion of sustainable investments of the financial product is 51.2%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

Sectors (Level 2)	% Asset
Banking	24.0%
Telecommunications	14.3%
Real Estate	7.5%
Materials	7.1%
Health Care	7.0%
Insurance	6.6%
Financial Services	6.5%
Industrial Services	5.8%
Utilities	5.1%
Media	4.5%
Consumer Staple Products	3.7%
Industrial Products	2.4%
Consumer Discretionary Products	1.6%
Cash	1.4%
Retail & Whsle - Discretionary	1.3%
Consumer Discretionary Services	0.9%
Software & Tech Services	0.4%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No:

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

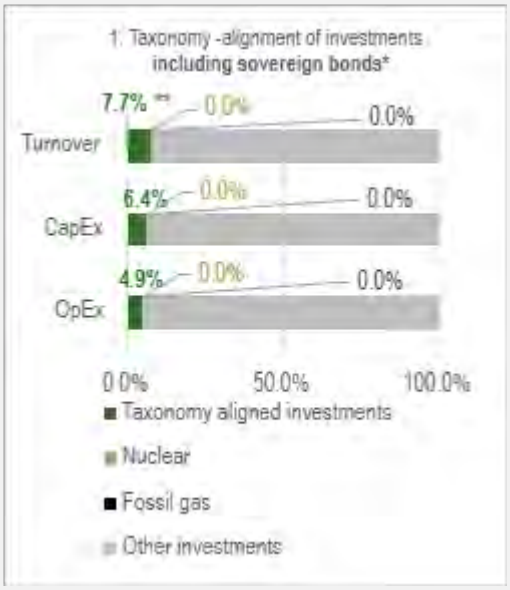

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

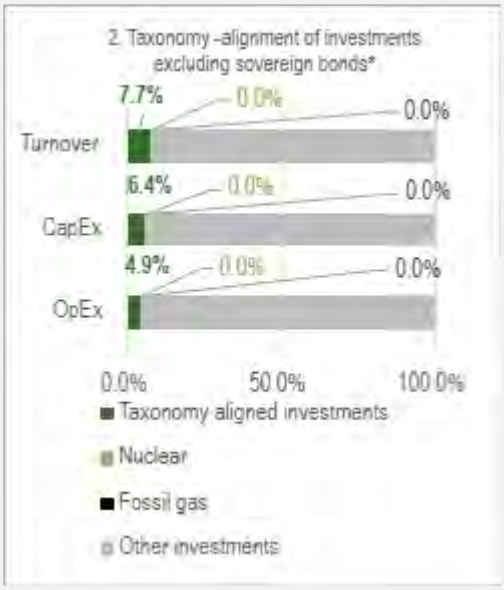

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

- *What was the share of investments made in transitional and enabling activities?*

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

- *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?*

	Revenue	Capex	Opex
2024* **	6.9%	6.9%	5.6%
2025* **	3.7%	6.4%	4.9%

* Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **31.1%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **21.5%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product excludes companies violating international norms, exposed to tobacco or controversial weapons, as well as companies active in sectors with possible negative impacts on the climate in accordance with the exclusion criteria defined in the Article 12. 1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission. The details on how the exclusions are applied, depending on the asset classes, are available on our website (https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ section « PAB exclusions for ESMA Guidelines »).

- The financial product shall comply with the eligible stock criteria by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

- The financial product shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.

- The financial product's investment universe of the investment strategy, as defined in the Prospectus, shall be reduced by a minimum of 30% due to exclusion of securities with low ESG score and/or sector exclusions and/or other extra-financial criteria.

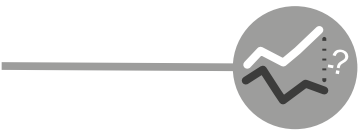

- The financial product shall have the weighted average GHG emissions of its portfolio at least 50% lower than the weighted average GHG emissions of its investment universe

- The financial product shall achieve an annual decarbonisation target of at least 7%

- The financial product shall invest at least 35% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

Bloomberg MSCI 7-10 Year Eur Corp SRI Sustainable Select Ex Fossil Fuel (EUR) RI index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: ww.bloombergindices.com.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*".

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared with the reference benchmark?

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

How did this financial product perform compared with the broad market index?

	GHG	ESG score[2]
Financial product	91.5	63.3
Broad market index[3]	107	63.3

(1) GHG emissions is calculated as the sum, for each GHG emissions of the investee company's (for the relevant scope), weighted by the ratio of the current value of the investment to the investee company's entreprise value. The ghg is expressed in tons of CO2 equivalent per million euros of entreprise value.

(2) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) Bloomberg Euro Aggregate Corp 7-10 (EUR) RI

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY EUR High Yield SRI Fossil Free **Legal Entity Identifier:** 213800P652PDIDTYSD10

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **46.4%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It made **sustainable investments with a social objective** : ___%

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using the methodology of the index provider. As such, the product is exposed to issuers that demonstrate superior or improve environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The investment strategy selects issuers through:

- A negative screening applying exclusion criteria. This is applied with regard to issuers with a poor ESG profile and issuers that are in systematic violation of the UN Global Compact.
- A positive screening using a selectivity approach. This involves evaluation of ESG performance of an issuer against a combination of environmental, social and governance factors which include but not limited to :

- Environmental: energy efficiency, reduction of emissions of greenhouse gases, treatment of waste;
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity);
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable, in collaboration with BNP Paribas Asset Management's Sustainability Centre.

The Bloomberg MSCI Euro High Yield SRI Sustainable ex Fossil Fuel (NTR) Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The weightings of Environmental (E), Social (S) and Governance (G) in MSCI's proprietary ESG rating methodology also used by Bloomberg indices may vary by sector, with some having weightings below 20%. Investors may find details on MSCI's ESG Rating Methodology Document via the following link: https://support.msci.com/support/emea-esg-and-climate-labels/explanation-of-esg-pillar/04461552866 - MSCI after creating an account.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The following sustainability indicators are used to measure the attainment of the sustainable investment objective of the financial product, and are based on the reference benchmark ESG methodology:

-The percentage of the financial product's portfolio compliant with the reference benchmark eligible universe exclusion criteria: **100%**

-The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology: **100%**

-The minimum percentage of the financial product's universe reduction due to exclusion of securities with low ESG score and/or sector exclusions and/or any other extra financial criteria: **30%**

-The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of SFDR: **46.4%**

...and compared to previous periods ?

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's portfolio compliant with the reference benchmark eligible universe exclusion criteria	100%	100%	100%	100%	In line with the financial product's commitment
The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology	100%	100%	100%	100%	In line with the financial product's commitment

The minimum percentage of the financial product's universe reduction due to exclusion of securities with low ESG score and/or sector exclusions and/or any other extra financial criteria	20.0%	20.0%	25.0%	30%	In line with the financial product's commitment
The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of SFDR	39.1%	41.9%	46%	46.4%	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The investment manager is using, as of the date of the prospectus, the BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus,to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive

institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation "POSITIVE" or "NEUTRAL" from the Sustainability Centre following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm "DNSH" principle) and should follow good governance practices. BNPP AM uses its proprietary methodology and/or relies on information provided by the reference benchmark administrator to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (Our sustainability policies and reports - BNP Paribas Asset Management - Corporate EN).

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

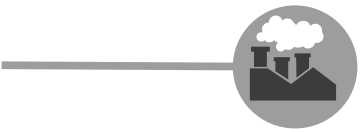

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

More detailed information on the manner in which BNPP AM considers principal adverse impacts of investment decisions on sustainability factors taking due account of the size, the nature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas .

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: From 31/12/2025

Largest investments**	Sector	% Assets*	Country**
ORGANON & CO 2.88 PCT 30-APR-2028	Health Care	0.81%	United States
IRON MOUNTAIN INC 4.75 PCT 15-JAN-2034	Real Estate	0.80%	United States
AMS OSRAM AG 10.50 PCT 30-MAR-2029	Technology	0.72%	Austria
ROSSINI SARL 6.75 PCT 31-DEC-2029	Health Care	0.71%	Luxembourg

Source of data: BNP Paribas Asset Management,calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

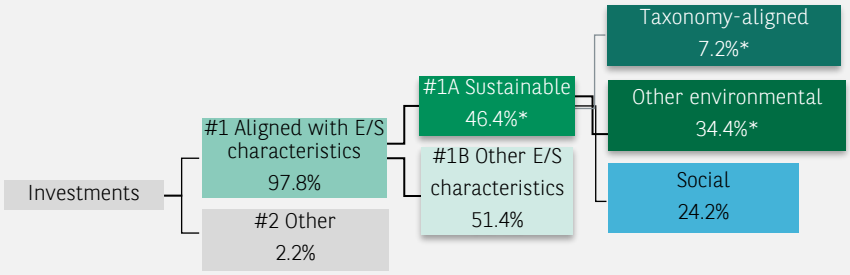

Asset allocation describes the share of investments in specific assets.

What was the asset allocation ?

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 97.8%.

The proportion of sustainable investments of the financial product is 46.4%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

Sectors	% Asset
Telecommunications	17.9%
Industrial Services	16.8%
Consumer Discretionary Products	12.6%
Banking	10.1%
Real Estate	9.5%
Materials	7.3%
Media	4.3%
Health Care	3.9%
Financial Services	3.8%
Industrial Products	3.3%
Retail & Whsle - Discretionary	3.2%
Consumer Staple Products	2.6%
Utilities	1.7%
Cash	1.1%
Tech Hardware & Semiconductors	1.0%
Consumer Discretionary Services	0.7%
Software & Tech Services	0.3%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

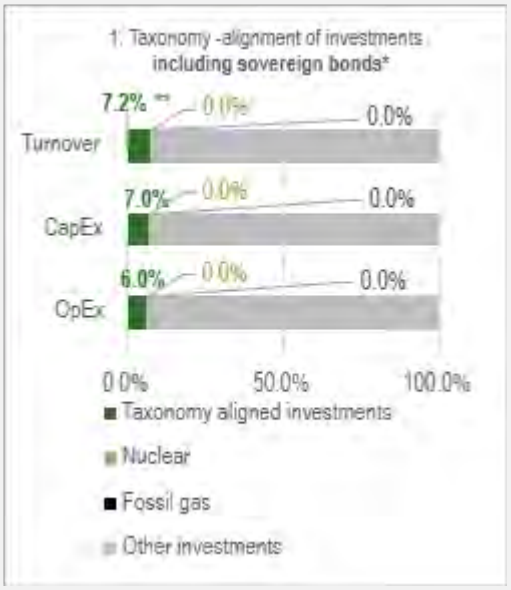

☒ No:

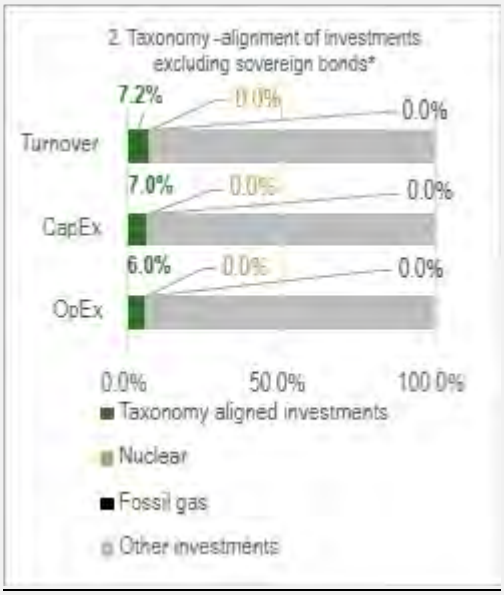

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2022*	1.0%	/	/
2023**	1.6%	/	/
2024***	4.4%	5.3%	4.4%
2025***	7.2%	7.0%	6.0%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the current level of data at the disposal of the management company at the time.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **34.4%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **24.2%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- the proportion of assets that are not used to meet environmental or social characteristics promoted by the financial product or
- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product excludes companies violating international norms, exposed to tobacco or controversial weapons, as well as companies active in sectors with possible negative impacts on the climate in accordance with the exclusion criteria defined in the Article 12. 1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission. The details on how the exclusions are applied, depending on the asset classes, are available on our website (https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ section « PAB exclusions for ESMA Guidelines »).

-The financial product complies, as part of its investment policy, with the list of exclusion criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/. As the financial product is a passively-managed ETF, the implementation of exclusions depends on the index provider's own ESG data and methodology.

-The GHG intensity of the investee companies in portfolio is lower than that of the extra-financial investment universe (PAI 3).

-The percentage of companies of the financial product's portfolio without carbon emission reduction initiative is lower than that of its investment universe (Volontary Environmental PAI 4)

--The financial product shall comply with the eligible stock criteria by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

- The financial product shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.

- The financial product's investment universe of the investment strategy, as defined in the Prospectus, shall be reduced by a minimum of 30% due to exclusion of securities with low ESG score and/or sector exclusions and/or other extra-financial criteria.

- The financial product shall have the weighted average carbon footprint of its portfolio at least 50% lower than the weighted average carbon footprint of its investment universe.

- The financial product shall invest at least 25% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "*What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives*" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

The Bloomberg MSCI Euro High Yield SRI Sustainable ex Fossil Fuel (NTR) Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: Indices | Bloomberg Professional Services

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the

environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*".

- *How did this financial product perform compared with the reference benchmark?*

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

- *How did this financial product perform compared with the broad market index?*

	GHG emissions[1]	ESG score[2]
Financial product	83.3	59,7
Broad market index[2]	136.4	56.8

(1) GHG emissions is calculated as the sum, for each GHG emissions of the investee company's (for the relevant scope), weighted by the ratio of the current value of the investment to the investee company's entreprise value. The ghg is expressed in tons of CO2 equivalent per million euros of entreprise value.

(2) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) Bloomberg Pan-European High Yield (EUR) RI

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP Paribas EASY FTSE EPRA Nareit Developed Europe Green CTB **Legal Entity Identifier: 2138001QCKOGYCCU9P13**

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective**: ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **79.7%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It made **sustainable investments with a social objective** : ___%

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using the methodology of the index provider. As such, the product is exposed to issuers that demonstrate superior or improve environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile compared to its investment universe.The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity);

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights.

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by external data providers.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable, in collaboration with BNP Paribas Asset Management's Sustainability Centre.

The FTSE EPRA Nareit Developed Green CTB (EUR) NR Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The percentage of the financial product's portfolio compliant with the reference benchmark eligible stock criteria taking into account sectorial and controversial policies: **100%**

-The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology: **100%**

- The average carbon footprint of the financial product's portfolio compared to the average carbon footprint of its investment universe: **3.7 vs 4.4 tCO2eq /Million € of Asset Value (FTSE EPRA Nareit Developed Europe (EUR) NR)**

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **79.7%**

***** Source: BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

...and compared to previous periods ?

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's portfolio compliant with the reference benchmark eligible stock criteria taking into account sectorial and controversial policies	100%	100%	100%	100%	In line with the financial product's commitment
The percentage of the portfolio covered by the ESG analysis based on the ESG internal proprietary methodology	100%	100%	100%	100%	In line with the financial product's commitment

The average carbon footprint of the financial product's portfolio compared to the average carbon footprint of its investment universe	4.7 vs 4.6	4.2 vs 4.8	3.5 vs 4.5	3.7 vs 4.4	In line with the financial product's commitment
The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation	38.1%	45.4%	66.9%	79.7%	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM.

*Source: BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. - *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The investment manager is using, as of the date of the prospectus, the BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus,to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality,

inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinationa Enterprises and UN Guiding Principles on Business & Human Rights, including the principle and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: on the 31/12/2025

Largest investments**	Sector	% Assets*	Country**
VONOVIA	Real Estate	9.04%	Germany
SWISS PRIME SITE AG N	Real Estate	8.48%	Switzerland
SEGRO REIT PLC REIT	Real Estate	5.16%	United Kingdom
GECINA SA REIT	Real Estate	4.81%	France
UNIBAIL RODAMCO WE STAPLED UNITS	Real Estate	4.23%	France
LEG IMMOBILIEN N	Real Estate	3.87%	Germany
SHAFTESBURY CAPITAL PLC REIT	Real Estate	2.92%	United Kingdom
SAGAX CLASS B B	Real Estate	2.87%	Sweden
BIG YELLOW GROUP PLC REIT	Real Estate	2.63%	United Kingdom
PSP SWISS PROPERTY AG N	Real Estate	2.63%	Switzerland
CATENA	Real Estate	2.50%	Sweden
KLEPIERRE REIT SA REIT	Real Estate	2.12%	France
BRITISH LAND REIT PLC REIT	Real Estate	2.10%	United Kingdom
LONDONMETRIC PROPERTY REIT PLC REIT	Real Estate	2.00%	United Kingdom
TRITAX BIG BOX REIT PLC REIT	Real Estate	1.90%	United Kingdom

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

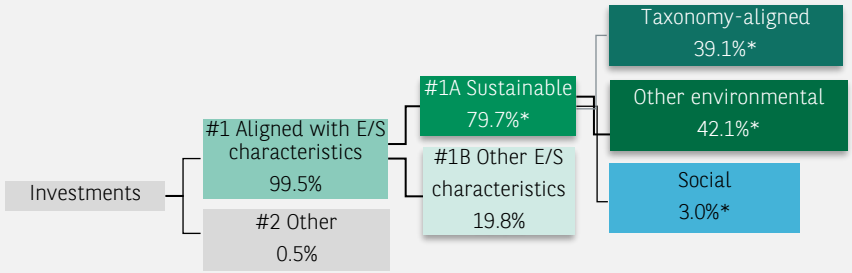

What was the asset allocation ?

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 99.5%.

The proportion of sustainable investments of the financial product is 79.7%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

- *In which economic sectors were the investments made ?*

Sectors	% Asset
Equity Real Estate Investment Trusts	50.48%
Real Estate Management & Development	48.89%
Cash	0.42%
Consumer Services	0.20%

Source of data: BNP Paribas Asset Management, alculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly .

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

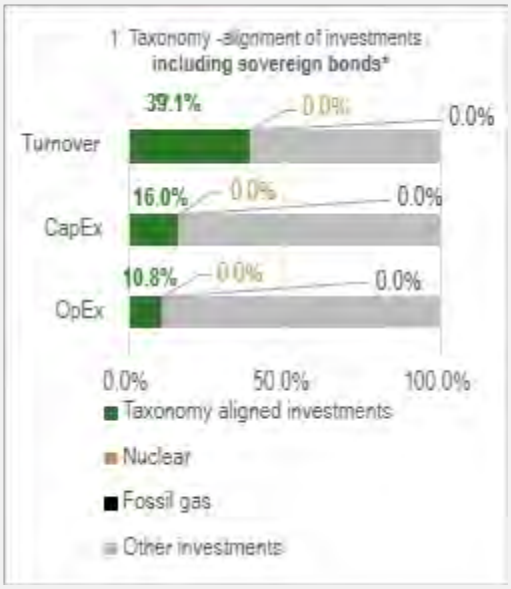

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

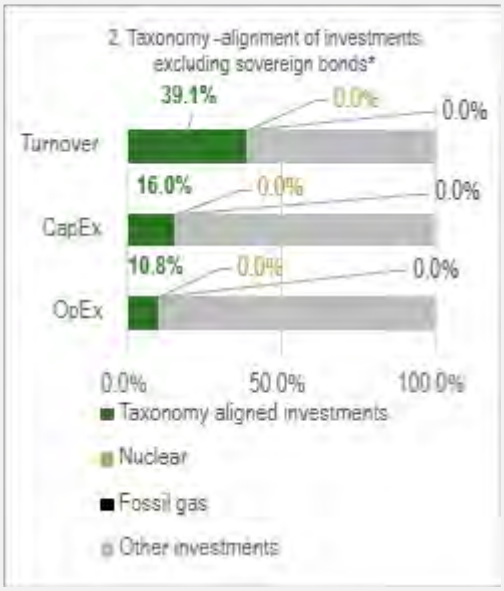

- ○ *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

  - ☐ Yes:
    - ☐ In fossil gas
    - ☐ In nuclear energy
  - ☒ No:

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2022*	12.8%	/	/
2023**	29.3%	/	/
2024***	39.9%	13.1%	8.6%
2025***	39.1%	16.0%	10.8%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the current level of data at the disposal of the management company at the time.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **42.1%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **3.0%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product excludes companies violating international norms, exposed to tobacco or controversial weapons, as well as companies active in sectors with possible negative impacts on the climate in accordance with the exclusion criteria defined in the Article 12. 1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission. The details on how the exclusions are applied, depending on the asset classes, are available on our website (https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ section « PAB exclusions for ESMA Guidelines »).

-The financial product shall comply with the eligible stock criteria by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

- The financial product shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.

- The financial product shall have the weighted average carbon footprint of its portfolio at least 30% lower than the weighted average carbon footprint of its investment universe.

- The financial product shall achieve an annual decarbonisation target of at least 7%.

The financial product shall invest at least 30% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: https://www.bnpparibas-am.com/en/sustainability-documents/

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

The FTSE EPRA Nareit Developed Green CTB (EUR) NR Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: www.ftserussell.com.

- *How does the reference benchmark differ from a broad market index?*

  The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*"

- *How did this financial product perform compared with the reference benchmark?*

  Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

- *How did this financial product perform compared with the broad market index?*

	Carbon footprint (tCO2 eq/EV) [1,2]	ESG score[2]
Financial product	3.7	61.3
Broad market index[3]	4.4	61.1

(1) The carbon footprint is the sum of each carbon emission divided by its simplified enterprise value, multiplied by the weight in the portfolio. Carbon emissions represent the sum of a company's scope 1 (direct emissions from installations) and scope 2 (indirect emissions linked to the company's energy consumption) emissions. Simplified enterprise value measures a total value and is calculated as the sum of market capitalization and total debt. The footprint is expressed in tons of CO_2 equivalent per million euros of entreprise value.

(2) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) FTSE EPRA NAREIT Developed Europe ex-UK (EUR) NR

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY GLOBAL AGGREGATE BOND SRI FOSSIL FREE **Legal Entity Identifier:** 213800B5H4Q75CRRBX50

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **21.8%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It made **sustainable investments with a social objective** : ___%

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using the methodology of the index provider. As such, the product is exposed to issuers that demonstrate superior or improve environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The investment strategy selects issuers through:

- A negative screening applying exclusion criteria. This is applied with regard to issuers with a poor ESG profile and issuers that are in systematic violation of the UN Global Compact.
- A positive screening using a selectivity approach. This involves evaluation of ESG performance of an issuer against a combination of environmental, social and governance factors which include but not limited to :

- Environmental: energy efficiency, reduction of emissions of greenhouse gases, treatment of waste;
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity);
- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable, in collaboration with BNP Paribas Asset Management's Sustainability Centre.

The Bloomberg MSCI Global Aggregate ex Fossil Fuel SRI Select (USD) RI index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The following sustainability indicators are used to measure the attainment of the sustainable investment objective of the financial product, and are based on the reference benchmark ESG methodology:

-The percentage of the financial product's portfolio compliant with the reference benchmark eligible universe exclusion criteria: **100%**

-The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology: **99.6%**

-The minimum percentage of the financial product's universe reduction due to exclusion of securities with low ESG score and/or sector exclusions and/or any other extra financial criteria: **20%**

-The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of SFDR: **21.8%**

...and compared to previous periods ?

Non applicable for the first periodic report.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The investment manager is using, as of the date of the prospectus, the BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus,to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria

can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive

institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation "POSITIVE" or "NEUTRAL" from the Sustainability Centre following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm "DNSH" principle) and should follow good governance practices. BNPP AM uses its proprietary methodology and/or relies on information provided by the reference benchmark administrator to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (Our sustainability policies and

reports - BNP Paribas Asset Management - Corporate EN).

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts indicators are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which BNPP AM considers principal adverse impacts of investment decisions on sustainability factors taking due account of the size, the nature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas .

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31/12/2025

Largest investments**	Sector	% Assets*	Country**
BNPP INSC USD 1D LVNAV X C	Funds	7.99%	Luxembourg

Source of data: BNP Paribas Asset Management,calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

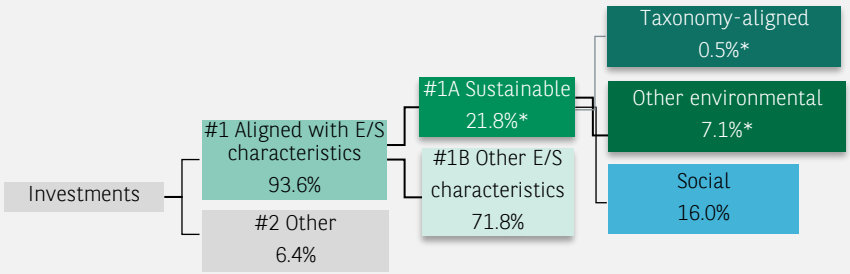

Asset allocation describes the share of investments in specific assets.

What was the asset allocation ?

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 93.6%.

The proportion of sustainable investments of the financial product is 21.8%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

Sectors (level 2)	% Asset
National	66.5%
Other	10.6%
Money Market Fund	8.0%
Banking	6.9%
Financial Services	3.4%
Health Care	2.7%
Supranationals	2.1%
Regional & Local	1.9%
Telecommunications	1.5%
Tech Hardware & Semiconductors	1.1%
Insurance	0.9%
Software & Tech Services	0.8%
Retail & Whsle - Discretionary	0.6%
Consumer Staple Products	0.6%
Media	0.4%
Industrial Products	0.4%
Industrial Services	0.2%
Utilities	0.2%
Consumer Discretionary Products	0.2%
Real Estate	0.2%
Materials	0.1%
Cash	-9.3%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No:

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

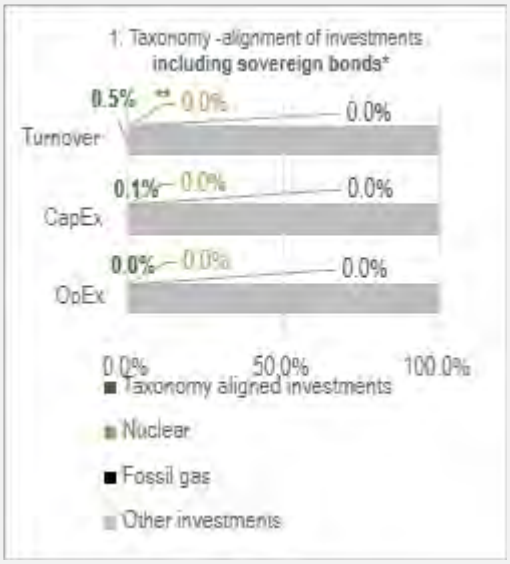

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

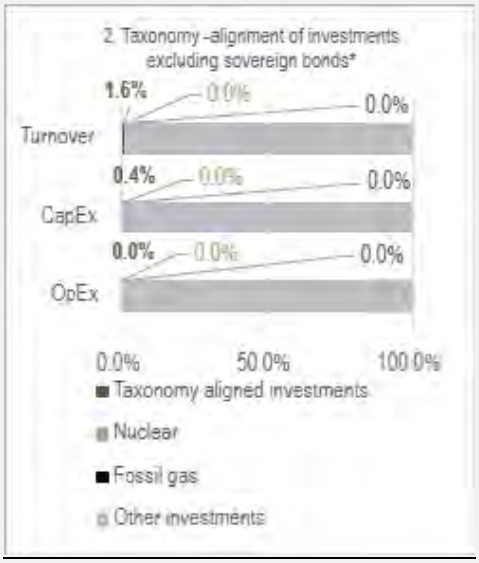

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

- *What was the share of investments made in transitional and enabling activities?*

  The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

- *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?*

  Non applicable for the first periodic report.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **7.1%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **16.0%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include:

- the proportion of assets that are not used to meet environmental or social characteristics promoted by the financial product or

- instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives.

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product shall comply with the eligible stock criteria by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

- The financial product shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.

- The financial product's investment universe of the investment strategy, as defined in the Prospectus, shall be reduced by a minimum of 20% due to exclusion of securities with low ESG score and/or sector exclusions and/or other extra-financial criteria.

- The financial product shall invest at least 10% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "*What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives*" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

Bloomberg MSCI Global Aggregate ex Fossil Fuel SRI Select (USD) RI Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: Indices | Bloomberg Professional Services

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*".

How did this financial product perform compared with the reference benchmark?

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

How did this financial product perform compared with the broad market index?

	Carbon footprint (tCO2 eq/EV) [1,2]	ESG score[2]
Financial product	4.8	55.2
Broad market index[2]	14.0	55.0

(1) The carbon footprint is the sum of each carbon emission divided by its simplified enterprise value, multiplied by the weight in the portfolio. Carbon emissions represent the sum of a company's scope 1 (direct emissions from installations) and scope 2 (indirect emissions linked to the company's energy consumption) emissions. Simplified enterprise value measures a total value and is calculated as the sum of market capitalization and total debt. The footprint is expressed in tons of CO_2 equivalent per million euros of entreprise value.

(2) Source: BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) Bloomberg MSCI Global Aggregate ex Fossil Fuel SRI Select (USD) RI

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY GLOBAL CORP BOND **Legal Entity Identifier: 213800YMLKXZE9BEI765**

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective**: ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective** : ___%

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **50.0%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social and Governance (ESG) criteria using an internal ESG proprietary methodology, and by investing in issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC Policy).

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the RBC Policy: **100%**

- The percentage of the financial product's portfolio covered by the ESG analysis based on the ESG internal proprietary methodology: **100%**

- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe: **62.6 VS 52.9 (Bloomberg Global Corporate IG Select (USD) RI)**

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **50.0%**

...and compared to previous periods ?

Indicator	2024*	2025*	Comment
The percentage of the financial product's portfolio compliant with the RBC Policy	100%	100%	In line with the financial product's commitment
The percentage of the portfolio covered by the ESG analysis based on the ESG internal proprietary methodology	100%	100%	In line with the financial product's commitment
The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus	67.2 VS 60.0	62.6 VS 52.9	In line with the financial product's commitment
The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation	48.3%	50.0%	In line with the financial product's commitment

* Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The investment manager ensures that throughout its investment process, the financial product takes into all the account principal all the adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process : RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and

construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

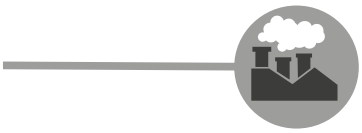

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the investment manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and the construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es"(Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support all investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Policy, Engagement and Voting Policy and include the following:

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts;

- In case of equity holings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues.

- Ensuring all securities included in the portfolio have supportive ESG research.

- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas

8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations (Sustainability - BNPP AM Luxembourg private investor)

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31.12.2025

Largest investments**	Sector	% Assets*	Country**
PACIFIC GAS AND ELECTRIC COMPANY 5.80 PCT 15-MAY-2034	Utilities	0.52%	United States

Source of data: BNP Paribas Asset Management,calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

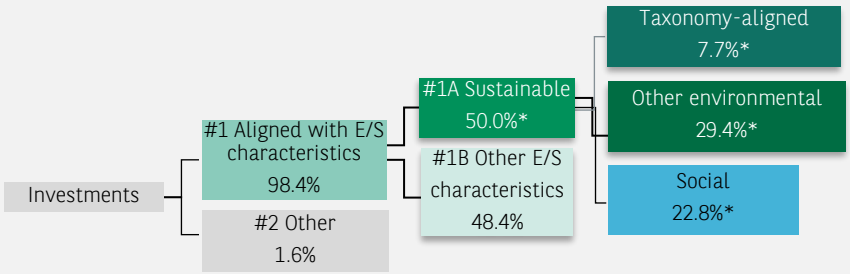

What was the asset allocation ?

Asset allocation describes the share of investments in specific assets.

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 98.4%.

The proportion of sustainable investments of the financial product is 50.0%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

- *In which economic sectors were the investments made ?*

Sectors (level 2)	% Asset
Banking	20.6%
Health Care	10.4%
Utilities	8.4%
Financial Services	8.2%
Industrial Services	6.2%
Insurance	6.2%
Consumer Staple Products	4.8%
Real Estate	4.5%
Consumer Discretionary Products	4.4%
Telecommunications	4.1%
Materials	3.7%
Tech Hardware & Semiconductors	3.5%
Industrial Products	3.4%
Software & Tech Services	2.8%
Media	2.7%
Retail & Whsle - Discretionary	1.8%
Cash	1.5%
Retail & Wholesale - Staples	1.1%
Consumer Discretionary Services	0.9%
Derivatives	0.7%
Oil & Gas	0.3%
Renewable Energy	0.2%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

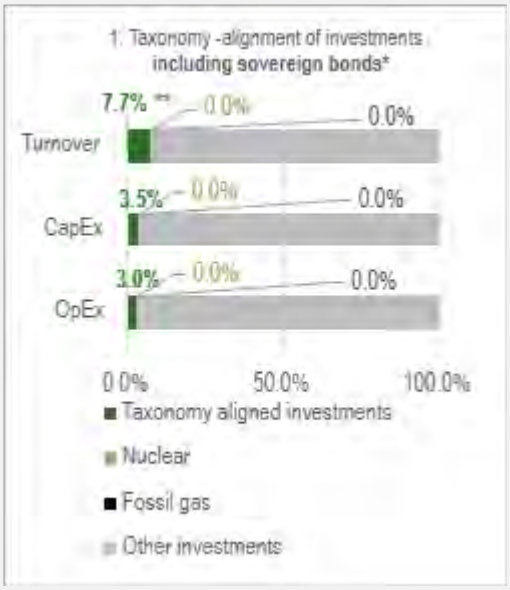

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

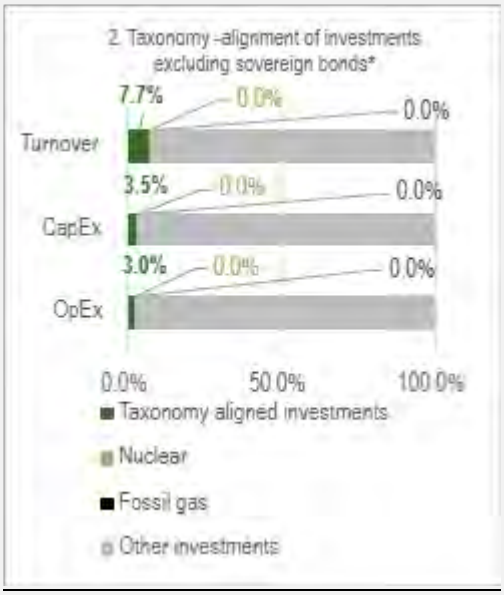

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

✖ No:

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- *What was the share of investments made in transitional and enabling activities?*

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

- *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?*

	Revenue	Capex	Opex
2024*	7.4%	3.2%	2.8%
2025*	7.7%	3.5%	3.0%

* Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **29.4%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **22.8%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product investment strategy shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal,

controversial weapons, asbestos, ...), as these companies are deemed to be In violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (Our sustainability policies and reports - BNP Paribas Asset Management - Corporate EN).

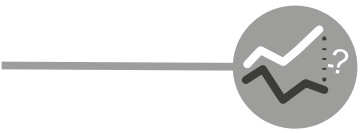

- The financial product shall have at least 90% of its assets (excluding ancillary liquid assets) covered by the ESG analysis based on the ESG internal proprietary methodology.

- The financial product shall have the weighted average ESG score of its portfolio higher than the weighted average ESG score of its investment universe, as defined in the Prospectus.

- The financial product shall invest at least 20% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "*What were the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives*" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules. In addition, the management company has implemented a voting and engagement policy.

Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

  Not applicable.

- *How did this financial product perform compared with the broad market index?*

  Not applicable.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS EASY Growth Europe **Legal Entity Identifier:** 2138007UCTC3TWGFG972

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective** : ___%

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **55.0%** of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using ESG external and/or internal proprietary methodology(ies). As such, the product is exposed to issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The investment strategy selects issuers through:

- o A positive screening using a selectivity approach. This involves evaluation of Environmental, Social, and Governance (ESG) performance of an issuer against a combination of environmental, social and governance factors which include but not limited to :
  - Environmental: energy efficiency, reduction of emissions of greenhouse gases, treatment of waste;

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity);

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights.

o A negative screening applying exclusion criteria with regard to issuers that are in violation of international norms and convention, such as the UN Nations Global Compact principles and OECD Guidelines for Multinational Enterprises, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC) policy.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights, according to the Stewardship policy, where applicable.

In synthetic replication, engagement with issuers and exercise of voting rights, if any, are only applied for the Financing Assets underlying securities.

The BNP Paribas Growth Europe ESG (EUR) RI Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The percentage of the financial product's economic exposure compliant with the RBC policy: **100%**

- The percentage of the financial product's economic exposure covered by the ESG analysis based on external and/or ESG proprietary methodology(ies): **100%**

- The minimum percentage of the financial product's economic exposure investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC policy and/or any other extra financial criteria: **20%**

- The weighted average ESG score of the financial product's economic exposure compared tothe weighted average ESG score of its investment universe: **62.2 vs 61.0 (BNP Paribas Growth Europe ESG (EUR) RI)*.**

- The percentage of the financial product's economic exposure in "sustainable investments" as defined in Article 2 (17) of SFDR: **55.0%**

* Source: BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

- *...and compared to previous periods ?*

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's economic exposure compliant with the RBC policy	100%	100%	100%	100%	In line with the financial product's commitment
The percentage of the financial product's economic exposure covered by the ESG analysis based on external and/or ESG proprietary methodology(ies)	100%	100%	100%	100%	In line with the financial product's commitment
The minimum percentage of the financial product's economic exposure investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC policy and/or any other extra financial criteria	20%	20.0%	20.0%	20%	In line with the financial product's commitment
The weighted average ESG score of the financial product's economic exposure compared tothe weighted average ESG score of its investment universe	64.2 vs 59.4	64.6 vs 59.4	63.3 vs 59.9	62.2 vs 61.0	In line with the financial product's commitment
The percentage of the financial product's reference benchmark economic exposure in "sustainable investments" as defined in Article 2 (17) of SFDR	52.2%	56.7%	59.2%	55.0%	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quarterly weighted average.
***Figures reported in 2024 and 2025 are expressed as a quarterly weighted based on the AUM.

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

As of the date of the annual report, the financial product applies synthetic replication. Consequently, the sustainable investments to which the financial product is exposed and described below are the ones of the underlying securities of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

The investment manager is using, as of the date of the prospectus, the BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus,to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

In synthetic replication, engagement with issuers and exercise of voting rights, if any, are only applied for the Financing Assets underlying securities.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector

5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicators
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions :

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts

- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

In synthetic replication, engagement with issuers and exercise of voting rights, if any, are only applied for the Financing Assets underlying securities.

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy
Sovereign mandatory indicators
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

What were the top investments of this financial product?

The financial product applies synthetic replication.
The top investments disclosed below are therefore twofold:

- The assets physically held at the level of the financial product
- The assets of the reference benchmark underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31.12.2025

Assets physically held at the level of the financial product:

Largest investments**	Sector	% Assets*	Country**
COMMERZBANK AG	Financials	9,71%	Germany
ABN AMRO BANK NV	Financials	9,36%	Netherlands
INTESA SANPAOLO	Financials	8,18%	Italy
FERRARI NV	Consumer Discretionary	8,01%	Italy
BNPP MOIS ISR I C	Cash	5,30%	France
UNICREDIT	Financials	4,83%	Italy
DEUTSCHE BANK AG N	Financials	4,77%	Germany
ING GROEP NV	Financials	4,48%	Netherlands
SIEMENS HEALTHINEERS AG	Health Care	4,32%	Germany
SAMPO CLASS A	Financials	4,20%	Finland
MERCEDES-BENZ GROUP N AG N	Consumer Discretionary	3,84%	Germany

UNIVERSAL MUSIC GROUP NV	Communication	2,03%	Netherlands

Source of data: BNP Paribas Asset Management, calculated on 31/12/2025.
The largest investments are based on the underlying portfolio data of the investment strategy and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

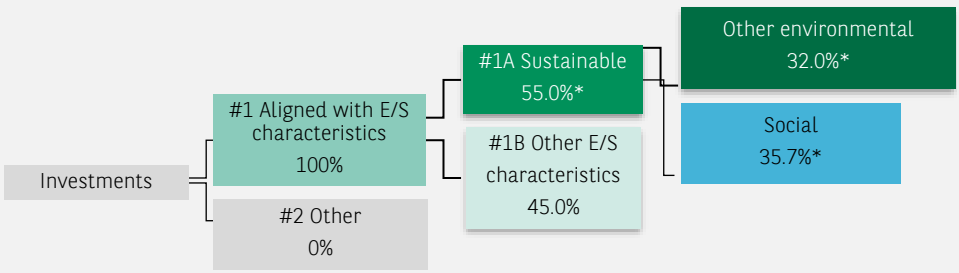

What was the asset allocation ?

As of the date of the annual report, the financial product applies synthetic replication. Consequently, the asset allocation for this financial product is the ones of the underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is **100%.**

The proportion of sustainable investments of the financial product is **55.0%.**

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

Asset allocation describes the share of investments in specific assets.

The financial product applies synthetic replication.
The top investments disclosed below are therefore twofold:

- The assets physically held at the level of the financial product

- The assets of the reference benchmark underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

Assets physically held at the level of the financial product:

Sectors (Level 2)	% Asset
Banks	37,65%
Insurance	18,72%
Automobiles & Components	15,09%
Capital Goods	9,22%
Cash	7,86%
Health Care Equipment & Services	4,32%
Financial Services	3,00%
Commercial & Professional Services	2,70%
Materials	1,44%

Source of data: BNP Paribas Asset Management, calculated on 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

Assets of the reference benchmark underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy:

Sectors	% Asset
Industrials	27,4%
Financials	15,9%
Consumer Discretionary	13,5%
Health Care	13,1%
Information Technology	9,5%
Communication Services	8,1%
Utilities	6,8%
Energy	2,8%
Consumer Staples	2,0%
Real Estate	0,5%
Materials	0,2%

Source of data: BNP Paribas Asset Management, calculated on 31/12/2025.
The sector breakdown is based on the underlying portfolio data of the investment strategy and is based on the transaction date.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, and it did not do so.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

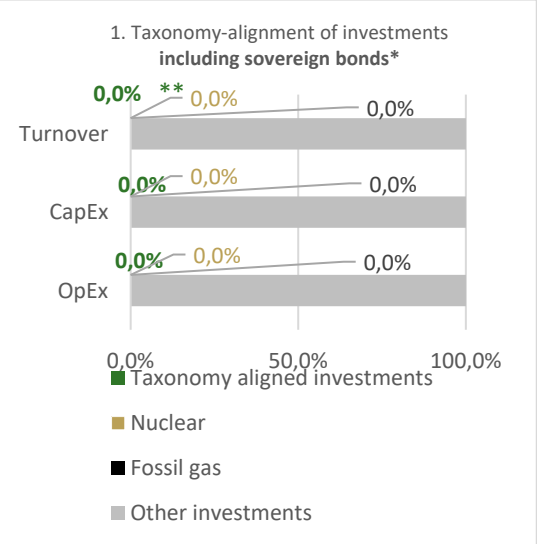

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

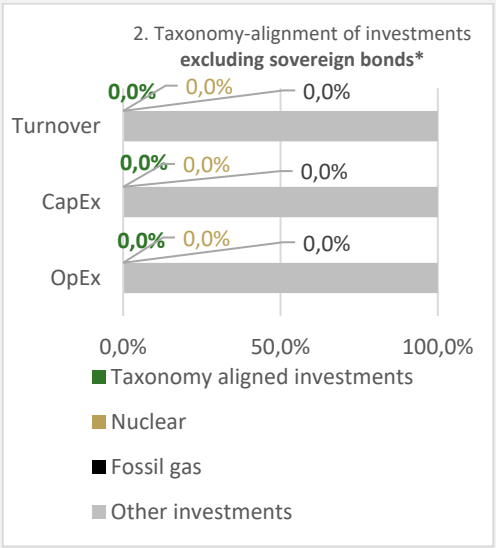

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No:

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

- *What was the share of investments made in transitional and enabling activities?*

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

- *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?*

	Revenue	Capex	Opex
2022*	0%	/	/

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

2023**	0%	/	/
2024***	0%	0%	0%
2025***	0%	0%	0%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quarterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM.

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the level of data at the disposal of the management company at the time.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **32.0%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **35.7%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

The financial product investment strategy shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal,

controversial weapons, asbestos,...), as these companies are deemed to be In violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)

- The financial product investment strategy shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the proprietary and/or external ESG methodology.

- The financial product's investment universe of the investment strategy shall be reduced by a minimum of 20% due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC Policy and/or other extra-financial criteria.

- The financial product shall have the weighted average ESG score of its investment strategy portfolio higher than the weighted average ESG score of its investment universe.

- The financial product shall have the weighted average greenhouse gas (GHG) intensity of its investment strategy portfolio lower than the weighted average greenhouse gas (GHG) intensity of its investment universe.

- The financial product shall invest at least 40% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR and as disclosed in the asset allocation below. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus

  There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance, between two strategy reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the reference benchmark administrator rules.

  In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: https://www.bnpparibas-am.com/en/sustainability-documents/

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

The BNP Paribas Growth Europe ESG (EUR) RI Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: https://indx.bnpparibas.com/nr/FELETR.pdf.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "How did the sustainability indicators perform?"

- *How did this financial product perform compared with the reference benchmark?*

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

- *How did this financial product perform compared with the broad market index?*

	Carbon footprint (tCO2 eq/EV) [1,2]	ESG score[2]
Financial product	33.8	62.2
Broad market index[3]	63.6	61.0

(1) The carbon footprint is the sum of each carbon emission divided by its simplified enterprise value, multiplied by the weight in the portfolio. Carbon emissions represent the sum of a company's scope 1 (direct emissions from installations) and scope 2 (indirect emissions linked to the company's energy consumption) emissions. Simplified enterprise value measures a total value and is calculated as the sum of market capitalization and total debt. The footprint is expressed in tons of CO2 equivalent per million euros of entreprise value

(2) Source: BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) BNP Paribas Growth Europe (EUR) RI

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY JPM ESG EMBI GLOBAL DIVERSIFIED COMPOSITE

Legal Entity Identifier: 2138001R57QT53OEIE75

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **3.0%** of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It made **sustainable investments with a social objective** : ___%

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The investment strategy selects and allocates exposure to sovereign and quasi-sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using third party sovereign methodology that involves evaluation of a country against a combination of environmental, social and governance factors, which include but are not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution;

- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital;

- Governance: business regulations, corruption, democratic life, political stability, security.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

The JPM ESG EMBI Global Diversified Composite (USD) RI index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's sovereign bonds economic exposure covered by the ESG analysis based on the third party ESG methodology used by the index provider; **95.7%**

- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe: **46.6 vs 46.3 (JPM EMBI Global Diversified (USD) RI)**

...and compared to previous periods ?

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's sovereign bonds economic exposure covered by the ESG analysis based on the third party ESG methodology used by the index provider;	100%	100%	100%	95.7%	In line with the financial product's commitment
The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe	47.4 vs 47.0	45.8 vs 42.7	45.6 vs 42.0	46.6 vs 46.3	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quaterly weighted average based on the AUM.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The financial product does not intend to make any sustainable investment

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The financial product does not intend to make any sustainable investment

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable.

- - - *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Not applicable..

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers some principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The overall policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process of the investment strategy in relation with social violations and human rights.
2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy.
3- Engagement with policymakers.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Sovereign mandatory indicators:

15. GHG intensity

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31.12.2025

Largest investments**	Sector	% Assets*	Country**

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

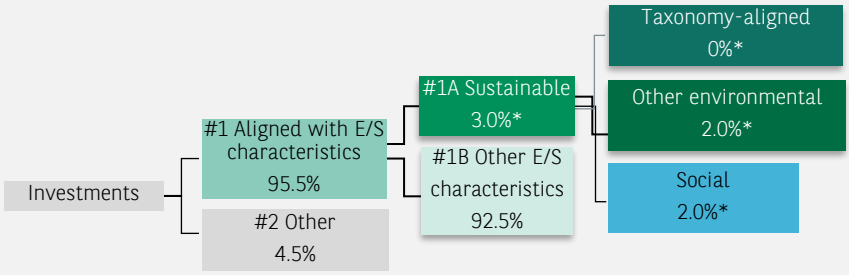

What was the asset allocation ?

Asset allocation describes the share of investments in specific assets.

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 95.5%.

The proportion of sustainable investments of the financial product is 3.0%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

Sectors	% Asset
National	93.0%
Financial Services	2.1%
Materials	1.5%
Derivatives	1.0%
Industrial Services	0.7%
Cash	0.7%
Utilities	0.5%
Oil & Gas	0.3%
Insurance	0.1%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, and it did not do so.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

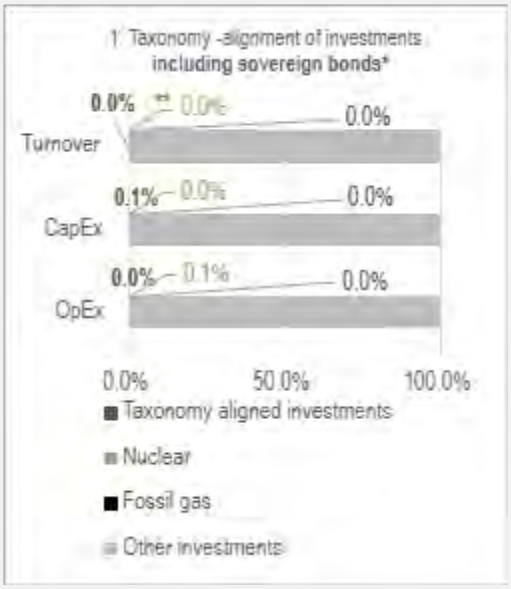

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

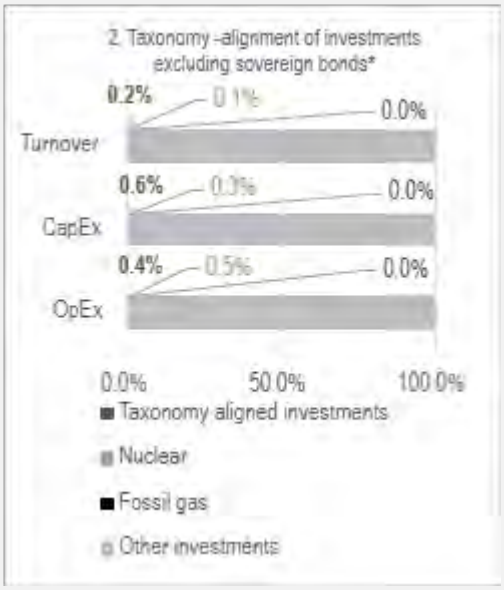

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No:

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

- *What was the share of investments made in transitional and enabling activities?*

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?*

	Revenue	Capex	Opex
2022*	0.0%	/	/
2023**	0.0%	/	/
2024***	0.0%	0.0%	0.0%
2025***	0.0%	0.1%	0.0%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quarterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM.

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the level of data at the disposal of the management company at the time.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **2.0%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **2.0%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

In accordance with its investment strategy, the financial product does not invest in corporate issuers. As such, it cannot invest in companies in accordance with the article 12.1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission.

- The financial product investment strategy shall have at least 90% of its investment strategy underlying issuers covered by the ESG analysis based on the index provider ESG methodology.

- The financial product investment strategy excludes issuers ranked in band 5 from the index. The index provider's ESG methodology scores are divided into five bands, where band 1 has the highest ESG score and band 5 has the lowest ESG score

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

The JPM ESG EMBI Global Diversified Composite (USD) index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: www.jpmorgan.com.

- *How does the reference benchmark differ from a broad market index?*

  The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*"

- *How did this financial product perform compared with the reference benchmark?*

  Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

How did this financial product perform compared with the broad market index?

	Carbon footprint (tCO2 eq/EV) [1,2]	ESG score[2]
Financial product	24.1	46.6
Broad market index[3]	20.3	46.3

(1) The carbon footprint is the sum of each carbon emission divided by its simplified enterprise value, multiplied by the weight in the portfolio. Carbon emissions represent the sum of a company's scope 1 (direct emissions from installations) and scope 2 (indirect emissions linked to the company's energy consumption) emissions. Simplified enterprise value measures a total value and is calculated as the sum of market capitalization and total debt. The footprint is expressed in tons of CO_2 equivalent per million euros of entreprise value.

(2) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) JPM EMBI Global Diversified (USD) RI

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY JPM ESG EMU GOVERNMENT BOND IG

Legal Entity Identifier: 213800DHNJL4OZOFAU25

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

- ☐ Yes
- ☒ No

- ☐ It made **sustainable investment with an environmental objective**: ___%
  - ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☐ It made **sustainable investments with a social objective** : ___%
- ☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **8.9%** of sustainable investments
  - ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
  - ☐ with a social objective
- ☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The investment strategy selects and allocates exposure to sovereign and quasi-sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using third party sovereign methodology that involves evaluation of a country against a combination of environmental, social and governance factors, which include but are not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution;

- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital;

- Governance: business regulations, corruption, democratic life, political stability, security.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

The J.P. Morgan ESG EMU Government Bond IG (EUR) RI Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's sovereign bonds economic exposure covered by the ESG analysis based on the third party ESG methodology used by the index provider; **100%**

- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe: **59.4 vs 58.0 (J.P. Morgan GBI EMU 1-3 years LOC (EUR) NR)**

...and compared to previous periods ?

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's sovereign bonds economic exposure covered by the ESG analysis based on the third party ESG methodology used by the index provider;	100%	100%	100%	100%	In line with the financial product's commitment
The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe	56.3 vs 56.8	59.0 vs 57.7	59.8 vs 58.3	59.4 vs 58.0	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quarterly weighted average.
***Figures reported in 2024 and 2025 are expressed as a quarterly weighted based on the AUM.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The financial product does not intend to make any sustainable investment.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The financial product does not intend to make any sustainable investment.

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable

- - - *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Not applicable

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers some principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The overall policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process of the investment strategy in relation with social violations and human rights.
2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy.
3- Engagement with policymakers.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Sovereign mandatory indicators:

15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31.12.2025

Largest investments**	Sector	% Assets*	Country**
FRANCE (REPUBLIC OF) 2.50 PCT 25-MAY-2030	Government	1.82%	France

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

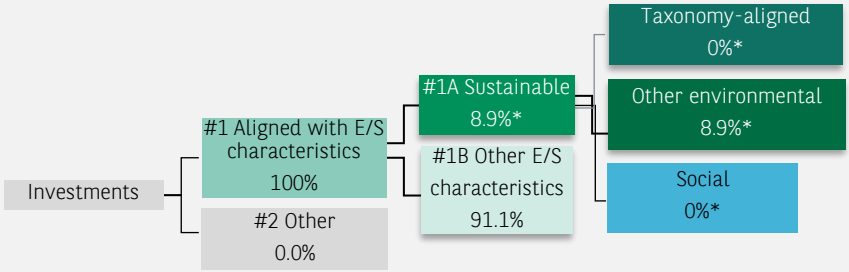

Asset allocation describes the share of investments in specific assets.

What was the asset allocation ?

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 100%.

The proportion of sustainable investments of the financial product is 8.9%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

- *In which economic sectors were the investments made ?*

Sectors (Level 2)	% Asset
National	98,9%
Other	0,8%
Cash	0,3%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, and it did not do so.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No:

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

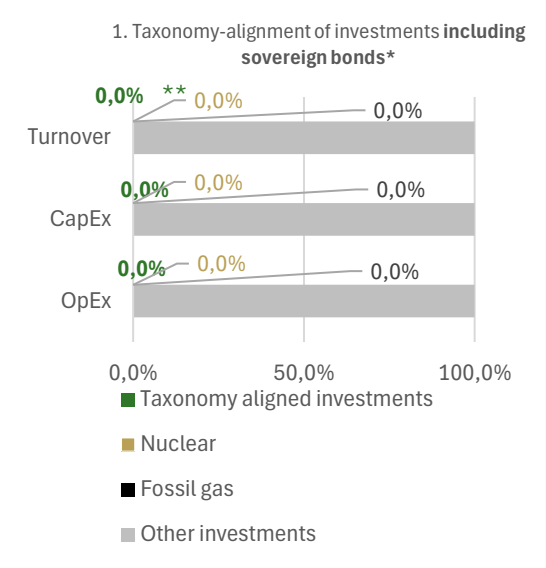

Taxonomy-aligned activities are expressed as a share of:

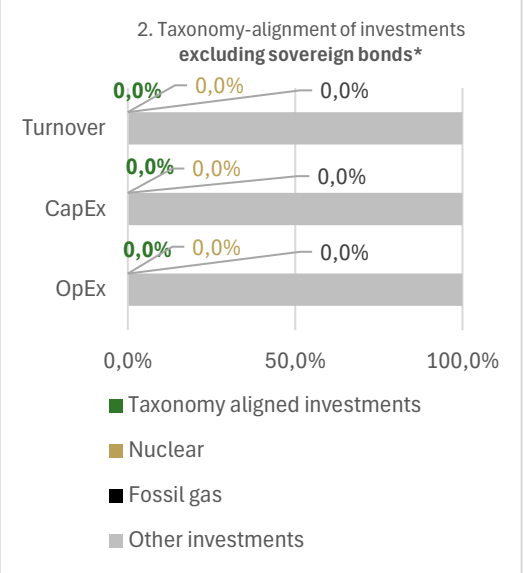

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2022*	0%	/	/
2023**	0%	/	/
2024***	0%	0%	0%
2025***	0%	0%	0%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quarterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM.

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the level of data at the disposal of the management company at the time.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **8.9%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **0%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The third party methodology used by the index provider is applied to tilt issuers ranked higher on ESG criteria and to underweight or remove issuers that rank lower.

- The financial product investment strategy excludes issuers ranked in band 9 and 10 from the index. The index provider's ESG methodology scores are divided into 10 bands, where band 1 has the highest ESG score and band 10 has the lowest ESG score,

- The financial product investment strategy shall have at least 90% of its investment strategy underlying issuers covered by the ESG analysis based on the index provider ESG methodology.

-The financial product invests in securities issued by eligible states following the conditions of the Central Labelling Agency (CLA) of the Towards Sustainability label dated as of October 6, 2023.

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

The J.P. Morgan ESG EMU Government Bond IG (EUR) RI Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: www.jpmorgan.com.

- *How does the reference benchmark differ from a broad market index?*

  The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*"

- *How did this financial product perform compared with the reference benchmark?*

  Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

- *How did this financial product perform compared with the broad market index?*

	ESG score[1]
Financial product	59.4
Broad market index[3]	58.0

(1) **Source:** BNP Paribas Asset Management. ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

- ☐ Yes
- ☒ No

- ☐ It made **sustainable investment with an environmental objective:** ___%
  - ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **0.7%** of sustainable investments
  - ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
  - ☐ with a social objective
- ☐ It made **sustainable investments with a social objective** : ___%
- ☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The investment strategy selects and allocates exposure to sovereign and quasi-sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using third party sovereign methodology that involves evaluation of a country against a combination of environmental, social and governance factors, which include but are not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution;

- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital;

- Governance: business regulations, corruption, democratic life, political stability, security.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

The J.P. Morgan ESG EMU Government Bond IG 1-3 Year (TR) Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's sovereign bonds economic exposure covered by the ESG analysis based on the third party ESG methodology used by the index provider; **100%**

- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe: **57.3 vs 57.3 (J.P. Morgan EMU Government Bond IG 1-3 Year (EUR) RI)**

...and compared to previous periods ?

Indicator	2023*	2024**	2025**	Comment
The percentage of the financial product's sovereign bonds economic exposure covered by the ESG analysis based on the third party ESG methodology used by the index provider	100%	100%	100%	In line with the financial product's commitment
The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe	57.4 vs 57.3	57.9 vs 57.8	57.3 vs 57.1	In line with the financial product's commitment

*Figures reported in 2023 are expressed as a quaterly weighted average.
** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The financial product does not intend to make any sustainable investment.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The financial product does not intend to make any sustainable investment.

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers some principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The overall policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process of the investment strategy in relation with social violations and human rights.
2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy.
3- Engagement and voting policy.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Sovereign mandatory indicators:

15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: From 31/12/2025

Largest investments**	Sector	% Assets*	Country**
FRANCE (REPUBLIC OF) 0.75 PCT 25-MAY-2028	Government	4.02%	France
FRANCE (REPUBLIC OF) 2.75 PCT 25-OCT-2027	Government	3.87%	France

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

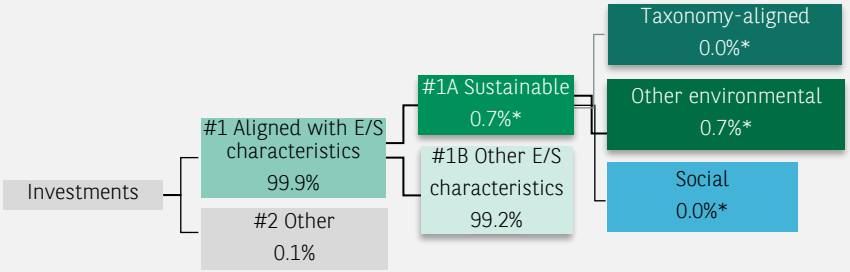

What was the asset allocation ?

Asset allocation describes the share of investments in specific assets.

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 99.9%.

The proportion of sustainable investments of the financial product is 0.7%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

Sectors (Level 2)	% Asset
National	99.9%
Cash	0.1%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, and it did not.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

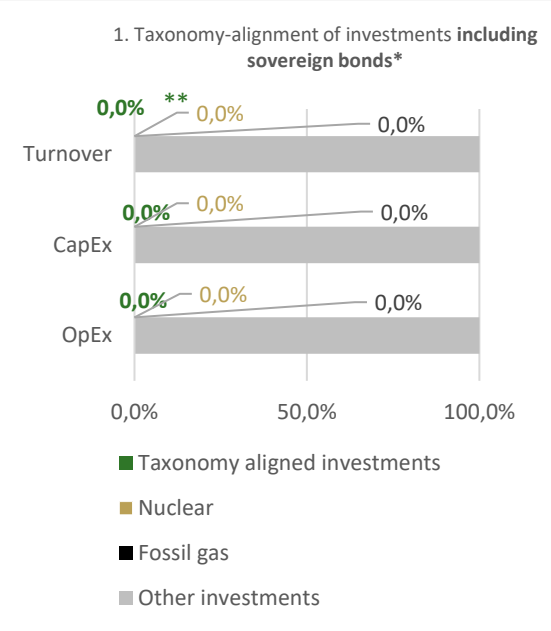

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?

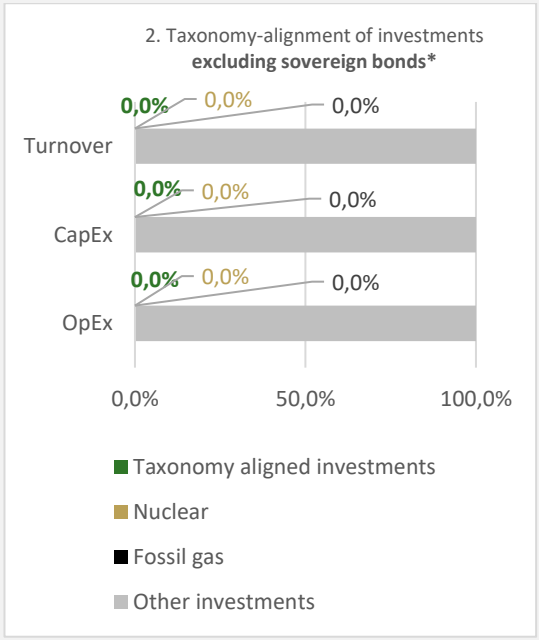

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No:

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2023*	0.0%	/	/
2024**	0.0%	0.0%	0.0%
2025**	0.0%	0.0%	0.0%

* Figures reported in 2023 are expressed as a quaterly weighted average.
** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2023 given the current level of data at the disposal of the management company at the time.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **0.7%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **0.0%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The third party methodology used by the index provider is applied to tilt issuers ranked higher on ESG criteria and to underweight or remove issuers that rank lower.

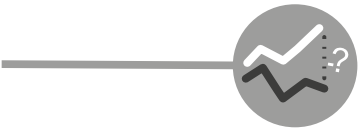

- The financial product investment strategy excludes issuers ranked in band 9 and 10 from the index. The index provider's ESG methodology scores are divided into 10 bands, where band 1 has the highest ESG score and band 10 has the lowest ESG score,

- The financial product investment strategy shall have at least 90% of its investment strategy underlying issuers covered by the ESG analysis based on the index provider ESG methodology

- The financial product invests in securities issued by eligible states following the conditions of the Central Labelling Agency (CLA) of the Towards Sustainability label dated as of October 6, 2023.

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two strategy reshuffles, if an issuer were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

The J.P. Morgan ESG EMU Government Bond IG 1-3 Year (TR) Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: www.jpmorgan.com.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How does the reference benchmark differ from a broad market index?*

  The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark

with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*"

- ***How did this financial product perform compared with the reference benchmark?***

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

- ***How did this financial product perform compared with the broad market index?***

	ESG score[1]
Financial product	57.3
Broad market index[2]	57.1

(1) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(2) J.P. Morgan EMU Government Bond IG 1-3 Year (EUR) RI

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY JPM ESG EMU GOVERNMENT BOND IG 1-10Y

Legal Entity Identifier: : 2138001F7LIJZ9QQ1I30

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective**: ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **2.2%** of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☐ with a social objective

☐ It made **sustainable investments with a social objective** : ___%

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The investment strategy selects and allocates exposure to sovereign and quasi-sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using third party sovereign methodology that involves evaluation of a country against a combination of environmental, social and governance factors, which include but are not limited to:

Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution;

Social: life conditions, economic inequality, education, employment, health infrastructure, human capital;

Governance: business regulations, corruption, democratic life, political stability, security

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

The J.P. Morgan ESG EMU Government Bond IG 1-10 (EUR) RI has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

- *How did the sustainability indicators perform?*

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The percentage of the financial product's sovereign bonds economic exposure covered by the ESG analysis based on the third party ESG methodology used by the index provider; **100%**

- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe: **57.2 VS 57.2 (J.P. Morgan Tilted EMU Government Bond IG 1-10 Year (EUR) RI)**

- *...and compared to previous periods ?*

Non applicable for the first periodic report.

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The financial product does not intend to make any sustainable investment

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

The financial product does not intend to make any sustainable investment

- *How were the indicators for adverse impacts on sustainability factors taken into account?*

Not applicable

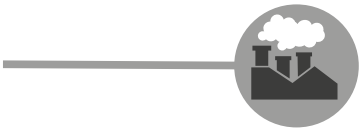

- *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Not applicable

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The overall policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy y in relation with social violations and human rights.

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy.

3- Engagement and voting policy.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Sovereign mandatory indicators:

15. GHG intensity

16. Investee countries subject to social violation

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations (Sustainability - BNPP AM Luxembourg private investor)

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31.12.2025

Source of data: BNP Paribas Asset Management,calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

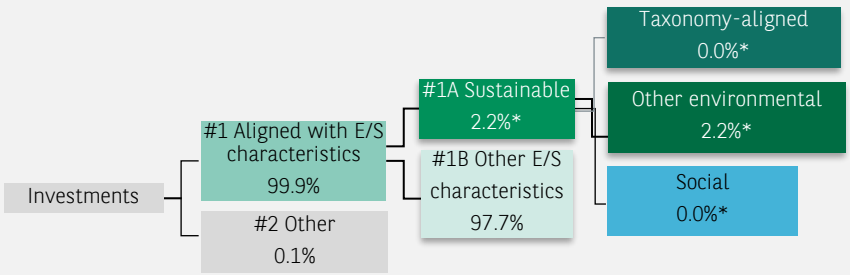

What was the asset allocation ?

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is **99.9%.**

The proportion of sustainable investments of the financial product is **2.2%.**

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

- *In which economic sectors were the investments made ?*

Sectors (Level 2)	% Asset
National	99.9%
Cash	0.1%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No:

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

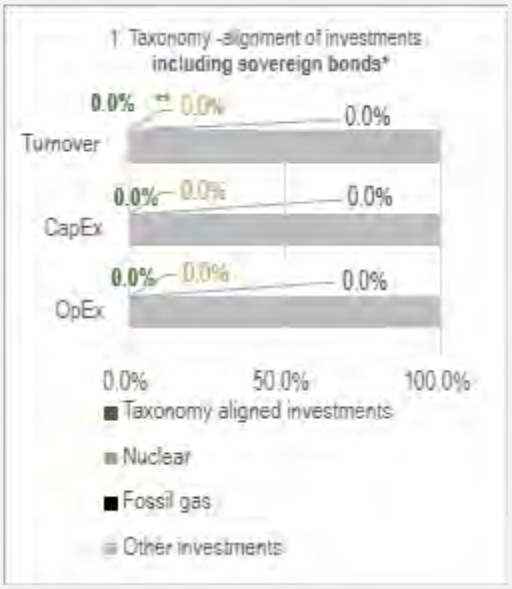

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

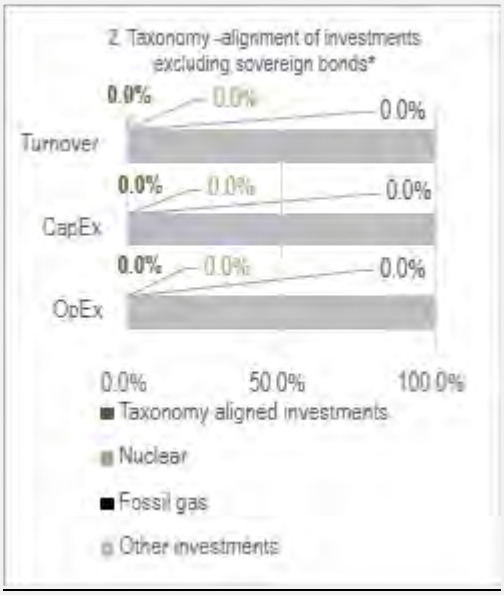

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

Non applicable for the first periodic report

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **2.2%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **0.0%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

In accordance with its investment strategy, the financial product does not invest in corporate issuers. As such, it cannot invest in companies in accordance with the article 12.1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission.

- The third party methodology used by the index provider is applied to tilt issuers ranked higher on ESG criteria and to underweight or remove issuers that rank lower.

- The financial product investment strategy excludes issuers ranked in band 9 and 10 from the index. The index provider's ESG methodology scores are divided into 10 bands, where band 1 has the highest ESG score and band 10 has the lowest ESG score,

- The financial product investment strategy shall have at least 90% of its investment strategy underlying issuers covered by the ESG analysis based on the index provider ESG methodology.

- The financial product invests in securities issued by eligible states following the conditions of the Central Labelling Agency (CLA) of the Towards Sustainability label as dated in the Prospectus.

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

The JP Morgan ESG EMU Government Bond IG 1-10 (EUR) RI has been designated as a reference benchmark for are the purpose of attaining the environmental or social characteristics promoted by the financial product

The methodology used for the calculation of the reference benchmark can be found at: https://www.jpmorgan.com/global .

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*"

How did this financial product perform compared with the reference benchmark?

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

How did this financial product perform compared with the broad market index?

	ESG score[2]
Financial product	57.2
Broad market index[3]	57.2

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **1.5%** of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☐ with a social objective

☐ It made **sustainable investments with a social objective** : ___%

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The investment strategy selects and allocates exposure to sovereign and quasi-sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using third party sovereign methodology that involves evaluation of a country against a combination of environmental, social and governance factors, which include but are not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution;

- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital;

- Governance: business regulations, corruption, democratic life, political stability, security.

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

The JPM ESG EMU Govt Bond IG 3-5Y (EUR) RI Indexhas been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's sovereign bonds economic exposure covered by the ESG analysis based on the third party ESG methodology used by the index provider; **100%**

- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe:**57.6 vs 57.6 (JPM EMU 3-5 Years (EUR) RI)**

...and compared to previous periods ?

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's sovereign bonds economic exposure covered by the ESG analysis based on the third party ESG methodology used by the index provider;	100%	100%	100%	100%	In line with the financial product's commitment
The weighted average ESG score of the portfolio compared to the weighted average ESG score of its investment universe	56.3 vs 56.3	57.4 vs 57.3	58.1 vs 57.9	57.6 vs 57.6	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not

meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account all the principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process : RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performanceindicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

<u>Corporate mandatory indicators:</u>

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity

14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team. If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers some principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The overall policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process of the investment strategy in relation with social violations and human rights.
2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy.
3- Engagement with policymakers.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Sovereign mandatory indicators:

15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31.12.2025

Largest investments**	Sector	% Assets*	Country**
FRANCE (REPUBLIC OF) 2.50 PCT 25-MAY-2030	Government	4.55%	France
FRANCE (REPUBLIC OF) 2.75 PCT 25-FEB-2029	Government	3.83%	France

SPAIN (KINGDOM OF) 3.50 PCT 31-MAY-2029	Government	1.85%	Spain

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

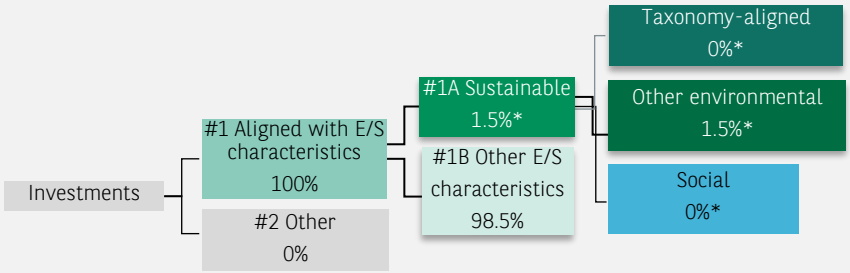

What was the asset allocation ?

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is **100%.**

Asset allocation describes the share of investments in specific assets.

The proportion of sustainable investments of the financial product is **1.5%.**

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

Sectors (Level 2)	% Asset
Government	99,9%
Cash	0,1%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, and it did not do so.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

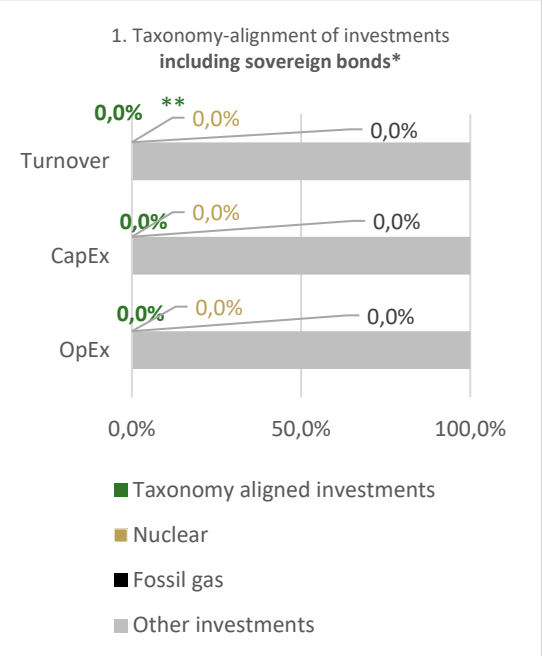

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

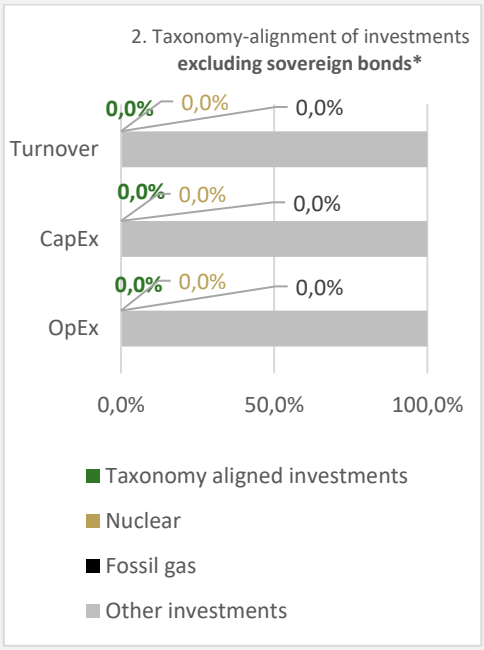

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No:

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- *What was the share of investments made in transitional and enabling activities?*

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

- *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?*

	Revenue	Capex	Opex
2022*	0.0%	/	/
2023**	0.0%	/	/
2024***	0.0%	0.0%	0.0%
2025***	0.0%	0.0%	0.0%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the current level of data at the disposal of the management company at the time.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **1.5%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **0%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

In accordance with its investment strategy, the financial product does not invest in corporate issuers. As such, it cannot invest in companies in accordance with the article 12.1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission.

-The third party methodology used by the index provider is applied to tilt issuers ranked higher on ESG criteria and to underweight or remove issuers that rank lower.

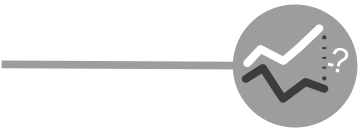

- The financial product investment strategy excludes issuers ranked in band 9 and 10 from the index. The index provider's ESG methodology scores are divided into 10 bands, where band 1 has the highest ESG score and band 10 has the lowest ESG score,

- The financial product investment strategy shall have at least 90% of its investment strategy underlying issuers covered by the ESG analysis based on the index provider ESG methodology.

The financial product invests in securities issued by eligible states following the conditions of the Central Labelling Agency (CLA) of the Towards Sustainability label dated as of October 6, 2023

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

The JPM ESG EMU Govt Bond IG 3-5Y (EUR) RI Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: www.jpmorgan.com.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*"

- *How did this financial product perform compared with the reference benchmark?*

  Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

- *How did this financial product perform compared with the broad market index?*

	ESG score[1]
Financial product	57.6
Broad market index[2]	57.6

(1) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(2) JPM EMU 3-5 Years (EUR) RI

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY JPM ESG EMU GOVERNMENT BOND IG 5-7Y **Legal Entity Identifier:** 213800MFOUX12AXH4F85

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

- ☐ Yes
- ☒ No

- ☐ It made **sustainable investment with an environmental objective:** ___%
  - ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **3.4%** of sustainable investments
  - ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
  - ☐ with a social objective
- ☐ It made **sustainable investments with a social objective** : ___%
- ☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The investment strategy selects and allocates exposure to sovereign and quasi-sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using third party sovereign methodology that involves evaluation of a country against a combination of environmental, social and governance factors, which include but are not limited to:

Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution;

Social: life conditions, economic inequality, education, employment, health infrastructure, human capital;

Governance: business regulations, corruption, democratic life, political stability, security

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

The JP Morgan ESG EMU Government Bond IG 5-7 (EUR) RI has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective of the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

- *How did the sustainability indicators perform?*

  The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

  - The percentage of the financial product's sovereign bonds economic exposure covered by the ESG analysis based on the third party ESG methodology used by the index provider; **100%**

  - The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe: **57.5 VS 57.5 (J.P. Morgan Tilted EMU Government Bond IG 5-7 Year (EUR) RI)**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- *...and compared to previous periods ?*

  Non applicable for the first periodic report.

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

  The financial product does not intend to make any sustainable investment

- *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

  The financial product does not intend to make any sustainable investment

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

  - *How were the indicators for adverse impacts on sustainability factors taken into account?*

    Not applicable

  - *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

    Not applicable

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used. The overall policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy y in relation with social violations and human rights.

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy.

3- Engagement and voting policy.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Sovereign mandatory indicators:

15. GHG intensity

16. Investee countries subject to social violation

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations (Sustainability - BNPP AM Luxembourg private investor)

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31.12.2025

Largest investments**	Sector	% Assets*	Country**
FRANCE (REPUBLIC OF) 1.50 PCT 25-MAY-2031	Government	6.29%	France
FRANCE (REPUBLIC OF) 2.00 PCT 25-NOV-2032	Government	5.16%	France

Source of data: BNP Paribas Asset Management,calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

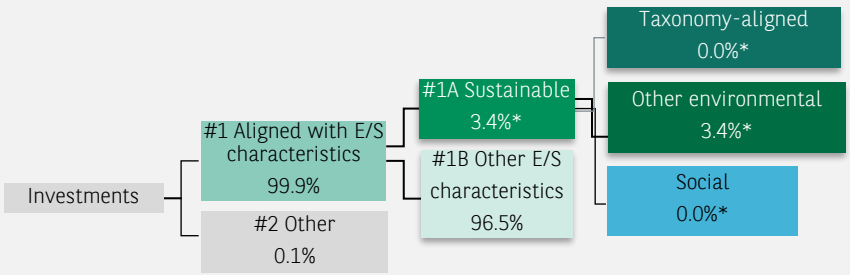

What was the asset allocation ?

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is **99.9%.**

The proportion of sustainable investments of the financial product is **3.4%.**

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

- *In which economic sectors were the investments made ?*

Sectors (Level 2)	% Asset
National	99.9%
Cash	0.1%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No:

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

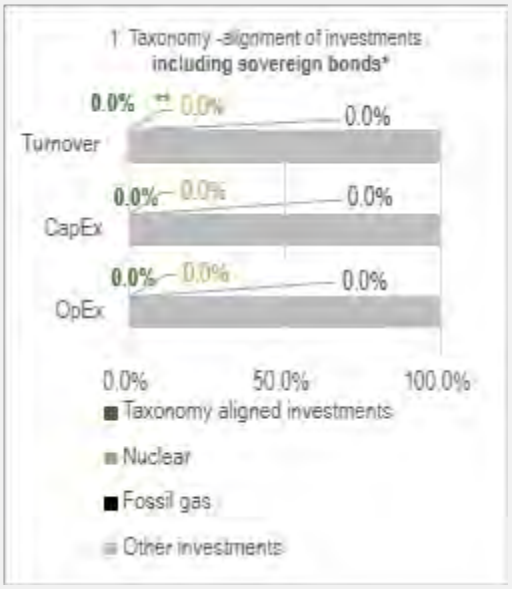

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

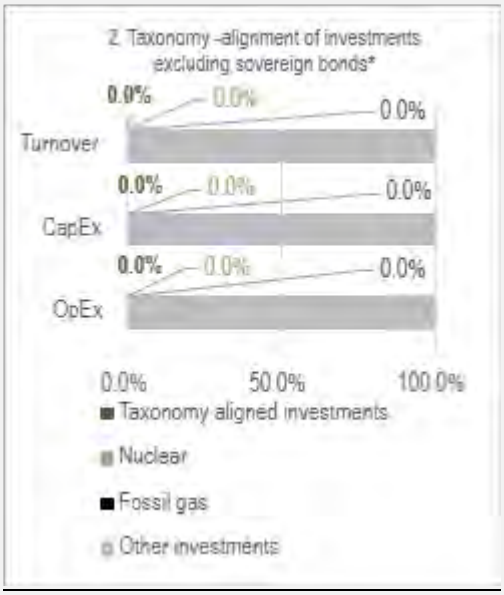

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

Non applicable for the first periodic report

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **3.4%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **0.0%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

In accordance with its investment strategy, the financial product does not invest in corporate issuers. As such, it cannot invest in companies in accordance with the article 12.1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission.

- The third party methodology used by the index provider is applied to tilt issuers ranked higher on ESG criteria and to underweight or remove issuers that rank lower.

- The financial product investment strategy excludes issuers ranked in band 9 and 10 from the index. The index provider's ESG methodology scores are divided into 10 bands, where band 1 has the highest ESG score and band 10 has the lowest ESG score,

- The financial product investment strategy shall have at least 90% of its investment strategy underlying issuers covered by the ESG analysis based on the index provider ESG methodology.

- The financial product invests in securities issued by eligible states following the conditions of the Central Labelling Agency (CLA) of the Towards Sustainability label as dated in the Prospectus.

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

The JP Morgan ESG EMU Government Bond IG 5-7 (EUR) RI has been designated as a reference benchmark for are the purpose of attaining the environmental or social characteristics promoted by the financial product

The methodology used for the calculation of the reference benchmark can be found at: https://www.jpmorgan.com/global .

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*"

How did this financial product perform compared with the reference benchmark?

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

How did this financial product perform compared with the broad market index?

	ESG score[1]
Financial product	57.5
Broad market index[3]	57.5

(1) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(2) JP Morgan ESG EMU Government Bond IG 5-7 (EUR) RI

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY JPM ESG EMU GOVERNMENT BOND IG 7-10Y **Legal Entity Identifier:** : 213800PJOMABQBQHPT66

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **3.6%** of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☐ with a social objective

☐ It made **sustainable investments with a social objective** : ___%

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The investment strategy selects and allocates exposure to sovereign and quasi-sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using third party sovereign methodology that involves evaluation of a country against a combination of environmental, social and governance factors, which include but are not limited to:

Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution;

Social: life conditions, economic inequality, education, employment, health infrastructure, human capital;

Governance: business regulations, corruption, democratic life, political stability, security

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

The JP Morgan ESG EMU Government Bond IG 7-10 Yr (EUR) RI has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

- *How did the sustainability indicators perform?*

  The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

  - The percentage of the financial product's sovereign bonds economic exposure covered by the ESG analysis based on the third party ESG methodology used by the index provider: **100%**

  -The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus: **57.4 vs 57.4 (JP Morgan ESG EMU Government Bond IG 7-10 Yr (EUR) RI)**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- *...and compared to previous periods ?*

  Non applicabe for the first periodic report

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

  The financial product does not intend to make any sustainable investment.

- *How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?*

  The financial product does not intend to make any sustainable investment.

  How were the indicators for adverse impacts on sustainability factors taken into account?

  Non applicable

  Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

  Non applicable

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The overall policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Sovereign mandatory indicators:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations (SFDR: Sustainability-related disclosures - BNP Paribas)

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31.12.2025

Largest investments**	Sector	% Assets*	Country**
FRANCE (REPUBLIC OF) 3.50 PCT 25-NOV-2033	Government	4.07%	France

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

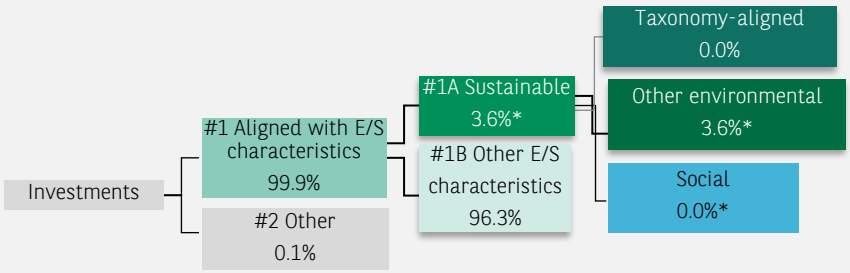

Asset allocation describes the share of investments in specific assets.

What was the asset allocation ?

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 99.9%.

The proportion of sustainable investments of the financial product is 3.6%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

- *In which economic sectors were the investments made ?*

Sectors (Level 2)	% Asset
National	99.9%
Cash	0.1%

Source of data: BNP Paribas Asset Management,calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

To comply with the EU

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

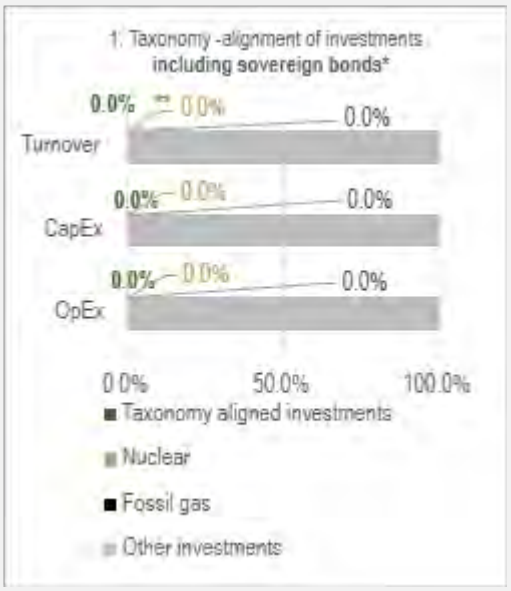

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?

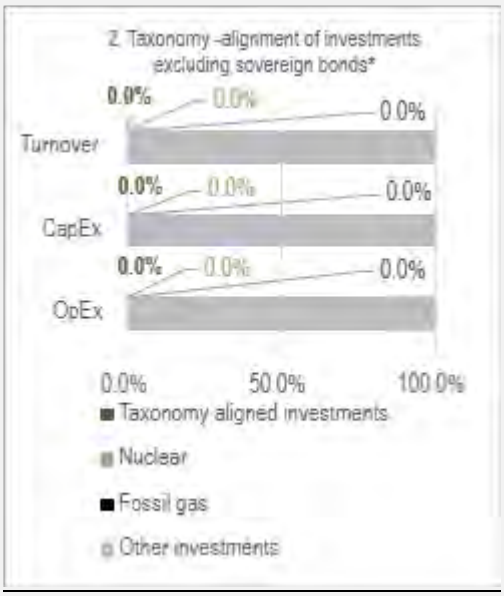

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

✖ No:

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

Non applicable for the first periodic report

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **3.6%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **0%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product invests in securities issued by eligible states following the conditions of the Central Labelling Agency (CLA) of the Towards Sustainability label as dated in the Prospectus.

- The third party methodology used by the index provider is applied to tilt issuers ranked higher on ESG criteria and to underweight or remove issuers that rank lower.

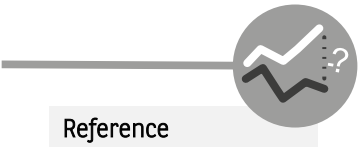

- The financial product investment strategy excludes issuers ranked in band 9 and 10 from the index. The index provider's ESG methodology scores are divided into 10 bands, where band 1 has the highest ESG score and band 10 has the lowest ESG score,

- The financial product investment strategy shall have at least 90% of its investment strategy underlying issuers covered by the ESG analysis based on the index provider ESG methodology.

  There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

  In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

The JP Morgan ESG EMU Government Bond IG 7-10 Yr (EUR) RI has been designated as a reference benchmark are for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: https://www.jpmorgan.com/global .

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*".

How did this financial product perform compared with the reference benchmark?

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

How did this financial product perform compared with the broad market index?

	ESG score[2]
Financial product	57.4
Broad market index[3]	57.4

(1) The carbon footprint is the sum of each carbon emission divided by its simplified enterprise value, multiplied by the weight in the portfolio. Carbon emissions represent the sum of a company's scope 1 (direct emissions from installations) and scope 2 (indirect emissions linked to the company's energy consumption) emissions. Simplified

enterprise value measures a total value and is calculated as the sum of market capitalization and total debt. The footprint is expressed in tons of CO_2 equivalent per million euros of entreprise value.

(2) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) JP Morgan ESG EMU Government Bond

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY JPM ESG EMU Government Bond IG 10Y+

Legal Entity Identifier: .21380089SISVY93QV423

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **8.2%** of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☐ with a social objective

☐ It made **sustainable investments with a social objective** : ___%

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The investment strategy selects and allocates exposure to sovereign and quasi-sovereign issuers based on their performance across the environmental, social and governance pillars. The ESG performance of each country is assessed using third party sovereign methodology that involves evaluation of a country against a combination of environmental, social and governance factors, which include but are not limited to:

- Environmental: climate mitigation, biodiversity, energy efficiency, land resources, pollution;

- Social: life conditions, economic inequality, education, employment, health infrastructure, human capital;

- Governance: business regulations, corruption, democratic life, political stability, security.

The sustainable investor for a changing world

The investment manager also applies the BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks.

The JPM ESG EMU Government Bonds IG 10Y+ Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's sovereign bonds economic exposure covered by the ESG analysis based on the third party ESG methodology used by the index provider : **100%**
- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the prospectus : **59.4 vs 59.4 (J.P. Morgan EMU Investment Grade - 10+ LOC (EUR) RI)**

Source: BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

...and compared to previous periods ?

Indicator	2024*	2025*	Comment
The percentage of the financial product's sovereign bonds economic exposure covered by the ESG analysis based on the third party ESG methodology used by the index provider	100%	100%	In line with the financial product's commitment
The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe	59.7 vs 59.2	59.4 VS 59.4	In line with the financial product's commitment

* Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The financial product does not intend to make any sustainable investment

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investor for a changing world

The financial product does not intend to make any sustainable investment

How were the indicators for adverse impacts on sustainability factors taken into account?

Not applicable.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Not applicable.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers some principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The overall policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process of the investment strategy in relation with social violations and human rights.
2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy.
3- Engagement with policymakers.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>*Sovereign mandatory indicators:*</u>

15. GHG intensity
16. Investee countries subject to social violations

The sustainable investor for a changing world

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: From 31/12/2025

Largest investments**	Sector	% Assets*	Country**
FRANCE (REPUBLIC OF) 1.25 PCT 25-MAY-2036	Government	2.33%	France
FRANCE (REPUBLIC OF) 4.50 PCT 25-APR-2041	Government	2.17%	France

SPAIN (KINGDOM OF) 4.70 PCT 30-JUL-2041	Government	1.27%	Spain

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

What was the asset allocation ?

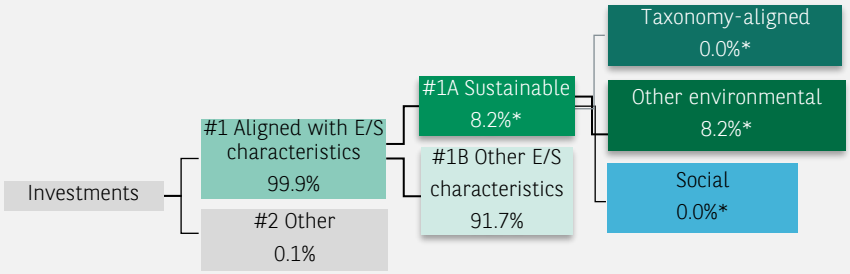

Asset allocation describes the share of investments in specific assets.

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 99.9%.

The proportion of sustainable investments of the financial product is 8.2%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

The sustainable investor for a changing world

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

- *In which economic sectors were the investments made ?*

Sectors	% Asset
National	99.9%
Cash	0.1%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, and it did not do so.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No:

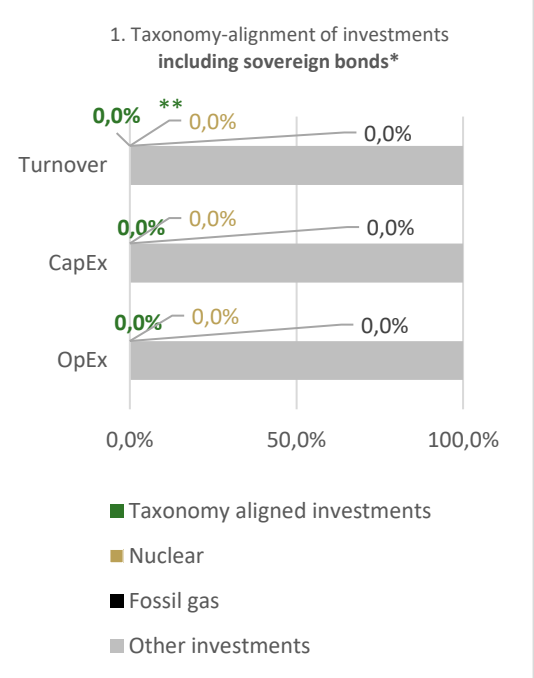

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

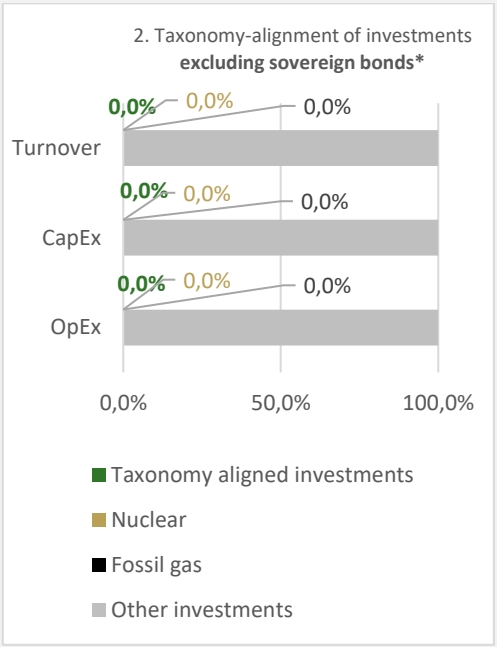

The sustainable investor for a changing world

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- *What was the share of investments made in transitional and enabling activities?*

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

- *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?*

	Revenue	Capex	Opex
2024**	0.0%	0.0%	0.0%
2025**	0.0%	0.0%	0.0%

* Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

The sustainable investor for a changing world

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **8.2%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **0.0%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- BNP Paribas Group's sensitive countries framework, which includes restrictive measures on certain countries and/or activities that are considered as being particularly exposed to money laundering and terrorism financing related risks

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The The third party methodology used by the index provider is applied to tilt issuers ranked higher on ESG criteria and to underweight or remove issuers that rank lower;

- The financial product investment strategy excludes issuers ranked in band 9 and 10 from the index. The index provider's ESG methodology scores are divided into 10 bands, where band 1 has the highest ESG score and band 10 has the lowest ESG score.

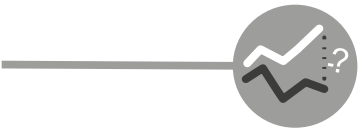

- The financial product investment strategy shall have at least 90% of its investment strategy underlying issuers covered by the ESG analysis based on the index provider ESG methodology.

- The financial product invests in securities issued by eligible states following the conditions of the Central Labelling Agency (CLA) of the Towards Sustainability label dated as of October 6, 2023

The sustainable investor for a changing world

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance, between two strategy reshuffles, if an issuer were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference

The JPM ESG EMU Government Bonds IG 10Y+ Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: J.P. Morgan ESG EMU Government Bond IG 10+ Year Index.

- *How does the reference benchmark differ from a broad market index?*

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*".

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- *How did this financial product perform compared with the reference benchmark?*

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

- *How did this financial product perform compared with the broad market index?*

	ESG score[1]
Financial product	59.4
Broad market index[2]	59.4

(1) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

The sustainable investor for a changing world

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY JPM ESG Green Social & Sustainability IG EUR Bond **Legal Entity Identifier:** 213800QTVKCKUPE6F192

SUSTAINABLE INVESTMENT OBJECTIVE

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

● ● ✖ Yes ● ○ ☐ No

✖ It made a **sustainable investment with an environmental objective: 81.4%***

- ✖ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ✖ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It promoted **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it had a proportion of __ % of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☐ with a social objective

✖ It made **sustainable investments with a social objective: 34.4%***

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

To what extent was the sustainable investment objective of this financial product met?

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The investment manager is using as of the date of the prospectus, the BNP Paribas Asset Management (BNPP AM) internal methodology to determine sustainable investments, Such methodology integrates integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)

The financial product emphasises especially on green bonds that aims to be aligned in achieving the goals within the paris agreement.

The JPM ESG Green Social & Sustainability IG EUR Bond (NTR) Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

How did the sustainability indicators perform?

Sustainability indicators measure how the sustainable objetives of this financial product are attained.

The following sustainability indicators are used to measure the attainment of the sustainable investment objective of the financial product and are based on the reference benchmark ESG methodology::

- The percentage of the financial product's assets covered by the ESG analysis based on the third party ESG methodology : **100%**
- The weighted average ESG score of the financial product's assets compared to the weighted average ESG score of its investment universe : **82.7 vs 59.9 (Bloomberg Euro Aggregate (EUR) RI)**
- The percentage of the financial product's portfolio invested in "sustainable investments" as defined in Article 2 (17) of the SFDR regulation: **99.6%**

...and compared to previous periods ?

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's assets covered by the ESG analysis based on the third party ESG methodology	100%	100%	100%	100%	In line with the financial product's commitment
The weighted average ESG score of the financial product's assets compared to the weighted average ESG score of its investment universe	81.3 vs 58.8	81.6 vs 59.6	83.0 vs 65.6	82.7 vs 59.9	In line with the financial product's commitment
The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of SFDR.	98.2%	99.4%	98.0%	99.6%	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quarterly weighted average.
***Figures reported in 2024 and 2025 are expressed as a quarterly weighted based on the AUM.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR where these are relevant and material to the investment strategy, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations (SFDR: Sustainability-related disclosures - BNP Paribas)

What were the top investments of this financial product?

The list includes investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31.12.25

Largest investments	Sector	% Assets*	Country
FRANCE (REPUBLIC OF) 1.75 PCT 25-JUN-2039	Government	2.87%	France
GERMANY (FEDERAL REPUBLIC OF) 2.30 PCT 15-FEB-2033	Government	1.48%	Germany

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

What was the asset allocation ?

The proportion of the investments used to meet the sustainable investment objective in accordance with the binding elements of its investment strategy is 99.6%.

Asset allocation describes the share of investments in specific assets

The category **#1 Sustainable** covers sustainable investments with environmental or social objectives.

The sub-category **#2 Not sustainable** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

Sectors	% Asset
National	48.9%
Supranationals	21.5%
Banking	8.2%
Real Estate	5.6%
Utilities	5.3%
Insurance	3.4%
Industrial Services	2.1%
Consumer Discretionary Products	1.4%
Telecommunications	1.1%
Materials	0.8%
Financial Services	0.5%
Renewable Energy	0.3%
Consumer Staple Products	0.2%
Cash	0.2%
Retail & Whsle - Discretionary	0.2%
Retail & Wholesale - Staples	0.1%
Tech Hardware & Semiconductors	0.1%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

- *Did the financial product invest in fossil gas and/or nuclear energy activities that comply with the EU Taxonomy [1]?*

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

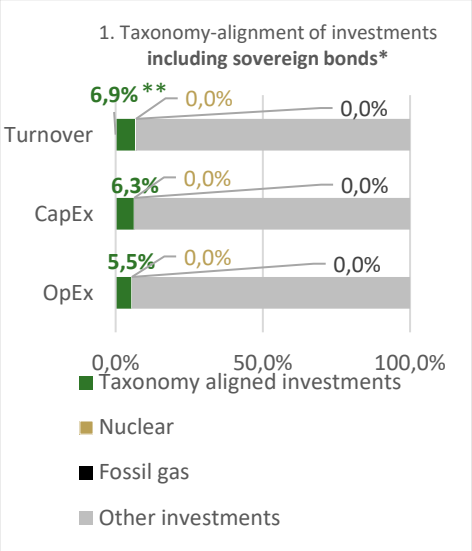

☒ No:

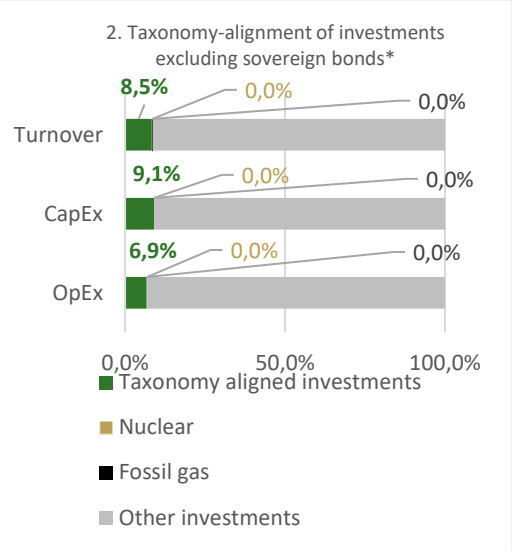

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of: :

- **turnover** reflecting the share of revenue from green activities of investee compagnies
- **capital expenditure** (CapEx) showing the green investments made by investee companies e.g. for a transition to a green economy
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

* *For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

** *Real taxonomy aligned*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the share of investments in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2022*	1.2%	/	/
2023**	2.4%	/	/
2024***	4.7%	5.0%	5.1%
2025***	6.9%	6.3%	5.5%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quarterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM.

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the level of data at the disposal of the management company at the time.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **74.6%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **34.4%** of the financial product..

What investments were included under 'not sustainable', what was their purpose and were there any minimum environmental or social safeguards?

The "Not sustainable" investments are instruments which are used for liquidity and/or hedging purposes, such as cash, deposits and derivatives.

The investment manager will ensure that those investments are made while maintaining the sustainable investment objective of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- the risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- the RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to attain the sustainable investment objective during the reference period ?

- The financial product excludes companies violating international norms, exposed to tobacco or controversial weapons, as well as companies active in sectors with possible negative impacts on the climate in accordance with the exclusion criteria defined in the Article 12. 1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission. The details on how the exclusions are applied, depending on the asset classes, are available on our website (docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ – section « PAB exclusions for ESMA Guidelines »).

- The financial product shall systematically integrate relevant ESG factors in line with its investment strategy into its investment analysis and decision-making processes.

- Bonds issued by non sovereign issuers that derive revenues from nuclear energy, oil and gas, oil sands, thermal coal, tobacco or weapons, or that do not comply with the UNGC Principles, will not be eligible

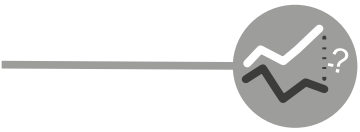

- The investment strategy of the financial product excludes issuers classified in band 5 as defined by the index provider. The index ESG scores are split into five bands, where band 1 has the highest ESG score and band 5 has the lowest ESG score

- A third party ESG methodology used by the index provider is applied to tilt issuers ranked higher on ESG criteria and to underweight or remove issuers that rank lower.

- The financial product shall invest at least 95% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "*What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives*" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

  There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

  In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: https://www.bnpparibas-am.com/en/sustainability-documents/

How did this financial product perform compared to the reference sustainable benchmark?

The J.P. Morgan ESG Green Social & Sustainability IG (EUR) RI Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: www.jpmorgan.com.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable objective?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*".

How did this financial product perform compared with the reference benchmark?

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

- *How did this financial product perform compared with the broad market index?*

	GHG Emissions[1]	ESG score[2]
Financial product	5.2	83.1
Broad market index[2]	28.4	81.6

(1) GHG emissions is calculated as the sum, for each GHG emissions of the investee company's (for the relevant scope), weighted by the ratio of the current value of the investment to the investee company's entreprise value. The ghg is expressed in tons of CO2 equivalent per million euros of entreprise value.

(2) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) J.P. Morgan ESG Green Social & Sustainability IG (EUR) RI Index

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY LOW CARBON 100 EUROPE PAB **Legal Entity Identifier:** 213800M1ABPQNKHTHJ07

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective**: ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective** : ___%

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **71.1%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The investment strategy selects issuers through:

- A negative screening applying exclusion criteria. This is applied with regard to issuers with a poor ESG profile and issuers that are in systematic violation of the UN Global Compact.:

- A positive screening using a selectivity approach. This involves evaluation of Environmental, Social, and Governance (ESG) performance of an issuer against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;

- Social: respect of human rights and workers' rights, human resources management (workers'health and safety, diversity);

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable, in collaboration with BNP Paribas Asset Management's Sustainability Centre.

The Low Carbon 100 Europe PAB® (NTR) Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The weightings of the Environmental (E), Social (S) and Governance (G) criteria in the ESG rating methodology of ISS ESG, which is Euronext's ESG score provider, have thresholds below 20% only on the Governance criterion. For more details on ISS ESG's methodology, please refer to the following document: https://www.issgovernance.com/file/products/iss-esg-corporate-rating-methodology.pdf

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The following sustainability indicators are used to measure the attainment of the sustainable investment objective of the financial product, and are based on the reference benchmark ESG methodology:

- The percentage of the financial product's portfolio compliant with the reference benchmark eligible stock criteria taking into account sectorial and controversial policies: **100%**

- The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology: **100%**

- The minimum percentage of the financial product's investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per extra financial criteria: **20%**

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **72.1%**

...and compared to previous periods ?

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's portfolio compliant with the reference benchmark eligible stock criteria taking into account sectorial and controversial policies	100%	100%	100%	100%	In line with the financial product's commitment
The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology	100%	100%	100%	100%	In line with the financial product's commitment
The minimum percentage of the financial product's investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per extra financial criteria	20%	20%	20%	30%	In line with the financial product's commitment
The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation	68.7%	65.5%	66.7%	72.1%	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The investment manager is using, as of the date of the prospectus, the BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus,to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as

best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap

13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
13. Board gender diversity

14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations SFDR: Sustainability-related disclosures - BNP Paribas

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31.12.2025

Largest investments**	Sector	% Assets*	Country**
NOVARTIS AG N	Health Care	5.89%	Switzerland
BANCO SANTANDER SA	Financials	5.76%	Spain
LOREAL SA	Consumer Staples	5.74%	France
ASTRAZENECA PLC	Health Care	5.46%	United Kingdom
NESTLE SA N	Consumer Staples	3.61%	Switzerland
RELX PLC	Industrials	2.98%	United Kingdom

The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

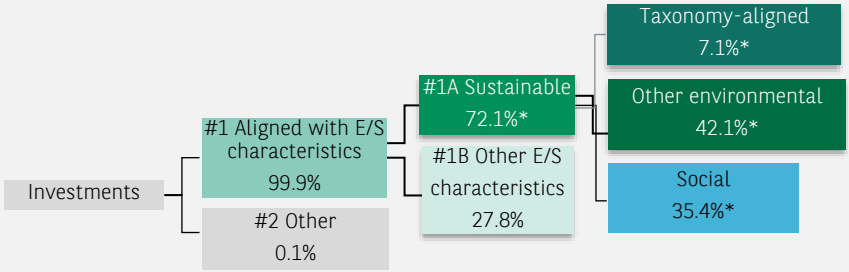

Asset allocation describes the share of investments in specific assets.

What was the asset allocation ?

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 99.9%.

The proportion of sustainable investments of the financial product is 72.1%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

- *In which economic sectors were the investments made ?*

Sectors (level 2)	% Asset
Pharmaceuticals Biotechnology & Life Sciences	15,61%
Banks	15,07%
Capital Goods	12,05%
Household & Personal Products	7,26%
Materials	6,63%
Food Beverage & Tobacco	6,55%
Insurance	6,46%
Commercial & Professional Services	6,08%
Financial Services	3,39%
Telecommunication Services	3,05%
Transportation	3,00%
Utilities	2,97%
Automobiles & Components	1,92%
Equity Real Estate Investment Trusts (REITs)	1,62%
Semiconductors & Semiconductor Equipment	1,58%
Consumer Discretionary Distribution & Retail	1,49%
Health Care Equipment & Services	1,15%
Software & Services	1,03%
Consumer Durables & Apparel	0,94%
Technology Hardware & Equipment	0,87%
Cash	0,45%
Consumer Staples Distribution & Retail	0,38%
Real Estate Management & Development	0,31%
Consumer Services	0,07%
Media & Entertainment	0,07%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No:

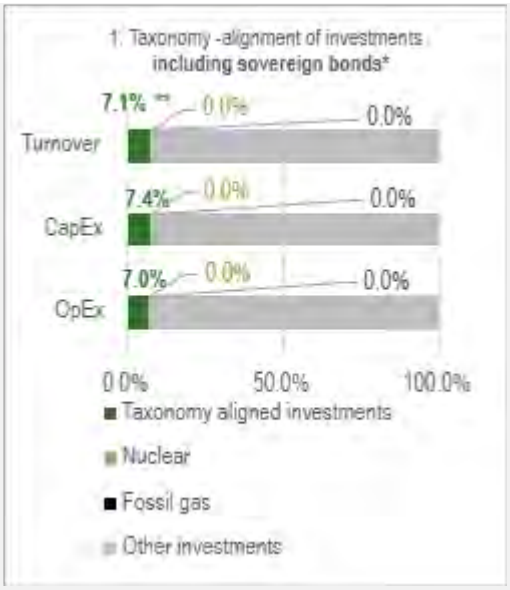

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

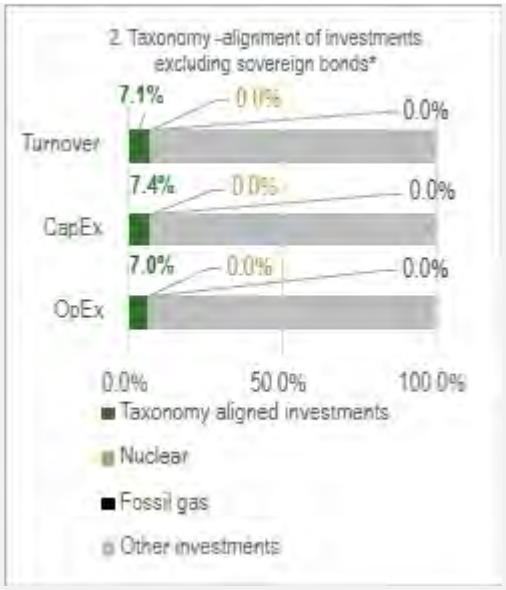

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2022*	5.0%	/	/
2023**	5.3%	/	/
2024***	6.2%	6.9%	5.9%
2025***	7.1%	7.4%	7.0%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 are expressed as a quarterly weighted average based on the AUM

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the current level of data at the disposal of the management company at the time.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **42.1%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **35.4%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product excludes companies violating international norms, exposed to tobacco or controversial weapons, as well as companies active in sectors with possible negative impacts on the climate in accordance with the exclusion criteria defined in the Article 12. 1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission. The details on how the exclusions are applied, depending on the asset classes, are available on our website (https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ section « PAB exclusions for ESMA Guidelines »)

- -The financial product complies, as part of its investment policy, with the list of exclusion criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https//docfinder.bnpparibas-am com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ . As the financial product is a passively-managed ETF, the implementation of exclusions depends on the index provider's own ESG data and methodology.

- The GHG intensity of the investee companies in portfolio is lower than that of the extra-financial investment universe (PAI 3)

- The percentage of companies of the financial product's portfolio without carbon emission reduction initiative is lower than that of its investment universe (Volontary Environmental PAI 4)

- The financial product shall comply with the eligible stock criteria by excluding companies involved in controversies due to poor practices related to human and labour rights,

environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

- The financial product shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.

- The financial product's investment universe of the investment strategy, as defined in the Prospectus, shall be reduced by a minimum of 30% due to exclusion of securities with low ESG score and/or sector exclusions and/or other extra-financial criteria.

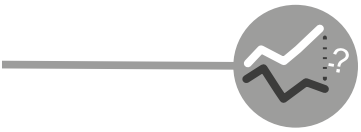

- The financial product shall have the weighted average GHG intensity of its portfolio at least 50% lower than the weighted average GHG intensity of its investment universee.

- The financial product shall achieve an annual decarbonisation target of at least 7%.

- The financial product shall invest at least 50% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

  There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

  In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

The Euronext Low Carbon 100 Europe PAB® (EUR) NR Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: www.euronext.com/.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*".

- *How did this financial product perform compared with the reference benchmark?*

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

- *How did this financial product perform compared with the broad market index?*

	GHG	ESG score[2]
Financial product	59.1	67.5
Broad market index[3]	95.5	61.2

(1) GHG emissions is calculated as the sum, for each GHG emissions of the investee company's (for the relevant scope), weighted by the ratio of the current value of the investment to the investee company's entreprise value..

(2) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) Euronext Europe 500 (EUR) NR

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS EASY LOW CARBON 100 EUROZONE PAB

Legal Entity Identifier: 2138000TZIO361KCCP31

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective** : ___%

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **72.3%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using the methodology of the index provider. As such, the product is exposed to issuers that demonstrate superior or improve environmental and social practices, while implementing robust corporate governance practices withintheir sector of activity.

The investment strategy selects issuers through:

- A negative screening applying exclusion criteria. This is applied with regard to issuers with a poor ESG profile and issuers that are in systematic violation of the UN Global Compact.

- A positive screening using a selectivity approach. This involves evaluation of Environmental, Social, and Governance (ESG) performance of an issuer against a combination of environmental, social and governance factors which include but not limited to :

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;

- Social: respect of human rights and workers' rights, human resources management (workers'health and safety, diversity);

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable, in collaboration with BNP Paribas Asset Management's Sustainability Centre.

The Euronext Low Carbon 100 Eurozone (EUR) NR Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The weightings of the Environmental (E), Social (S) and Governance (G) criteria in the ESG rating methodology of ISS ESG, which is Euronext's ESG score provider, have thresholds below 20% only on the Governance criterion. For more details on ISS ESG's methodology, please refer to the following document: https://www.issgovernance.com/file/products/iss-esg-corporate-rating-methodology.pdf

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the reference benchmark eligible stock criteria taking into account sectorial and controversial policies: **100%**

- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology: **100%**

- The minimum percentage of the financial product's investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per extra financial criteria: **30%**

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **72.3%**

* Source: BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

...and compared to previous periods ?

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's portfolio compliant with the reference benchmark eligible stock criteria taking into account sectorial and controversial policies	100%	100%	100%	100%	In line with the financial product's commitment
The percentage of the portfolio covered by the ESG analysis based on the ESG internal proprietary methodology	100%	100%	100%	100%	In line with the financial product's commitment
The minimum percentage of the financial product's investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per extra financial criteria	20%	20%	20%	30%	In line with the financial product's commitment
The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation	62.3%	61.6%	64.6%	72.3%	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The investment manager is using, as of the date of the prospectus, the BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus,to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/). As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio

10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://group.bnpparibas/en/sfdr-sustainability-related-disclosures

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinationa Enterprises and UN Guiding Principles on Business & Human Rights, including the principle and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate
potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31.12.2025

Largest investments**	Sector	% Assets*	Country**
ASML HOLDING NV	Information Technology	8.44%	Netherlands
LOREAL SA	Consumer Staples	4.78%	France
SAP	Information Technology	4.43%	Germany
UNILEVER PLC	Consumer Staples	4.22%	United Kingdom

BNP PARIBAS SA	Financials	1.88%	France

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

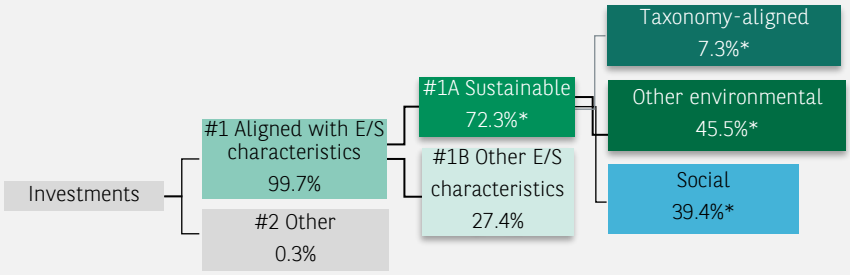

What was the asset allocation ?

Asset allocation describes the share of investments in specific assets.

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 99.7%.

The proportion of sustainable investments of the financial product is 72.3%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

Sectors (Level 2)	% Asset
Banks	15.10%
Household & Personal Products	10.00%
Semiconductors & Semiconductor	9.44%
Capital Goods	9.42%
Insurance	7.12%
Pharmaceuticals Biotechnology & Life	4.82%
Food Beverage & Tobacco	4.77%
Software & Services	4.76%
Telecommunication Services	4.30%
Utilities	4.03%
Health Care Equipment & Services	3.53%
Commercial & Professional Services	3.25%
Consumer Discretionary Distribution &	3.21%
Consumer Durables & Apparel	2.86%
Transportation	2.75%
Automobiles & Components	2.34%
Financial Services	2.17%
Equity Real Estate Investment Trusts	2.02%
Materials	1.73%
Cash	0.95%
Media & Entertainment	0.62%
Consumer Services	0.57%
Consumer Staples Distribution & Retail	0.23%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly .

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

- ○ *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

  ☐ Yes:

  ☐ In fossil gas ☐ In nuclear energy

  ☒ No:

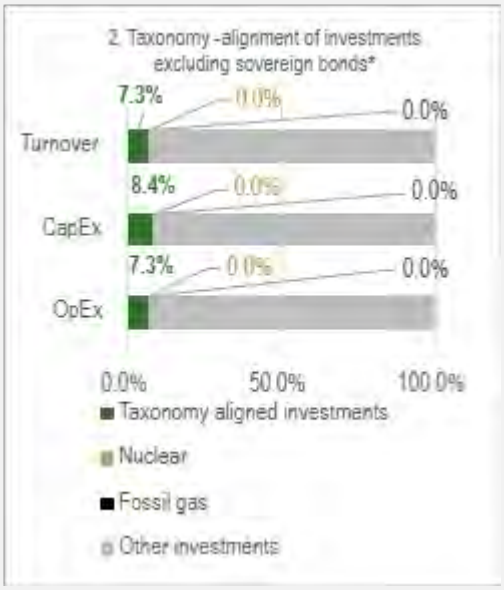

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2022*	6.9%	/	/
2023**	7.1%	/	/
2024***	7.3%	8.8%	7.1%
2025***	7.3%	8.4%	7.3%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the current level of data at the disposal of the management company at the time.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **45.5%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **39.4%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product shall comply with the eligible universe criteria of the index by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons,), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

The financial product excludes companies violating international norms, exposed to tobacco or controversial weapons, as well as companies active in sectors with possible negative impacts on the climate in accordance with the exclusion criteria defined in the Article 12. 1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission. The details on how the exclusions are applied, depending on the asset classes, are available on our website (https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ – section « PAB exclusions for ESMA Guidelines »).

The financial product complies, as part of its investment policy, with the list of exclusion criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-

990be2616498/. As the financial product is a passively-managed ETF, the implementation of exclusions depends on the index provider's own ESG data and methodology.

- The financial product shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.

- The financial product's investment universe of the investment strategy, as defined in the Prospectus, shall be reduced by a minimum of 30% due to exclusion of securities with low ESG score and/or sector exclusions and/or other extra-financial criteria.

- The financial product shall have the weighted average greenhouse gas ("GHG") intensity of its portfolio at least 50% lower than the weighted average GHG intensity of its investment universe.

- The financial product shall achieve an annual decarbonisation target of at least 7%.

-The GHG intensity of the investee companies in portfolio is lower than that of the extra-financial investment universe (PAI 3).

-The percentage of companies of the financial product's portfolio without carbon emission reduction initiative is lower than the one of its investment universe (Voluntary Environmental PAI 4)

The financial product shall invest at least 45% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

The Euronext Low Carbon 100 Eurozone (EUR) NR Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: www.euronext.com/

- *How does the reference benchmark differ from a broad market index?*

  The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with

regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*"

- ***How did this financial product perform compared with the reference benchmark?***

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

- ***How did this financial product perform compared with the broad market index?***

	GHG emissions [1,2]	ESG score[2]
Financial product	28.4	66.3
Broad market index[3]	111.9	62.5

(1) GHG emissions is calculated as the sum, for each GHG emissions of the investee company's (for the relevant scope), weighted by the ratio of the current value of the investment to the investee company's entreprise value. The ghg is expressed in tons of CO2 equivalent per million euros of entreprise value..

(2) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) Euronext Eurozone 300 (EUR) NR

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY LOW CARBON 300 WORLD PAB **Legal Entity Identifier:** 213800HM939AKXDN8R07

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective** : ___%

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **63.1%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The investment strategy selects issuers through:

- A negative screening applying exclusion criteria. This is applied with regard to issuers with a poor ESG profile and issuers that are in systematic violation of the UN Global Compact.:

- A positive screening using a selectivity approach. This involves evaluation of Environmental, Social, and Governance (ESG) performance of an issuer against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;

- Social: respect of human rights and workers' rights, human resources management (workers'health and safety, diversity);

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable, in collaboration with BNP Paribas Asset Management's Sustainability Centre.

The Euronext Low Carbon 300 World (EUR) NR Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The weightings of the Environmental (E), Social (S) and Governance (G) criteria in the ESG rating methodology of ISS ESG, which is Euronext's ESG score provider, have thresholds below 20% only on the Governance criterion. For more details on ISS ESG's methodology, please refer to the following document: https://www.issgovernance.com/file/products/iss-esg-corporate-rating-methodology.pdf

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The following sustainability indicators are used to measure the attainment of the sustainable investment objective of the financial product, and are based on the reference benchmark ESG methodology:

- The percentage of the financial product's portfolio compliant with the reference benchmark eligible stock criteria taking into account sectorial and controversial policies: **100%**

- The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology: **100%**

- The minimum percentage of the financial product's investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per extra financial criteria: **30%**

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **63.1%**

...and compared to previous periods ?

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's portfolio compliant with the reference benchmark eligible stock criteria taking into account sectorial and controversial policies	100%	100%	100%	100%	In line with the financial product's commitment
The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology	100%	100%	100%	100%	In line with the financial product's commitment
The minimum percentage of the financial product's investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per extra financial criteria	20%	20%	20%	30%	In line with the financial product's commitment

The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation	62.1%	58.2%	59.1%	63.1	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The investment manager is using, as of the date of the prospectus, the BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus,to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them

against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector

5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://group.bnpparibas/en/sfdr-sustainability-related-disclosures

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations (SFDR: Sustainability-related disclosures - BNP Paribas)

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31.12.2025

Largest investments**	Sector	% Assets*	Country**
ORACLE CORP	Information Technology	4.26%	United States

What was the proportion of sustainability-related investments?

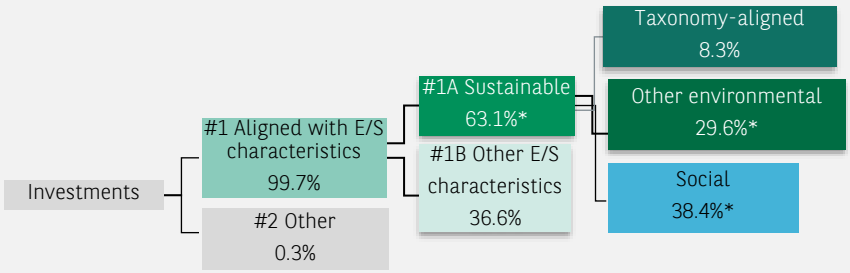

Asset allocation describes the share of investments in specific assets.

What was the asset allocation ?

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 99.7%.

The proportion of sustainable investments of the financial product is 63.1%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

- *In which economic sectors were the investments made ?*

Sectors (level 2)	% Asset
Software & Services	19,57%
Pharmaceuticals Biotechnology & Life Sciences	13,56%
Technology Hardware & Equipment	6,71%
Capital Goods	6,69%
Banks	6,05%
Equity Real Estate Investment Trusts (REITs)	4,90%
Health Care Equipment & Services	4,52%
Financial Services	4,46%
Food Beverage & Tobacco	3,73%
Materials	3,71%
Semiconductors & Semiconductor Equipment	3,53%
Utilities	2,96%
Household & Personal Products	2,92%
Consumer Durables & Apparel	2,90%
Insurance	2,62%
Commercial & Professional Services	2,53%
Real Estate Management & Development	1,71%
Consumer Services	1,65%
Transportation	1,30%
Consumer Discretionary Distribution & Retail	1,04%
Media & Entertainment	0,92%
Telecommunication Services	0,89%
Automobiles & Components	0,69%
Cash	0,27%
Consumer Staples Distribution & Retail	0,17%

Source of data: BNP Paribas Asset Management,calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No:

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

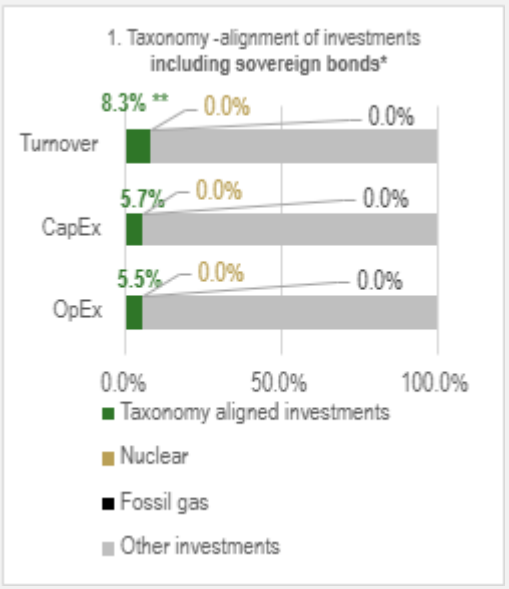

Taxonomy-aligned activities are expressed as a share of:

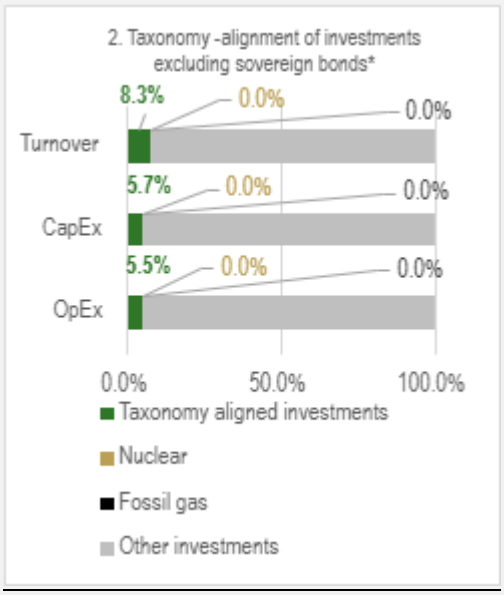

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2022*	3.2%	/	/
2023**	3.3%	/	/
2024***	3.9%	3.1%	2.6%
2025***	8.3%	5.7%	5.5%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the current level of data at the disposal of the management company at the time.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **29.6%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **38.4%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product excludes companies violating international norms, exposed to tobacco or controversial weapons, as well as companies active in sectors with possible negative impacts on the climate in accordance with the exclusion criteria defined in the Article 12. 1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission. The details on how the exclusions are applied, depending on the asset classes, are available on our website (https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ section « PAB exclusions for ESMA Guidelines »).

- -The financial product complies, as part of its investment policy, with the list of exclusion criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https//docfinder.bnpparibas-am-com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ . As the financial product is a passively-managed ETF, the implementation of exclusions depends on the index provider's own ESG data and methodology.

- The GHG intensity of the investee companies in portfolio is lower than that of the extra-financial investment universe (PAI 3).

- The percentage of companies of the financial product's portfolio without carbon emission reduction initiative is lower than that of its investment universe (Volontary Environmental PAI 4)

- The financial product shall comply with the eligible stock criteria by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

- - The financial product shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology

- The financial product's investment universe of the investment strategy, as defined in the Prospectus, shall be reduced by a minimum of 30% due to exclusion of securities with low ESG score and/or sector exclusions and/or other extra-financial criteria.

- The financial product shall have the weighted average GHG intensity of its portfolio at least 50% lower than the weighted average GHG intensity of its investment universe.

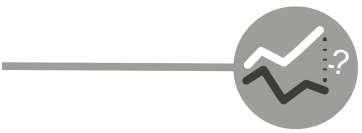

- The financial product shall achieve an annual decarbonisation target of at least 7%.

- The financial product shall invest at least 40% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

  There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

  In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

The Euronext Low Carbon 300 World (EUR) NR Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: www.euronext.com/.

- *How does the reference benchmark differ from a broad market index?*

  The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*".

- *How did this financial product perform compared with the reference benchmark?*

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

- *How did this financial product perform compared with the broad market index?*

	GHG emissions [1,2]	ESG score[2]
Financial product	59.9	64.8
Broad market index[3]	114.8	54.7

(1) GHG emissions is calculated as the sum, for each GHG emissions of the investee company's (for the relevant scope), weighted by the ratio of the current value of the investment to the investee company's entreprise value..

(2) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) Euronext World (EUR) NR

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS EASY LOW VOL EUROPE **Legal Entity Identifier:** 2138005KLULNYP5HTJ87

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective** : ___%

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **62.0%** of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using ESG external and/or internal proprietary methodology(ies). As such, the product is exposed to issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The investment strategy selects issuers through:

- o A positive screening using a selectivity approach. This involves evaluation of Environmental, Social, and Governance (ESG) performance of an issuer against a combination of environmental, social and governance factors which include but not limited to :
  - Environmental: energy efficiency, reduction of emissions of greenhouse gases, treatment of waste;

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity);

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights.

o A negative screening applying exclusion criteria with regard to issuers that are in violation of international norms and convention, such as the UN Nations Global Compact principles and OECD Guidelines for Multinational Enterprises, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC) policy.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights, according to the Stewardship policy, where applicable.

In synthetic replication, engagement with issuers and exercise of voting rights, if any, are only applied for the Financing Assets underlying securities.

The BNP Paribas Low Vol Europe ESG (EUR) NR index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's economic exposure compliant with the RBC policy: **100%**

- The percentage of the financial product's economic exposure covered by the ESG analysis based on external and/or ESG proprietary methodology(ies): **100%**

- The minimum percentage of the financial product's economic exposure investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC policy and/or any other extra financial criteria: **20%**

- The weighted average ESG score of the financial product's economic exposure compared to the weighted average ESG score of its investment universe: **65.2 vs 61.0 (STOXX Europe 600 (EUR) NR)*.**

- The percentage of the financial product's economic exposure in "sustainable investments" as defined in Article 2 (17) of SFDR: **62.0%**

* Source: BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

...and compared to previous periods ?

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's economic exposure compliant with the RBC policy	100%	100%	100%	100%	In line with the financial product's commitment

The percentage of the financial product's economic exposure covered by the ESG analysis based on external and/or ESG proprietary methodology(ies)	100%	100%	100%	100%	In line with the financial product's commitment
The minimum percentage of the financial product's economic exposure investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC policy and/or any other extra financial criteria	20.0%	20.0%	20.0%	20.0%	In line with the financial product's commitment
The weighted average ESG score of the financial product's economic exposure compared tothe weighted average ESG score of its investment universe	67.3 vs 59.4	66.5 vs 59.4	66.7 vs 59.9	65.2 vs 61.0	In line with the financial product's commitment
The percentage of the financial product's reference benchmark economic exposure in "sustainable investments" as defined in Article 2 (17) of SFDR	64.5%	67.0%	69.1%	62.0%	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year.
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

As of the date of the annual report, the financial product applies synthetic replication. Consequently, the sustainable investments to which the financial product is exposed and described below are the ones of the underlying securities of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

The investment manager is using, as of the date of the prospectus, the BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus,to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS)

into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest.

Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts indicators are taken into account::

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicators
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions :

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

In synthetic replication, engagement with issuers and exercise of voting rights, if any, are only applied for the Financing Assets underlying securities.

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct

9. Lack of a human rights policy
Sovereign mandatory indicators
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement:
SFDR: Sustainability-related disclosures - BNP Paribas

What were the top investments of this financial product?

The financial product applies synthetic replication.
The top investments disclosed below are therefore twofold:

- The assets physically held at the level of the financial product
- The assets of the reference benchmark underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

Assets physically held at the level of the financial product:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31/12/2025

Largest investments**	Sector	% Assets*	Country**
ORANGE SA	Communication Services	8.71%	France
AXA SA	Financials	7.61%	France
COMPAGNIE DE SAINT GOBAIN SA	Industrials	6.72%	France
VEOLIA ENVIRON. SA	Utilities	5.99%	France
SAP	Information Technology	5.41%	Germany
DEUTSCHE BANK AG N	Financials	4.70%	Germany
IVECO GROUP NV	Industrials	4.51%	Italy
TELE2 CLASS B B	Communication Services	4.21%	Sweden
BOUYGUES SA	Industrials	4.05%	France
TELIA COMPANY	Communication Services	4.01%	Sweden
CREDIT AGRICOLE SA	Financials	3.84%	France
DANONE SA	Consumer Staples	3.79%	France
BOLIDEN	Materials	3.79%	Sweden
BNP PARIBAS SA	Financials	3.79%	France
VINCI SA	Industrials	3.39%	France

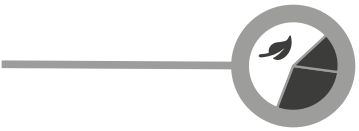

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

Assets of the reference benchmark underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy:

Largest investments**	Sector	% Assets*	Country**
NOVARTIS AG	Health Care	2.97%	Switzerland
NESTLE SA	Consumer Staples	2.61%	Switzerland
SAP	Information Technology	2.14%	Germany
INVESTOR CLASS B	Financials	2.06%	Sweden

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on the underlying portfolio data of the investment strategy and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

What was the asset allocation ?

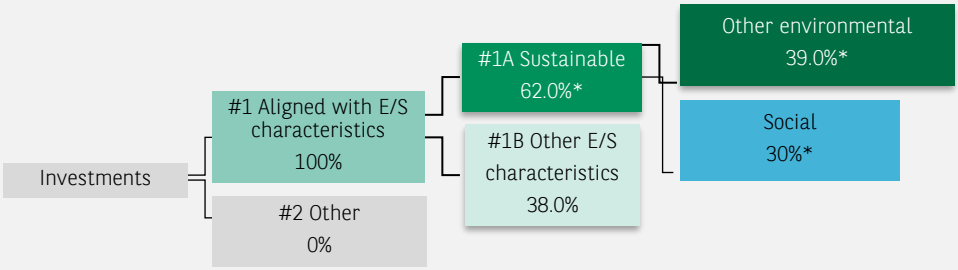

Asset allocation describes the share of investments in specific assets.

As of the date of the annual report, the financial product applies synthetic replication. Consequently, the asset allocation for this financial product is the ones of the underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 100%.

The proportion of sustainable investments of the financial product is 62.0%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

The financial product applies synthetic replication.
The top investments disclosed below are therefore twofold:

- The assets physically held at the level of the financial product
- The assets of the reference benchmark underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

Assets physically held at the level of the financial product:

Sectors	% Asset
Capital Goods	21.82%
Telecommunication Services	16.93%
Banks	12.98%
Cash	10.34%
Insurance	10.11%
Utilities	8.33%
Software & Services	6.47%
Automobiles & Components	4.28%
Food Beverage & Tobacco	3.79%
Materials	3.79%
Pharmaceuticals Biotechnology & Life	2.66%
Health Care Equipment & Services	1.20%
Commercial & Professional Services	0.56%
Financial Services	-3.27%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

Assets of the reference benchmark underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy:

Sectors	% Asset
Industrials	29.6%
Financials	20.9%
Consumer Staples	14.8%
Health Care	6.7%
Utilities	6.3%
Consumer Discretionary	5.7%
Real Estate	4.9%
Communication Services	4.9%
Materials	3.5%
Information Technology	2.7%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The sector breakdown is based on the underlying portfolio data of the investment strategy and is based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, and it did not do so.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

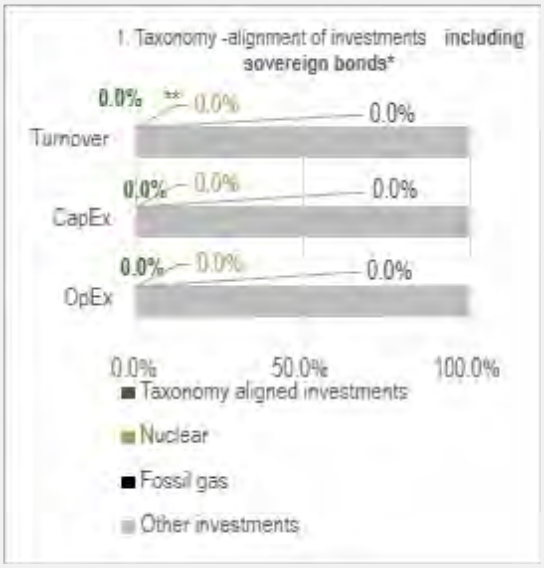

☒ No:

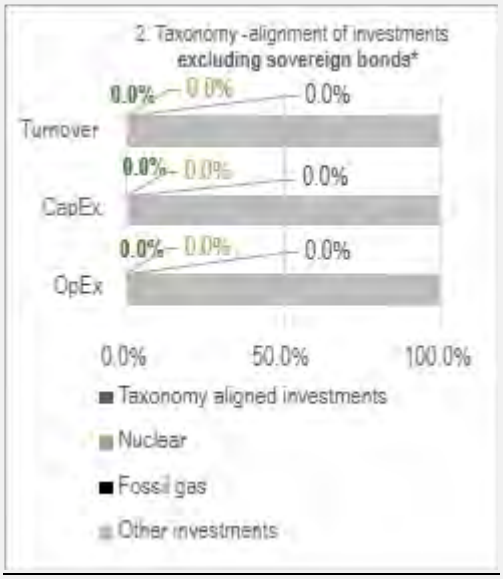

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

	Revenue	Capex	Opex
2022*	0.0%	/	/
2023**	0.0%	/	/
2024***	0.0%	0.0%	0.0%
2025***	0.0%	0.0%	0.0%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the current level of data at the disposal of the management company at the time.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **39.0%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **30.0%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product investment strategy shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be In violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)

- The financial product investment strategy shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the proprietary and/or external ESG methodology.
- The financial product's investment universe of the investment strategy shall be reduced by a minimum of 20% due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC Policy and/or other extra-financial criteria.

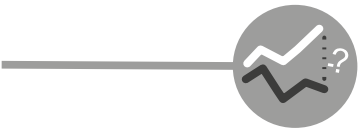

- The financial product shall have the weighted average ESG score of its investment strategy portfolio higher than the weighted average ESG score of its investment universe.

- The financial product shall have the weighted average greenhouse gas (GHG) intensity of its investment strategy portfolio lower than the weighted average greenhouse gas (GHG) intensity of its investment universe.

- The financial product shall invest at least 45% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR and as disclosed in the asset allocation below. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus

  There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance, between two strategy reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the reference benchmark administrator rules.

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

The BNP Paribas Low Vol Europe ESG (NTR) index (Bloomberg: BNPIFELE index) has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: https://indx.bnpparibas.com/nr/FELETR.pdf.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "How did the sustainability indicators perform?"

How did this financial product perform compared with the reference benchmark?

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

How did this financial product perform compared with the broad market index?

	GHG emissions [1,2]	ESG score [2]
Financial product	75.2	65.2
Broad market index [3]	93.2	61.0

(1) GHG emissions is calculated as the sum, for each GHG emissions of the investee company's (for the relevant scope), weighted by the ratio of the current value of the investment to the investee company's entreprise value. The ghg is expressed in tons of CO2 equivalent per million euros of entreprise value.

(2) Source: BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) STOXX Europe 600 (EUR) NR

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY MSCI CHINA Min TE **Legal Entity Identifier:** 213800KHB16W2AA8LP59

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective** : ___%

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **20.4%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases, treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation on international norms and convention, or operate in sensitive sectors as defined by external data providers.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

The MSCI China Select Filtered Min TE (USD) NR has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product..

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product, and are based on the reference benchmark ESG methodology:

- The percentage of the financial product's portfolio compliant with the the reference benchmark business involvement and controversies exclusion criteria: **100%**

- The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology: **100%**

- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe: **50.9 vs 49.3 (MSCI China (USD) NR)**

- The average grennhouse gas ("GHG") intentisy of the financial product's portfolio compared to the GHG intensity of its investment universe: **126.2 vs 219.6 (MSCI China (USD) NR)**

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **20.4%**

...and compared to previous periods ?

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's portfolio compliant with the the reference benchmark business involvement and controversies exclusion criteria	100%	100%	100%	100%	In line with the financial product's commitment
The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology	100%	100%	100%	100%	In line with the financial product's commitment
The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe	55.3 vs 48.2	53.9 vs 47.4	51.7 vs 47.2	50.9 vs 49.3	In line with the financial product's commitment
The average grennhouse gas ("GHG") intentisy of the financial product's portfolio compared to the GHG intensity of its investment universe	n.a	n.a	172.2	126.2	In line with the financial product's commitment
The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation	30.2%	36.9%	31.9%	20.4%	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.

*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

   a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

   b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

   a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy
More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations (SFDR: Sustainability-related disclosures - BNP Paribas)

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31.12.2025

Largest investments**	Sector	% Assets*	Country**
TENCENT HOLDINGS LTD	Communication Services	17,44%	China
ALIBABA GROUP HOLDING LTD	Consumer Discretionary	11,13%	Hong Kong

Source of data: BNP Paribas Asset Management,calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

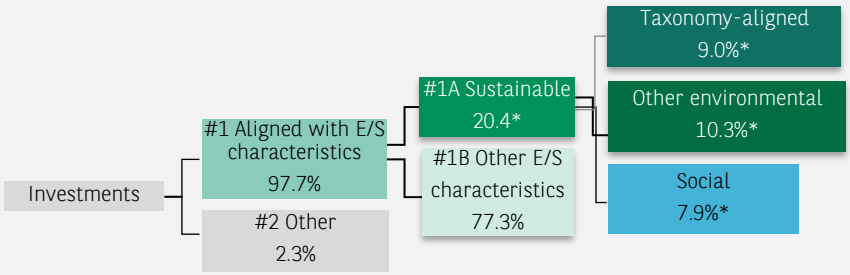

What was the asset allocation ?

Asset allocation describes the share of investments in specific assets.

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 97.7%.

The proportion of sustainable investments of the financial product is 20.4%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

- *In which economic sectors were the investments made ?*

Sectors (Level 2)	% Asset
Media & Entertainment	22,55%
Consumer Discretionary Distribution & Retail	16,16%
Banks	10,72%

Household & Personal Products	0,18%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

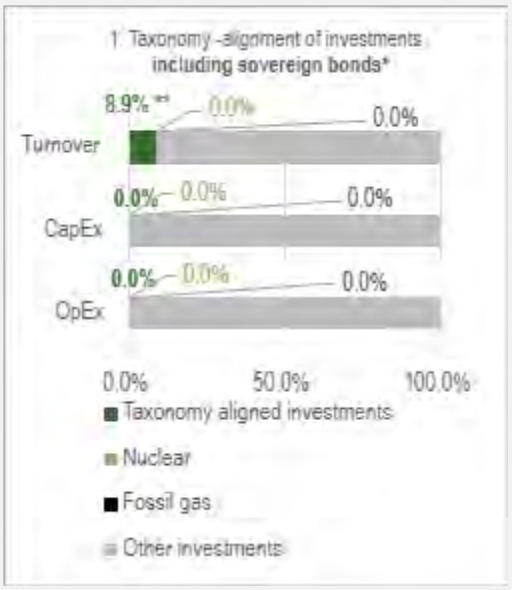

☒ No:

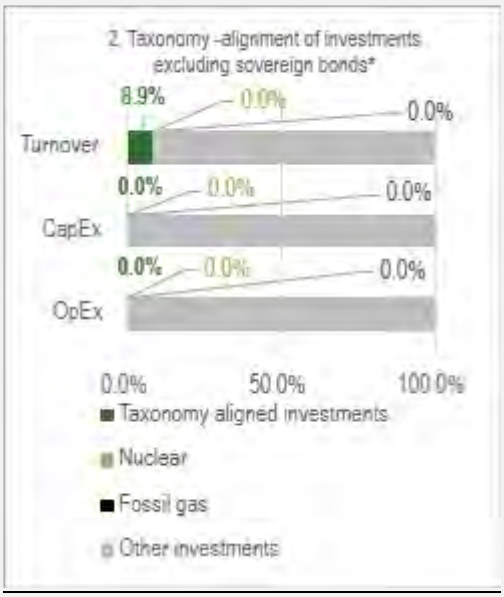

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue		
2022*	6.7%	/	/
2023**	10.5%	/	/
2024***	9.5%	0.0%	0.0%
2025***	8.9%	0.0%	0.0%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the current level of data at the disposal of the management company at the time.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **10.3%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **7.9%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product shall comply with the reference benchmark business involvement and controversies exclusion criteria.

- The financial product shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.

- The financial shall have a weighted average ESG score better than the weighted average ESG score of its investment universe

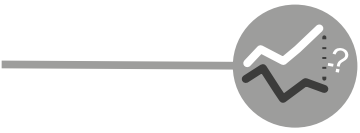

- The financial shall have an average GHG intensity at least 20% lower than the average GHG intensity of its investment universe

- The financial product shall invest at least 10% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments

contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: https://www.bnpparibas-am.com/en/sustainability-documents/

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

The MSCI China Select Filtered Min TE (USD) NR Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: www.msci.com.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*".

How did this financial product perform compared with the reference benchmark?

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

How did this financial product perform compared with the broad market index?

	GHG emissions1	ESG score[1]
Financial product	126.2	50.9
Broad market index[2]	219.6	59.3

(1) (1) GHG emissions is calculated as the sum, for each GHG emissions of the investee company's (for the relevant scope), weighted by the ratio of the current value of the investment to the investee company's entreprise value.

(2) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) MSCI China (USD) NR

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY MSCI Emerging Min TE **Legal Entity Identifier:** 213800ZQJJHQ72L24B74

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

- ☐ Yes
- ☒ No

- ☐ It made **sustainable investment with an environmental objective:** ___%
  - ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☐ It made **sustainable investments with a social objective** : ___%
- ☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **40.8%** of sustainable investments
  - ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
  - ☒ with a social objective
- ☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but noct limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases, treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms andconvention, or operate in sensitive sectors as defined by external data providers.

The MSCI EM Select Filtered Min TE (USD) NR has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's economic exposure compliant with the reference benchmark business involvement exclusion criteria: **100%**

- The percentage of the financial product's economic exposure covered by the ESG analysis based on the index provider ESG methodology: **99.4%**

- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe: **57.3 vs 57.3** (**MSCI Emerging Markets (Free) (USD) NR**)

-The average greenhouse gas ("GHG") intensity of the financial product's portfolio compared to the GHG intensity of its investment universe: **261.5 vs 350.1**

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **40.8%**

...and compared to previous periods ?

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's economic exposure compliant with the reference benchmark business involvement exclusion criteria	100%	100%	100%	100%	In line with the financial product's commitment
The percentage of the financial product's economic exposure covered by the ESG analysis based on the index provider ESG methodology	100%	100%	100%	100%	In line with the financial product's commitment
The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe	/	/	56.0 vs 53.9	57.3 vs 57.3	In line with the financial product's commitment
The average greenhouse gas ("GHG") intensity of the financial product's portfolio compared to the GHG intensity of its investment universe	/	/	/	261.5 vs 350.1	In line with the financial product's commitment
The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation	28.3%	31.6%	36.9%	40.8%	In line with the financial product's commitment

. *Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quarterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM.

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The investment manager is using, as of the date of the prospectus, the BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus,to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations (SFDR: Sustainability-related disclosures - BNP Paribas

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31.12.2025

Largest investments**	Sector	% Assets*	Country**
TAIWAN SEMICONDUCTOR MANUFACTURING CO LTD	Information Technology	11.91%	Taiwan

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

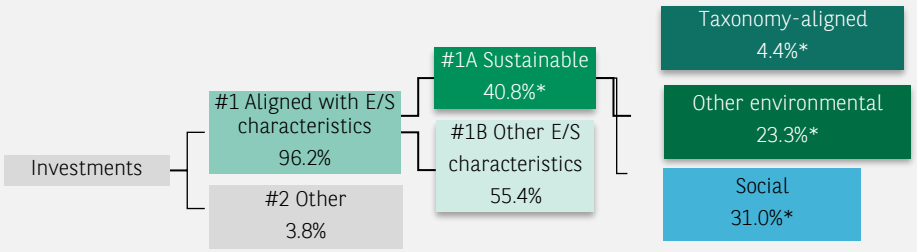

What was the asset allocation ?

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is **96.2%.**

The proportion of sustainable investments of the financial product is **40.8%.**

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?".

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for

- *In which economic sectors were the investments made ?*

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European

Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

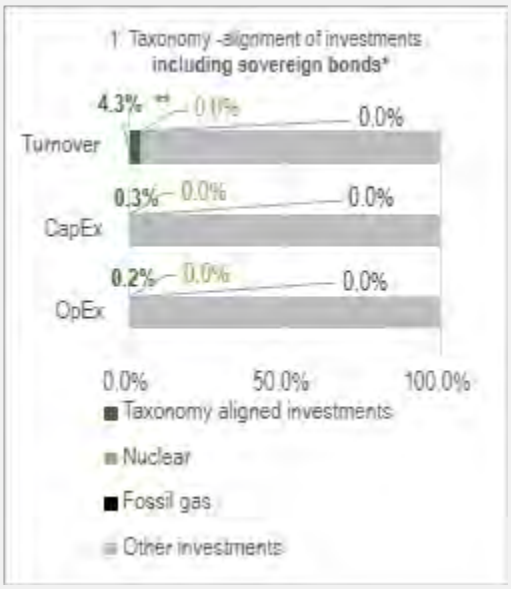

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

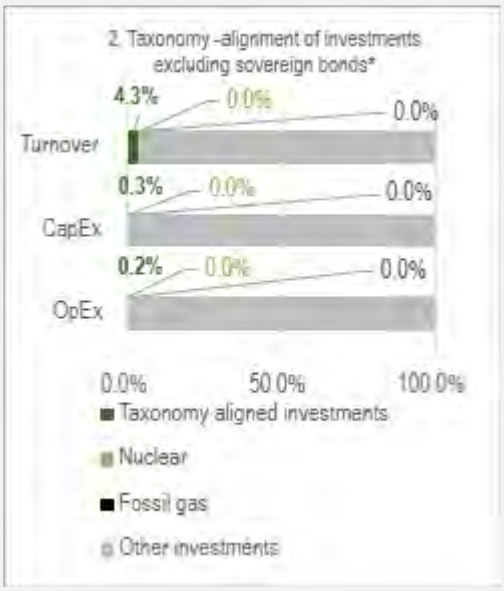

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No:

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2022*	0%	/	/
2023**	0%	/	/
2024***	3.5%	0.3%	0.2%
2025***	4.3%	0.3%	0.2%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quarterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM.

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the level of data at the disposal of the management company at the time.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **23.3%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **31.0%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product investment strategy shall comply with the reference benchmark business involvement and controversies exclusion criteria.

- The financial product investment strategy shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.

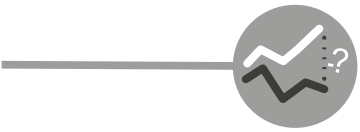

- The financial shall have a weighted average ESG score better than the weighted average ESG score of its investment universe.

- The financial shall have an average GHG intensity at least 20% lower than the average GHG intensity of its investment universe

The financial product shall invest at least 20% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

The MSCI EM Select Filtered Min TE (USD) NR has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: www.msci.com.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard

to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*".

- *How did this financial product perform compared with the reference benchmark?*

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

- *How did this financial product perform compared with the broad market index?*

	GHG emissions1	ESG score[1]
Financial product	261.5	57.29
Broad market index[2]	350.1	57.28

(1) GHG emissions is calculated as the sum, for each GHG emissions of the investee company's (for the relevant scope), weighted by the ratio of the current value of the investment to the investee company's entreprise value.

(2) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) MSCI Emerging Markets (Free) (USD) NR

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY MSCI Emerging SRI PAB **Legal Entity Identifier:** 213800756937T4BVLNT78

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective** : ___%

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **49.0%** of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but noct limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases, treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by external data providers.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable, in collaboration with BNP Paribas Asset Management's Sustainability Centre.

The MSCI Emerging SRI S-Series Select PAB 5% Capped (NTR) index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The weightings of the Environmental (E), Social (S) and Governance (G) criteria in MSCI's proprietary ESG rating methodology may vary by sector, with some having weightings below 20%. Investors may find details on MSCI's ESG Rating Methodology Document via the following link: https://support.msci.com/support/emea-esg-and-climate-labels/explanation-of-esg-pillar/04461552866 - MSCI after creating an account.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The following sustainability indicators are used to measure the attainment of the sustainable investment objective of the financial product, and are based on the reference benchmark ESG methodology:

- The percentage of the financial product's portfolio compliant with the the reference benchmark business involvement and controversial exclusion criteria: **100%**

- The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology: **100%**

- The minimum percentage of the financial product's investment universe reduction by sector due to exclusion of securities with low ESG score and/or sector exclusions and/or any other extra financial criteria: **20%**

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **49.0%**

* Source: BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

- *...and compared to previous periods ?*

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's portfolio compliant with the the reference benchmark business involvement and controversial exclusion criteria	100%	100%	100%	100%	In line with the financial product's commitment
The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology	100%	100%	100%	100%	In line with the financial product's commitment
The minimum percentage of the financial product's investment universe reduction by sector due to exclusion of securities with low ESG score and/or sector exclusions and/or any other extra financial criteria	/	/	/	20%	In line with the financial product's commitment
The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation	42.9%	47.4%	45.3%	49.0%	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

As of the date of the annual report, the financial product applies synthetic replication. Consequently, the sustainable investments to which the financial product is exposed and described below are the ones of the underlying securities of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

The investment manager is using, as of the date of the prospectus, BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus, to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives

Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations SFDR: Sustainability-related disclosures - BNP Paribas

What were the top investments of this financial product?

The financial product applies synthetic replication.
The top investments disclosed below are therefore twofold:
- The assets physically held at the level of the financial product
- The assets of the reference benchmark underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

Assets physically held at the level of the financial product:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31.12.2025

Largest investments**	Sector	% Assets*	Country**

** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

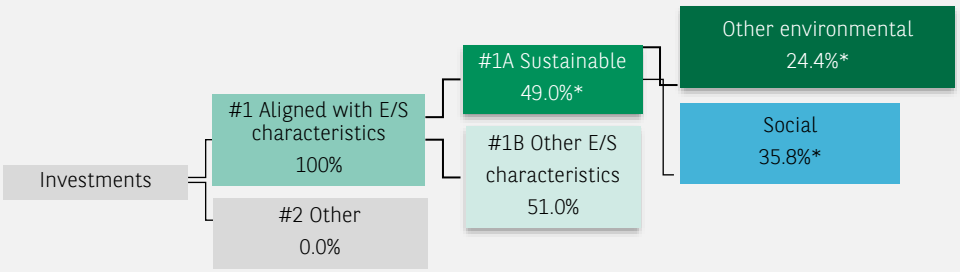

What was the asset allocation ?

Asset allocation describes the share of investments in specific assets.

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 100%.

The proportion of sustainable investments of the financial product is 49.0%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

The financial product applies synthetic replication.
The top investments disclosed below are therefore twofold:

- The assets physically held at the level of the financial product
- The assets of the reference benchmark underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

Assets physically held at the level of the financial product:

Sectors (Level2)	% Asset
Semiconductors & Semiconductor Equipment	26,57%
Software & Services	25,67%
Cash	13,06%
Automobiles & Components	7,69%
Health Care Equipment & Services	7,20%
Financial Services	4,81%
Insurance	4,80%
Capital Goods	3,17%
Consumer Services	2,81%
Materials	2,70%
Technology Hardware & Equipment	2,64%
Equity Real Estate Investment Trusts (REITs)	2,58%
Consumer Durables & Apparel	2,06%
Real Estate Management & Development	1,79%
Media & Entertainment	1,73%
Banks	-9,29%

Source of data: BNP Paribas Asset Management, calculated on 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

Assets of the reference benchmark underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy:

Sectors	% Asset
Financials	24,5%
Information Technology	15,2%
Industrials	13,4%
Consumer Discretionary	11,7%
Consumer Staples	10,1%
Communication Services	8,7%
Health Care	6,5%
Real Estate	5,0%
Materials	4,4%
Utilities	0,4%

Source of data: BNP Paribas Asset Management, calculated on 31/12/2025. The sector breakdown is based on the underlying portfolio data of the investment strategy and is based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, and it did not do so.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

- ○ *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

  - ☐ Yes:
    - ☐ In fossil gas
    - ☐ In nuclear energy
  - ☒ No:

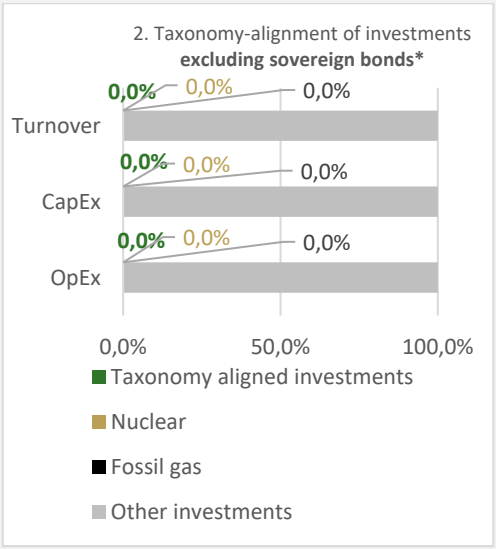

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2022*	0%	/	/
2023**	0%	/	/
2024***	0%	0%	0%
2025***	0%	0%	0%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the current level of data at the disposal of the management company at the time.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **24.4%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **35.8%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product.

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product excludes companies violating international norms, exposed to tobacco or controversial weapons, as well as companies active in sectors with possible negative impacts on the climate in accordance with the exclusion criteria defined in the Article 12. 1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission. The details on how the exclusions are applied, depending on the asset classes, are available on our website (https://docfinder.bnpparibas-am.com/api/files/2895a45abb7a-44f6-8e48-990be2616498/ – section « PAB exclusions for ESMA Guidelines »).

- The financial product complies, as part of its investment policy, with the list of exclusion criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https//docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/. As the financial product is a passively-managed ETF, the implementation of exclusions depends on the index provider's own ESG data and methodology.

- The GHG intensity of the investee companies in portfolio is lower than that of the extra-financial investment universe (PAI 3).

- The portfolio's board gender diversity ratio is higher than that of the extra-financial investment universe (PAI 13).

- The financial product shall comply with the reference benchmark business involvement and controversies exclusion criteria.

- The financial product shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.

- The financial product aims to include the securities with the highest ESG ratings making up 25% of the market capitalization in each sector and region of the investment universe, as defined in the Prospectus.

- The financial product shall have the weighted average GHG intensity of its investment strategy portfolio at least 50% lower than the weighted average GHG intensity of its investment universe.

- The financial product investment strategy portfolio shall achieve an annual decarbonisation target of at least 7%.

- The financial product shall invest at least 30% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

  There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

  In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

The MSCI Emerging SRI S-Series PAB 5 % Capped (NTR) index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: www.msci.com.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*".

- *How did this financial product perform compared with the reference benchmark?*

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

- *How did this financial product perform compared with the broad market index?*

	GHG emissions[1,2]	ESG score[2]
Financial product	118.4	63.0
Broad market index[3]	359.8	55.1

(1) GHG emissions is calculated as the sum, for each GHG emissions of the investee company's (for the relevant scope), weighted by the ratio of the current value of the investment to the investee company's entreprise value.

(2) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) MSCI Emerging Markets (Free) (USD) NR

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY MSCI EMU Min TE **Legal Entity Identifier:** 213800EDTW62QDILKX66

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective** : ___%

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **63.9%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases, treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms andconvention, or operate in sensitive sectors as defined by external data providers..

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

The MSCI EMU Select Filtered Min TE (EUR) NR has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product, and are based on the reference benchmark ESG methodology:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The percentage of the financial product's portfolio compliant with the the reference benchmark business involvement exclusion criteria: **100%**

- The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology: **99.8%**

- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus : **64.7 VS 63.7 (MSCI EMU (EUR) NR)**

- The average grennhouse gas ("GHG") intentisy of the financial product's portfolio compared to the GHG intensity of its investment universe : **82.8**

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **60.7%**

...and compared to previous periods ?

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's portfolio compliant with the the reference benchmark business involvement exclusion criteria	100%	100%	100%	100%	In line with the financial product's commitment
The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology	100%	100%	100%	99.8%	In line with the financial product's commitment
The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus	/	/	63.1 vs 62.3	64.7 VS 63.7	In line with the financial product's commitment
The average grennhouse gas ("GHG") intentisy of the financial product's portfolio compared to the GHG intensity of its investment universe	/	/	85.9	82.8	In line with the financial product's commitment
The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation	62.2%	58.6%	60.7%	63.9%	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quarterly weighted average.
***Figures reported in 2024 and 2025 are expressed as a quarterly weighted based on the AUM.

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The investment manager is using, as of the date of the prospectus, the BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus,to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio

10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

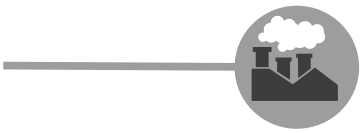

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations (SFDR: Sustainability-related disclosures - BNP Paribas)

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31.12.2025

Largest investments**	Sector	% Assets*	Country**
ASML HOLDING NV	Information Technology	5.84%	Netherlands
SAP	Information Technology	3.61%	Germany

What was the proportion of sustainability-related investments?

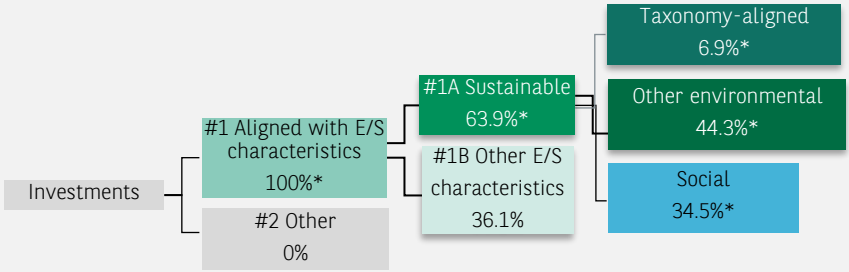

Asset allocation describes the share of investments in specific assets.

What was the asset allocation ?

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 100%.

The proportion of sustainable investments of the financial product is 63.9%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

Sectors (Level 2)	% Asset
Capital Goods	17.42%
Banks	17.09%
Insurance	8.10%
Semiconductors & Semiconductor Equipment	7.59%
Utilities	6.42%
Consumer Durables & Apparel	4.73%
Software & Services	4.42%
Pharmaceuticals Biotechnology & Life Sciences	4.35%
Materials	3.45%
Financial Services	3.14%
Food Beverage & Tobacco	3.12%
Energy	2.53%
Telecommunication Services	2.46%
Consumer Discretionary Distribution & Retail	2.32%
Automobiles & Components	2.31%
Household & Personal Products	2.16%
Health Care Equipment & Services	1.94%
Transportation	1.56%
Consumer Services	0.87%
Media & Entertainment	0.75%
Consumer Staples Distribution & Retail	0.74%
Commercial & Professional Services	0.65%
Equity Real Estate Investment Trusts (REITs)	0.65%
Technology Hardware & Equipment	0.52%
Real Estate Management & Development	0.48%
Cash	0.23%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

○ *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

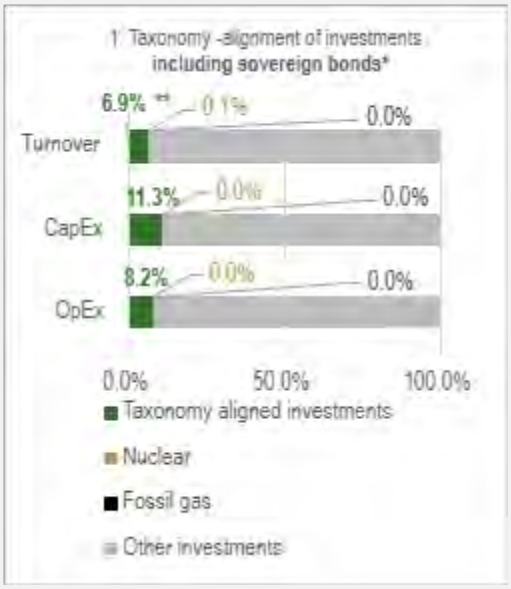

☒ Yes:

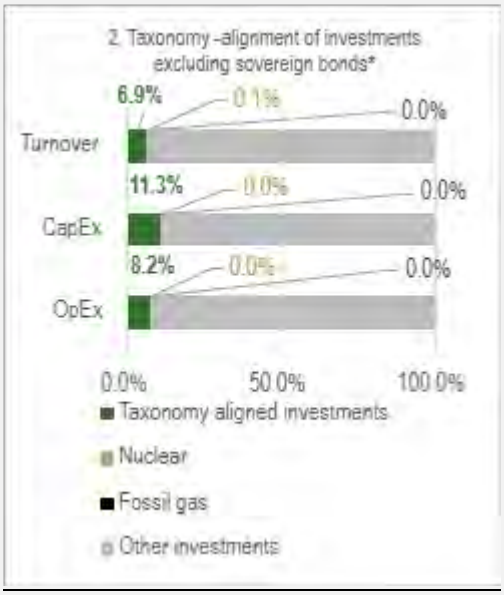

☐ In fossil gas ☒ In nuclear energy

☐ No:

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

z

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

	Revenue	Capex	Opex
2022*	4.8%	/	/
2023**	5.0%	/	/
2024***	6.5%	11.5%	8.4%
2025***	6.9%	11.3%	8.2%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quarterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM.

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the level of data at the disposal of the management company at the time.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **44.3%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **34.5%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product shall comply with the reference benchmark business involvement and controversies exclusion criteria.

- The financial product shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.

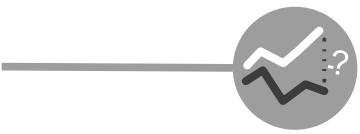

- The financial shall have a weighted average ESG score better than the weighted average ESG score of its investment universe

- The financial shall have an average GHG intensity at least 20% lower than the average GHG intensity of its investment universe.

- The financial product shall invest at least 40% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What were the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

The MSCI EMU Select Filtered Min TE (EUR) NR Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: www.msci.com.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*".

How did this financial product perform compared with the reference benchmark?

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

How did this financial product perform compared with the broad market index?

	ESG score[1]
Financial product	64.7
Broad market index[2]	63.7

(1) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(2) MSCI EMU (EUR) NR

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS EASY MSCI EMU SRI PAB **Legal Entity Identifier:** 213800YQ9QNX31KMEA10

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective** : ___%

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **64.0%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using ESG external and/or internal proprietary methodology(ies). As such, the product is exposed to issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but noct limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases, treatment of waste
- Social: respect of human rights and workers' rights, human resources management (workers' health and safety,
diversity)

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by external data providers.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights, according to the Stewardship policy, where applicable.

The MSCI EMU SRI S-Series PAB 5% Capped (NTR) index (Bloomberg: M7CXEMS index) has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The weightings of the Environmental (E), Social (S) and Governance (G) criteria in MSCI's proprietary ESG rating methodology may vary by sector, with some having weightings below 20%. Investors may find details on MSCI's ESG Rating Methodology Document via the following link: https://support.msci.com/support/emea-esg-and-climate-labels/explanation-of-esg-pillar/04461552866 - MSCI after creating an account

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the reference benchmark business involvement and controversies exclusion criteria: **100%**
- The percentage of the financial product's economic exposure covered by the ESG analysis based on the index provider ESG methodology: **100%**
- TThe minimum percentage of the financial product's investment universe reduction by sector due to exclusion of securities with low ESG score and/or sector exclusions and/or any other extra financial criteria;: **20%**
- The percentage of the financial product's economic exposure invested in "sustainable investments" as defined in Article 2 (17) of SFDR: **64.0%**

...and compared to previous periods ?

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's portfolio compliant with the reference benchmark business involvement and controversies exclusion criteria	100%	100%	100%	100%	In line with the financial product's commitment
The percentage of the financial product's economic exposure covered by the ESG analysis based on the index provider ESG methodology	100%	100%	100%	100%	In line with the financial product's commitment
The minimum percentage of the financial product's investment universe reduction by sector due to exclusion of securities with low ESG score and/or sector exclusions and/or any other extra financial criteria;	/	/	/	20%	In line with the financial product's commitment
The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation	70.4%	70.4%	68.0%	64.0%	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.

*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The investment manager is using, as of the date of the prospectus, the BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus,to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water

9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

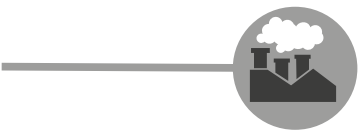

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31/12/2025

Largest investments**	Sector	% Assets*	Country**
ASML HOLDING NV	Information Technology	7.07%	Netherlands
SCHNEIDER ELECTRIC	Industrials	4.39%	France
AXA SA	Financials	4.34%	France
DEUTSCHE BOERSE AG N	Financials	3.21%	Germany
CREDIT AGRICOLE SA	Financials	3.12%	France
GENERALI	Financials	2.74%	Italy
LOREAL SA	Consumer Staples	2.71%	France
KBC GROEP NV	Financials	2.66%	Belgium
HERMES INTERNATIONAL	Consumer Discretionary	2.42%	France
AMADEUS IT GROUP SA	Consumer Discretionary	2.20%	Spain
INFINEON TECHNOLOGIES AG N	Information Technology	2.19%	Germany

FRESENIUS SE AND CO KGAA	Health Care	2.14%	Germany

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

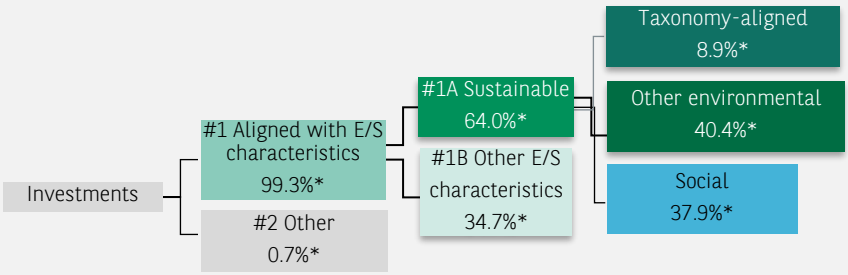

What was the asset allocation ?

Asset allocation describes the share of investments in specific assets.

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 99.3%.

The proportion of sustainable investments of the financial product is 64.0%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

Sectors (Level 2)	% Asset
Insurance	13.02%
Capital Goods	11.46%
Banks	11.27%
Semiconductors & Semiconductor Equipment	9.26%
Health Care Equipment & Services	7.00%
Pharmaceuticals Biotechnology & Life Sciences	6.79%
Household & Personal Products	6.55%
Utilities	6.51%
Consumer Durables & Apparel	6.45%
Financial Services	4.52%
Materials	3.57%
Telecommunication Services	3.06%
Food Beverage & Tobacco	2.29%
Consumer Services	2.20%
Consumer Discretionary Distribution & Retail	2.00%
Commercial & Professional Services	1.26%
Cash	0.82%
Transportation	0.77%
Consumer Staples Distribution & Retail	0.76%
Media & Entertainment	0.44%
Derivatives	0.01%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

☐ Yes:

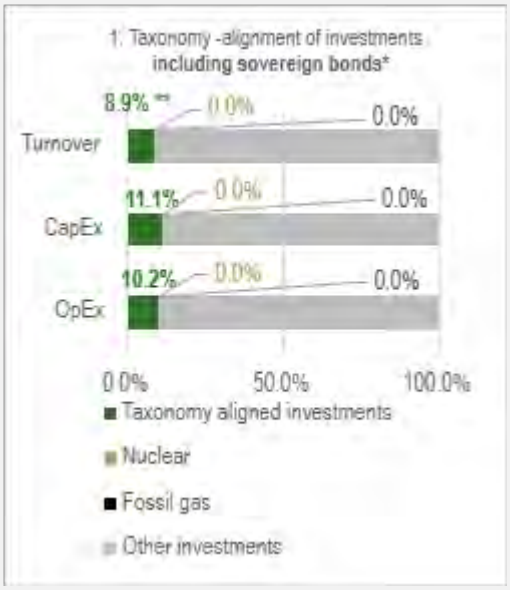

☐ In fossil gas ☐ In nuclear energy

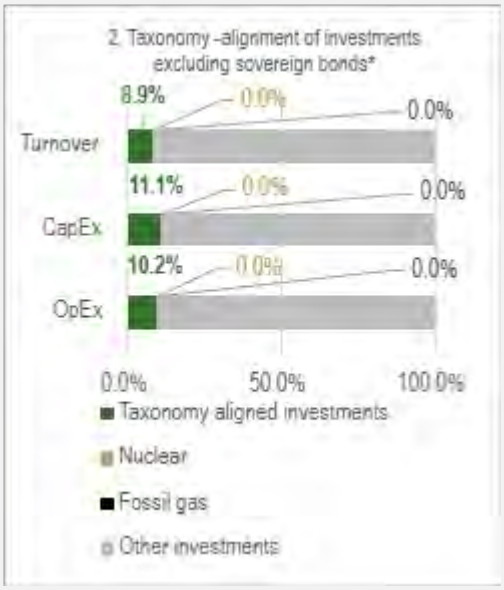

☒ No:

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?*

	Revenue	Capex	Opex
2022*	7.7%	/	/
2023**	8.6%	/	/
2024***	9.1%	12.2%	10.6%
2025***	8.9%	11.1%	10.2%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025are expressed as a quarterly weighted average based on the AUM

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the current level of data at the disposal of the management company at the time.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **40.4%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **37.9%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product excludes companies violating international norms, exposed to tobacco or controversial weapons, as well as companies active in sectors with possible negative impacts on the climate in accordance with the exclusion criteria defined in the Article 12. 1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission. The details on how the exclusions are applied, depending on the asset classes, are available on our website (https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ section « PAB exclusions for ESMA Guidelines »).

- The financial product complies, as part of its investment policy, with the list of exclusion criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ . As the financial product is a passively-managed ETF, the implementation of exclusions depends on the index provider's own ESG data and methodology

- - The GHG intensity of the investee companies in portfolio is lower than that of the extra-financial investment universe (PAI 3).

- The portfolio's board gender diversity ratio is higher than that of the extra-financial investment universe (PAI 13)

- The financial product shall comply with the reference benchmark business involvement and controversies exclusion criteria.

- The financial product shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.

- The financial product aims to include the securities with the highest ESG ratings making up 25% of the market capitalization in each sector and region of the investment universe, as defined in the Prospectus.

- The financial product investment strategy portfolio shall achieve an annual decarbonisation target of at least 7%.

- The financial product shall invest 55% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

  There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

  In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

The MSCI EMU SRI S-Series PAB 5% Capped (NTR) index (Bloomberg: M7CXEMS index) has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: www.msci.com.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*".

How did this financial product perform compared with the reference benchmark?

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

How did this financial product perform compared with the broad market index?

	GHG emissions[1,2]	ESG score[2]
Financial product	34.1	66.3
Broad market index[3]	115.5	63.5

(1) GHG emissions is calculated as the sum, for each GHG emissions of the investee company's (for the relevant scope), weighted by the ratio of the current value of the investment to the investee company's entreprise value..

(2) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) MSCI EMU (EUR) NR

cz Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY MSCI EUROPE MIN TE **Legal Entity Identifier:** 213800R657WUBCZ7V163

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective** : ___%

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **59.9%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases, treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms andconvention, or operate in sensitive sectors as defined by external data providers..

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

The MSCI Europe Select Filtered Min TE (EUR) NR has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product, and are based on the reference benchmark ESG methodology:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The percentage of the financial product's portfolio compliant with the the reference benchmark business involvement exclusion criteria: **100%**

- The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology: **99.6%**

- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus **62.9 vs 61.2 (MSCI Europe (EUR) NR)**

- The average greenhouse gas ("GHG") intentisy of the financial product's portfolio compared to the GHG intensity of its investment universe : **75.3**

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **59.9%**

- *...and compared to previous periods ?*

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's portfolio compliant with the the reference benchmark business involvement exclusion criteria	100%	100%	100%	100%	In line with the financial product's commitment
The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology	100%	100%	100%	99.6%	In line with the financial product's commitment
The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus	/	/	61.9 vs 60.1	62.9 vs 61.2	In line with the financial product's commitment
The average grennhouse gas ("GHG") intentisy of the financial product's portfolio compared to the GHG intensity of its investment universe	/	/	91.1	75.3	In line with the financial product's commitment
The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation	62.2%	58.6%	56.1%	59.9%	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quarterly weighted average.
***Figures reported in 2024 and 2025are expressed as a quarterly weighted based on the AUM.

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The investment manager is using, as of the date of the prospectus, the BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus,to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection,

restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: SFDR: Sustainability-related disclosures - BNP Paribas

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives

Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

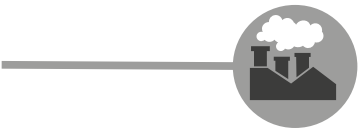

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity

14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations (SFDR: Sustainability-related disclosures - BNP Paribas)

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31.12.2025

Largest investments**	Sector	% Assets*	Country**
ASML HOLDING NV	Information Technology	3.16%	Netherlands
ROCHE HOLDING PAR AG	Health Care	2.12%	Switzerland
ASTRAZENECA PLC	Health Care	2.06%	United Kingdom
NOVARTIS AG N	Health Care	2.02%	Switzerland
HSBC HOLDINGS PLC	Financials	2.00%	United Kingdom
SAP	Information Technology	1.94%	Germany
NESTLE SA N	Consumer Staples	1.87%	Switzerland
SIEMENS N AG N	Industrials	1.62%	Germany
SHELL PLC	Energy	1.41%	United Kingdom
LVMH	Consumer Discretionary	1.38%	France
ALLIANZ	Financials	1.36%	Germany
BANCO SANTANDER SA	Financials	1.32%	Spain
NOVO NORDISK CLASS B B	Health Care	1.20%	Denmark
SCHNEIDER ELECTRIC	Industrials	1.17%	France
UBS GROUP AG	Financials	1.11%	Switzerland

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

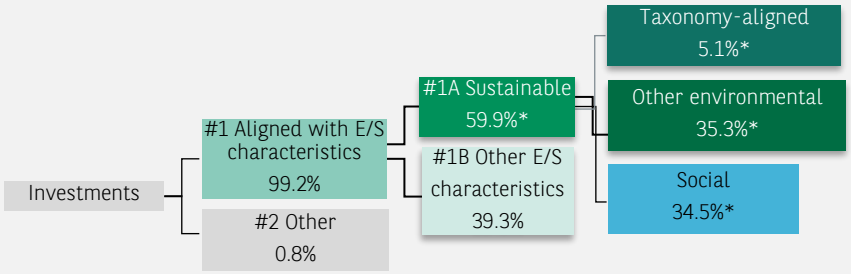

Asset allocation describes the share of investments in specific assets.

What was the asset allocation ?

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 99.2%.

The proportion of sustainable investments of the financial product is 59.9%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

- *In which economic sectors where the investments made ?*

Sectors (Level 2)	% Asset
Capital Goods	15.27%
Banks	14.57%

Consumer Staples Distribution & Retail	0.85%
Equity Real Estate Investment Trusts (REITs)	0.62%
Real Estate Management & Development	0.49%
Cash	0.11%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?

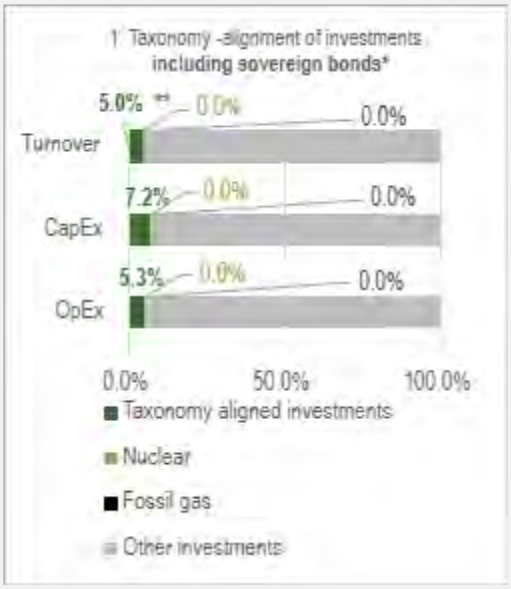

☐ Yes:

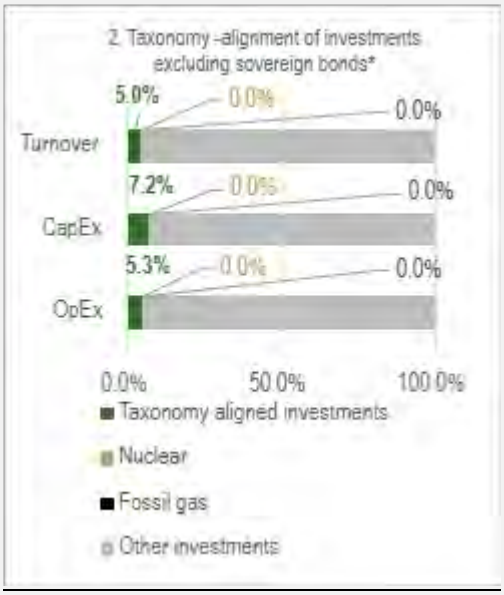

☐ In fossil gas ☐ In nuclear energy

☒ No:

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2022*	3.3%	/	/
2023**	3.6%	/	/
2024***	4.6%	7.5%	5.4%
2025***	5.0%	7.2%	5.3%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quarterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM.

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the level of data at the disposal of the management company at the time.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **35.3%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **34.5%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product shall comply with the reference benchmark business involvement and controversies exclusion criteria.

- The financial product shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.

- The financial shall have a weighted average ESG score better than the weighted average ESG score of its investment universe

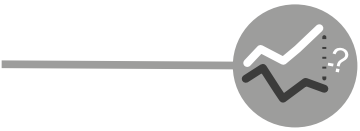

- The financial shall have an average GHG intensity at least 20% lower than the average GHG intensity of its investment universe

- The financial product shall invest at least 40% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What were the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments

contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

The MSCI Europe Select Filtered Min TE (EUR) NR Index (Bloomberg: MXJPEFMT index) has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

The methodology used for the calculation of the reference benchmark can be found at: www.msci.com.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*".

How did this financial product perform compared with the reference benchmark?

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

How did this financial product perform compared with the broad market index?

	ESG score[1]
Financial product	62.9
Broad market index[2]	61.2

(1) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(2) MSCI Europe (EUR) NR

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY MSCI Europe Small Caps SRI PAB **Legal Entity Identifier:** 213800AC6NMHI6C8P996

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **48.3%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It made **sustainable investments with a social objective** : ___%

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but noct limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases, treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by external data providers.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable, in collaboration with BNP Paribas Asset Management's Sustainability Centre.

The MSCI World SRI S-Series PAB 5% Capped (NTR) index (Bloomberg: M1CXWSC index) has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The weightings of the Environmental (E), Social (S) and Governance (G) criteria in MSCI's proprietary ESG rating methodology may vary by sector, with some having weightings below 20%. Investors may find details on MSCI's ESG Rating Methodology Document via the following link: https://support.msci.com/support/emea-esg-and-climate-labels/explanation-of-esg-pillar/04461552866 - MSCI after creating an account.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

The following sustainability indicators are used to measure the attainment of the sustainable investment objective of the financial product, and are based on the reference benchmark ESG methodology:

- The percentage of the financial product's portfolio compliant with the the reference benchmark business involvement and controversial exclusion criteria: **100%**

- The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology: **100%**

- The minimum percentage of the financial product's investment universe reduction by sector due to exclusion of securities with low ESG score and/or sector exclusions and/or any other extra financial criteria: **20%**

- The average carbon footprint of the financial product's portfolio compared to the average carbon footprint of its investment universe: **14.1 vs 102.2 tCO2eq/million € of asset value (MSCI Europe Small Caps (EUR) NR)**

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **48.3%**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

...and compared to previous periods ?

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's portfolio compliant with the the reference benchmark business involvement and controversial exclusion criteria	100%	100%	100%	100%	In line with the financial product's commitment
The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology	100%	100%	100%	100%	In line with the financial product's commitment
The minimum percentage of the financial product's investment universe reduction by sector due to exclusion of securities with low ESG score and/or sector exclusions and/or any other extra financial criteria	/	/	/	20.0%	In line with the financial product's commitment

The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation	42.8%	48,8%	49.2%	48.3%	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025are expressed as a quarterly weighted average based on the AUM

Source: BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

- ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The investment manager is using, as of the date of the prospectus, the BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus,to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
13. Board gender diversity

14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations SFDR: Sustainability-related disclosures - BNP Paribas

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31.12.2025

Largest investments**	Sector	% Assets*	Country**
BAWAG GROUP AG	Financials	2.86%	Austria
PSP SWISS PROPERTY AG N	Real Estate	2.34%	Switzerland
DIPLOMA PLC	Industrials	2.32%	United Kingdom
GALENICA AG	Health Care	2.23%	Switzerland
STOREBRAND	Financials	2.05%	Norway
SPAREBANK SR-NORGE	Financials	1.99%	Norway
MOBIMO HOLDING AG	Real Estate	1.93%	Switzerland
KONECRANES A	Industrials	1.85%	Finland
HILL AND SMITH PLC	Materials	1.72%	United Kingdom
OSTERREICHISCHE POST AG	Industrials	1.64%	Austria
HOWDEN JOINERY GROUP PLC	Industrials	1.60%	United Kingdom
ALLREAL HOLDING AG N	Real Estate	1.53%	Switzerland
FAGRON NV	Health Care	1.52%	Belgium
ICG PLC	Financials	1.50%	United Kingdom
AEDIFICA NV REIT	Real Estate	1.43%	Belgium

Source of data: BNP Paribas Asset Management,calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

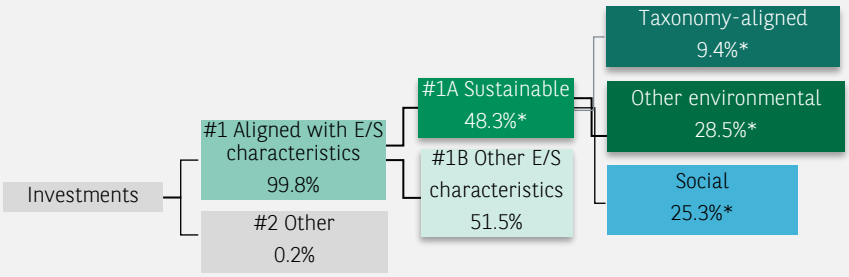

Asset allocation describes the share of investments in specific assets.

What was the asset allocation ?

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 99.8%.

The proportion of sustainable investments of the financial product is 48.3%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

- *In which economic sectors were the investments made ?*

Sectors (Level2)	% Asset
Capital Goods	14.74%
Real Estate Management & Development	8.56%
Financial Services	8.04%
Health Care Equipment & Services	6.72%
Banks	6.15%
Transportation	5.46%
Consumer Durables & Apparel	5.08%
Insurance	5.00%
Software & Services	4.56%
Materials	3.95%
Technology Hardware & Equipment	3.87%

Semiconductors & Semiconductor Equipment	0.94%
Telecommunication Services	0.83%
Consumer Staples Distribution & Retail	0.56%
Cash	0.23%
Household & Personal Products	0.20%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

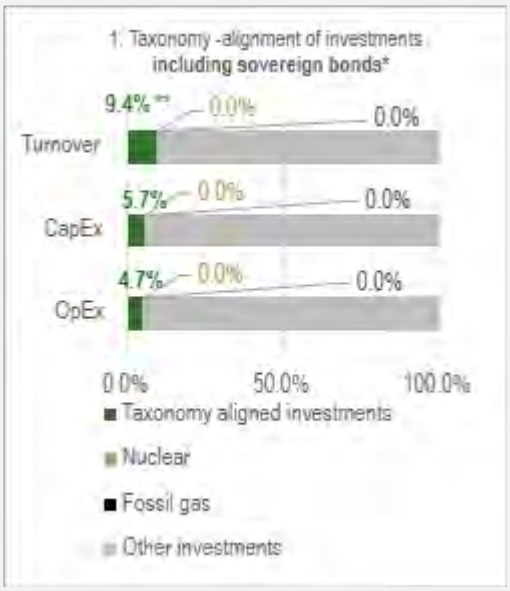

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?

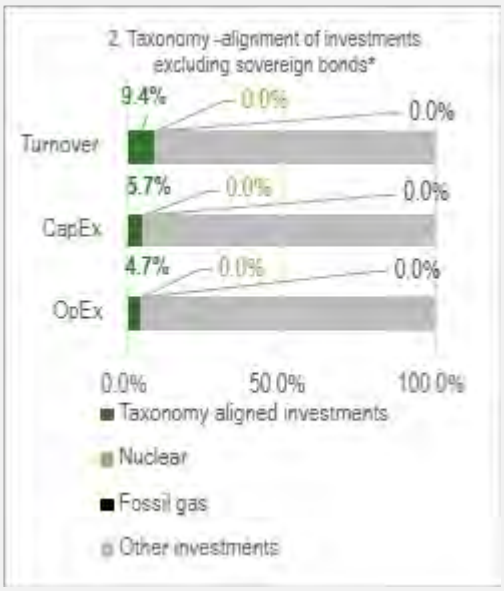

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No:

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2022*	0.0%	/	/
2023**	5.4%	/	/
2024***	10.8%	7.0%	5.8%
2025***	9.4%	5.7%	4.7%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the current level of data at the disposal of the management company at the time.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **28.5%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **25.3%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product excludes companies violating international norms, exposed to tobacco or controversial weapons, as well as companies active in sectors with possible negative impacts on the climate in accordance with the exclusion criteria defined in the Article 12. 1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission. The details on how the exclusions are applied, depending on the asset classes, are available on our website (https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ section « PAB exclusions for ESMA Guidelines »).

- The financial product complies, as part of its investment policy, with the list of exclusion criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ . As the financial product is a passively-managed ETF, the implementation of exclusions depends on the index provider's own ESG data and methodology

- The GHG intensity of the investee companies in portfolio is lower than that of the extra-financial investment universe (PAI 3).

- The portfolio's board gender diversity ratio is higher than that of the extra-financial investment universe (PAI 13)

- The financial product shall comply with the reference benchmark business involvement and controversies exclusion criteria.

- The financial product shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.

- The financial product aims to include the securities with the highest ESG ratings making up 25% of the market capitalization in each sector and region of the investment universe, as defined in the Prospectus.

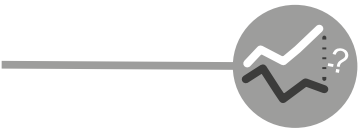

- The financial product shall have the weighted average carbon footprint of its investment strategy portfolio at least 50% lower than the weighted average carbon footprint of its investment universe.

- The financial product investment strategy portfolio shall achieve an annual decarbonisation target of at least 7%..

- The financial product shall invest at least 30% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

  There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

The MSCI Europe Small Cap SRI S-Series PAB 5% Capped (NTR) index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: www.msci.com.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*".

How did this financial product perform compared with the reference benchmark?

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

How did this financial product perform compared with the broad market index?

	GHG emissions[1]	ESG score[2]
Financial product	31.4	57.5
Broad market index[3]	125.7	55.7

(1) GHG emissions is calculated as the sum, for each GHG emissions of the investee company's (for the relevant scope), weighted by the ratio of the current value of the investment to the investee company's entreprise value.

(2) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) MSCI Europe Small Caps (EUR) NR

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY MSCI EUROPE SRI PAB **Legal Entity Identifier: 213800UNKEY76CWOI161**

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective**: ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective** : ___%

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **63.3%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but noct limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases, treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by external data providers.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

The MSCI Europe SRI S-Series Select PAB 5% Capped (NTR) index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product

The weightings of the Environmental (E), Social (S) and Governance (G) criteria in MSCI's proprietary ESG rating methodology may vary by sector, with some having weightings below 20%. Investors may find details on MSCI's ESG Rating Methodology Document via the following link: https://support.msci.com/support/emea-esg-and-climate-labels/explanation-of-esg-pillar/04461552866 - MSCI after creating an account.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The percentage of the financial product's portfolio compliant with the reference benchmark business involvement and controversies exclusion criteria: **100%**
- The percentage of the financial product's economic exposure covered by the ESG analysis based on the index provider ESG methodology: **100%**
- The minimum percentage of the financial product's investment universe reduction by sector due to exclusion of securities with low ESG score and/or sector exclusions and/or any other extra financial criteria;**20%**
- The percentage of the financial product's economic exposure invested in "sustainable investments" as defined in Article 2 (17) of SFDR: **63.3%**

...and compared to previous periods ?

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's portfolio compliant with the reference benchmark business involvement and controversies exclusion criteria	100%	100%	100%	100%	In line with the financial product's commitment
The percentage of the financial product's economic exposure covered by the ESG analysis based on the index provider ESG methodology	100%	100%	100%	100%	In line with the financial product's commitment
The minimum percentage of the financial product's investment universe reduction by sector due to exclusion of securities with low ESG score and/or sector exclusions and/or any other extra financial criteria;	/	/	/	20%	In line with the financial product's commitment

The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation	64.4%	65.5%	65.2%	63.3%	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The investment manager is using, as of the date of the prospectus, the BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus,to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A

company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector

5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

- *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

  The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure

statement: sustainability risk integration and Principal Adverse Impacts considerations SFDR: Sustainability-related disclosures - BNP Paribas

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: on 31.12.2025

Largest investments**	Sector	% Assets*	Country**
ASML HOLDING NV	Information Technology	4.47%	Netherlands
ABB LTD N	Industrials	2.61%	Switzerland
AXA SA	Financials	2.60%	France
SCHNEIDER ELECTRIC	Industrials	2.45%	France
ZURICH INSURANCE GROUP AG N	Financials	2.09%	Switzerland
LOREAL SA	Consumer Staples	1.68%	France
BANKINTER SA	Financials	1.65%	Spain
SANDVIK	Industrials	1.57%	Sweden
BEIERSDORF AG	Consumer Staples	1.57%	Germany
TERNA RETE ELETTRICA NAZIONALE	Utilities	1.56%	Italy
SEGRO REIT PLC REIT	Real Estate	1.55%	United Kingdom
SEVERN TRENT PLC	Utilities	1.49%	United Kingdom
BOLIDEN	Materials	1.44%	Sweden
GENERALI	Financials	1.35%	Italy
DEUTSCHE BOERSE AG N	Financials	1.35%	Germany

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

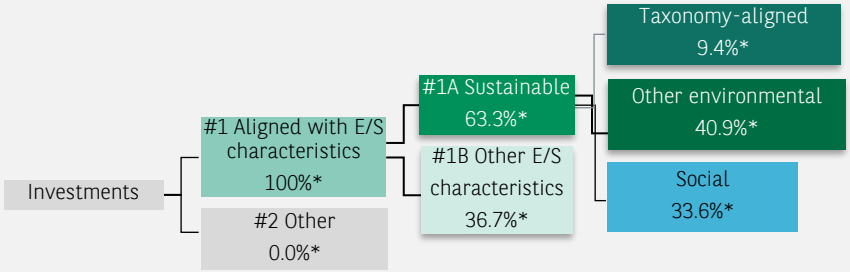

What was the asset allocation ?

Asset allocation describes the share of investments in specific assets.

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 100%.

The proportion of sustainable investments of the financial product is 63.3%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?".

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

- *In which economic sectors were the investments made ?*

Sectors (Level 2)	% Asset
Capital Goods	15.16%
Insurance	12.77%
Utilities	6.82%
Materials	6.59%
Banks	6.43%

Consumer Discretionary Distribution &	1.61%
Consumer Services	1.30%
Cash	1.27%
Real Estate Management & Development	1.08%
Transportation	1.04%
Consumer Staples Distribution & Retail	0.71%
Derivatives	0.02%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

☐ Yes:

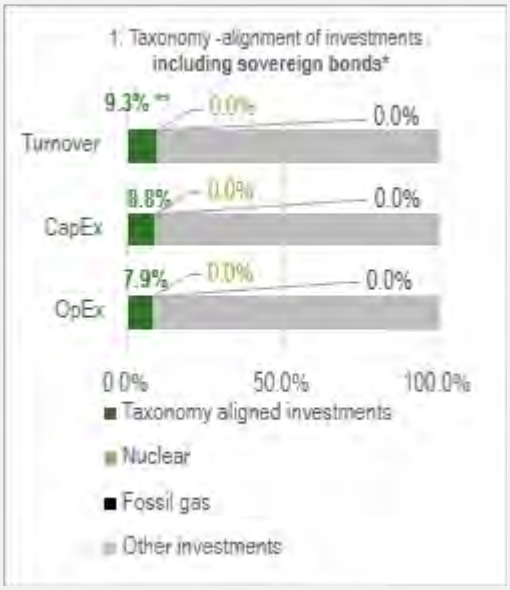

☐ In fossil gas ☐ In nuclear energy

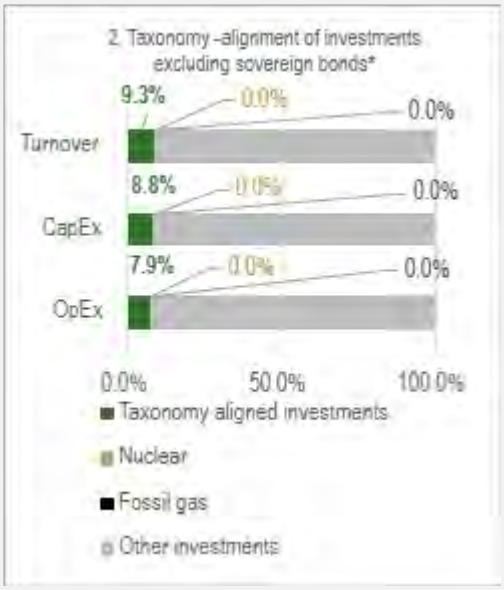

☒ No:

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

- *What was the share of investments made in transitional and enabling activities?*

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?*

	Revenue	Capex	Opex
2022*	5.7%	/	/
2023**	6.5%%	/	/
2024***	8.1%	9.9%	8.7%
2025***	9.3%	8.8%	7.9%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the current level of data at the disposal of the management company at the time.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **40.9%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **33.6%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product excludes companies violating international norms, exposed to tobacco or controversial weapons, as well as companies active in sectors with possible negative impacts on the climate in accordance with the exclusion criteria defined in the Article 12. 1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission. The details on how the exclusions are applied, depending on the asset classes, are available on our website (https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ section « PAB exclusions for ESMA Guidelines »).

- The financial product complies, as part of its investment policy, with the list of exclusion criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ . As the financial product is a passively-managed ETF, the implementation of exclusions depends on the index provider's own ESG data and methodology.

- The GHG intensity of the investee companies in portfolio is lower than that of the extra-financial investment universe (PAI 3).

- The portfolio's board gender diversity ratio is higher than that of the extra-financial investment universe (PAI 13).

- T he financial product shall comply with the reference benchmark business involvement and controversies exclusion criteria

- The financial product shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.

- The financial product aims to include the securities with the highest ESG ratings making up 25% of the market capitalization in each sector and region of the investment universe, as defined in the Prospectus.

- The financial product aims to include the securities with the highest ESG ratings making up 25% of the market capitalization in each sector and region of the investment universe, as defined in the Prospectus.

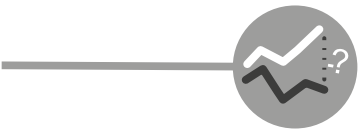

- The financial product shall have the weighted average GHG intensity of its investment strategy portfolio at least 50% lower than the weighted average GHG intensity of its investment universe

- The financial product investment strategy portfolio shall achieve an annual decarbonisation target of at least 7%.

- The financial product shall invest 45% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

The MSCI EMU SRI S-Series Select PAB 5% Capped (NTR) index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: www.msci.com.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*".

- *How did this financial product perform compared with the reference benchmark?*

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

- *How did this financial product perform compared with the broad market index?*

	GHG emissions [1,2]	ESG score[2]
Financial product	42.4	65.5
Broad market index[3]	96.2	61.2

(1) GHG emissions is calculated as the sum, for each GHG emissions of the investee company's (for the relevant scope), weighted by the ratio of the current value of the investment to the investee company's entreprise valu.

(2) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) MSCI Europe NR

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS EASY MSCI Japan Min TE **Legal Entity Identifier:** 213800I1PJ1VY5QRDU86

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective** : ___%

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **51.2%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The investment strategy selects issuers through:

A positive screening using a selectivity approach. This involves evaluation of ESG performance of an issuer against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases, treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights

A negative screening applying exclusion criteria with regard to issuers that are in violation of international norms and convention, such as the UN Nations Global Compact principles, or operate in sensitive sectors as defined by external data providers.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

The MSCI Japan Select Filtered Min TE (EUR) NR has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product, and are based on the reference benchmark ESG methodology:

- The percentage of the financial product's portfolio compliant with the the reference benchmark business involvement exclusion criteria: **100%**

- The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology: **100%**

- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus **58.2 vs 56.8 (MSCI Europe (EUR) NR)**

- The average greenhouse gas ("GHG") intentisy of the financial product's portfolio compared to the GHG intensity of its investment universe : **53.7 vs 63.4 (MSCI Europe (EUR) NR)**

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **51.2%**

- *...and compared to previous periods ?*

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's portfolio compliant with the the reference benchmark business involvement exclusion criteria	100%	100%	100%	100%	In line with the financial product's commitment
The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology	100%	100%	100%	99.8%	In line with the financial product's commitment
The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus	/	/	57 vs 54.9	58.2 vs 56.8	In line with the financial product's commitment
The average grennhouse gas ("GHG") intentisy of the financial product's portfolio compared to the GHG intensity of its investment universe	/	/	70.5	53.7 vs 63.4	In line with the financial product's commitment
The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation	52.7%	54.1%	52.7%	51.2%	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quarterly weighted average.
***Figures reported in 2024 and 2025 are expressed as a quarterly weighted based on the AUM.

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The investment manager is using, as of the date of the prospectus, the BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus,to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality,

women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives

Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity

14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations SFDR: Sustainability-related disclosures - BNP Paribas

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31.12.2025

Largest investments**	Sector	% Assets*	Country**
TOYOTA MOTOR CORP	Consumer Discretionary	4,26%	Japan
MITSUBISHI UFJ FINANCIAL GROUP	Financials	3,97%	Japan
SONY GROUP CORP	Consumer Discretionary	3,63%	Japan
HITACHI LTD	Industrials	3,24%	Japan
SUMITOMO MITSUI FIN GRP INC	Financials	2,85%	Japan
SOFTBANK GROUP CORP	Communication Services	2,40%	Japan
TOKYO ELECTRON LTD	Information Technology	2,28%	Japan
MIZUHO FINANCIAL GROUP INC	Financials	2,17%	Japan
ADVANTEST CORP	Information Technology	2,14%	Japan
ITOCHU CORP	Industrials	1,90%	Japan
RECRUIT HOLDINGS LTD	Industrials	1,88%	Japan
MITSUI LTD	Industrials	1,70%	Japan
TOKIO MARINE HOLDINGS INC	Financials	1,68%	Japan
MITSUBISHI HEAVY INDUSTRIES LTD	Industrials	1,67%	Japan
NINTENDO LTD	Communication Services	1,61%	Japan

Source of data: BNP Paribas Asset Management, calculated on 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

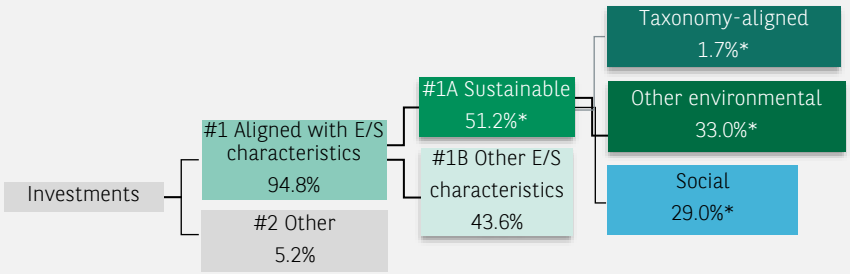

Asset allocation describes the share of investments in specific assets.

What was the asset allocation ?

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 94.8%.

The proportion of sustainable investments of the financial product is 51.2%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

- *In which economic sectors were the investments made ?*

Sectors (level 2)	% Asset
Capital Goods	19,65%
Banks	10,97%
Automobiles & Components	7,32%
Semiconductors & Semiconductor Equipment	6,09%
Consumer Durables & Apparel	5,70%
Telecommunication Services	5,40%
Technology Hardware & Equipment	5,01%
Insurance	4,85%
Pharmaceuticals Biotechnology & Life Sciences	4,67%
Transportation	3,33%
Software & Services	3,21%
Materials	2,88%
Consumer Discretionary Distribution & Retail	2,78%
Financial Services	2,72%
Media & Entertainment	2,58%
Commercial & Professional Services	2,48%
Real Estate Management & Development	2,38%
Health Care Equipment & Services	2,16%
Consumer Staples Distribution & Retail	1,56%
Food Beverage & Tobacco	1,55%
Utilities	0,68%
Household & Personal Products	0,62%
Consumer Services	0,58%

Energy	0,39%
Derivatives	0,29%
Cash	0,14%

Source of data: BNP Paribas Asset Management, calculated on 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

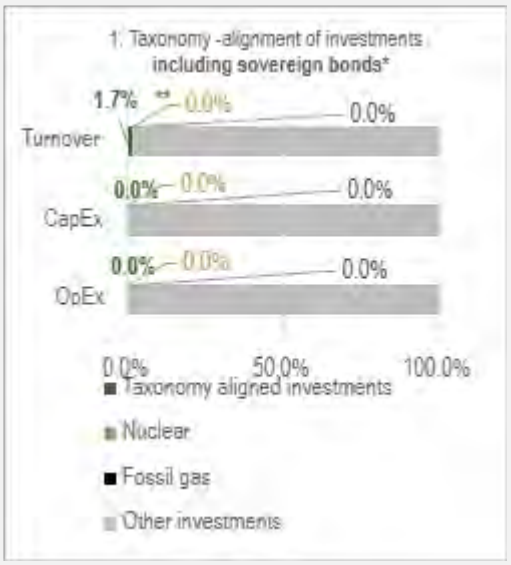

☒ No:

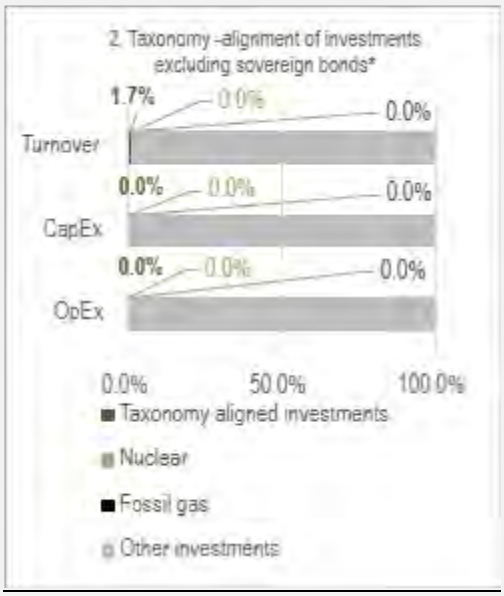

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2022*	0.1%	/	/
2023**	0.8%	/	/
2024***	1.3%	0%	0%
2025***	1.7%	0%	0%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quarterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM.

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the level of data at the disposal of the management company at the time.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **33.0%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **29.0%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product shall comply with the reference benchmark business involvement and controversies exclusion criteria.

- The financial product shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.

- The financial shall have a weighted average ESG score better than the weighted average ESG score of its investment universe

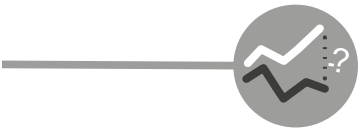

- The financial shall have an average GHG intensity at least 20% lower than the average GHG intensity of its investment universe..

- The financial product shall invest at least 40% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments

that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

The MSCI Japan Select Filtered Min TE (NTR) Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: www.msci.com.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*".

How did this financial product perform compared with the reference benchmark?

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

How did this financial product perform compared with the broad market index?

	ESG score[1]
Financial product	58.2
Broad market index[2]	56.8

(1) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(2) MSCI Japan (USD) NR

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY MSCI JAPAN SRI PAB **Legal Entity Identifier:** 213800RIR2NNTKO1FI88

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective** : ___%

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **51.6%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The investment strategy selects issuers through:

A positive screening using a selectivity approach. This involves evaluation of ESG performance of an issuer against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases, treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights

A negative screening applying exclusion criteria with regard to issuers that are in violation of international norms and convention, such as the UN Nations Global Compact principles, or operate in sensitive sectors as defined by external data providers.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

The MSCI Japan SRI S-Series PAB 5% Capped (NTR) index (Bloomberg: M7CXESE index) has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The weightings of the Environmental (E), Social (S) and Governance (G) criteria in MSCI's proprietary ESG rating methodology may vary by sector, with some having weightings below 20%. Investors may find details on MSCI's ESG Rating Methodology Document via the following link: https://support.msci.com/support/emea-esg-and-climate-labels/explanation-of-esg-pillar/04461552866 - MSCI after creating an account.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the reference benchmark business involvement and controversies exclusion criteria: **100%**
- The percentage of the financial product's economic exposure covered by the ESG analysis based on the index provider ESG methodology: **100%**
- The minimum percentage of the financial product's investment universe reduction by sector due to exclusion of securities with low ESG score and/or sector exclusions and/or any other extra financial criteria;: **20%**
- The percentage of the financial product's economic exposure invested in "sustainable investments" as defined in Article 2 (17) of SFDR: **51.6%**

...and compared to previous periods ?

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the portfolio compliant with the RBC policy	100%	100%	100%	100%	In line with the financial product's commitment
The percentage of the portfolio covered by the ESG analysis based on the ESG internal proprietary methodology	100%	100%	100%	100%	In line with the financial product's commitment
The minimum percentage of the financial product's investment universe reduction by sector due to exclusion of securities with low ESG score and/or sector exclusions and/or any other extra financial criteria;	/	/	/	20%	In line with the financial product's commitment
The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation	61.3%	60.7%	53.4%	51.6%	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.

*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation.

More information on the internal methodology can be found on the website of the investment manager: SFDR: Sustainability-related disclosures - BNP Paribas

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: https://docfinder.bnpparibas-am.com/api/files/874ADAE2-3EE7-4AD4-B0ED-84FC06E090BF

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of

international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations (SFDR: Sustainability-related disclosures - BNP Paribas)

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31.12.2025

Largest investments**	Sector	% Assets*	Country**
TOKYO ELECTRON LTD	Information Technology	6.77%	Japan
FANUC CORP	Industrials	6.33%	Japan
SUMITOMO MITSUI FIN GRP INC	Financials	5.81%	Japan
MITSUBISHI ESTATE LTD	Real Estate	5.75%	Japan
DAIWA SECURITIES GROUP INC	Financials	5.14%	Japan
NITTO DENKO CORP	Materials	4.97%	Japan
SEKISUI HOUSE LTD	Consumer Discretionary	4.88%	Japan
SONY GROUP CORP	Consumer Discretionary	4.64%	Japan
TOKIO MARINE HOLDINGS INC	Financials	4.19%	Japan
DAIICHI SANKYO LTD	Health Care	4.03%	Japan
SOFTBANK CORP	Communication Services	3.55%	Japan
JAPAN EXCHANGE GROUP INC	Financials	3.22%	Japan
RECRUIT HOLDINGS LTD	Industrials	3.17%	Japan
JAPANESE YEN	Cash	3.16%	Japan
HANKYU HANSHIN HOLDINGS INC	Industrials	2.66%	Japan

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

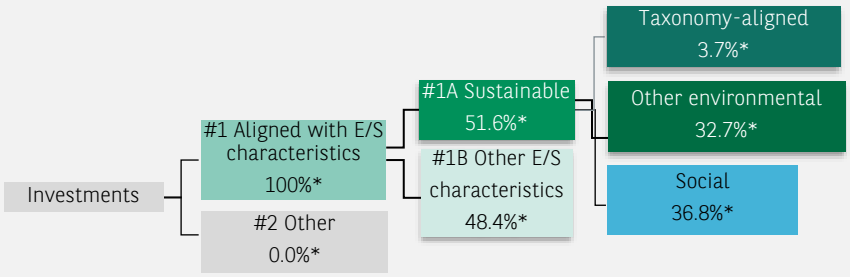

Asset allocation describes the share of investments in specific assets.

What was the asset allocation ?

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 100%.

The proportion of sustainable investments of the financial product is 51.6%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

- *In which economic sectors were the investments made ?*

Sectors (Level 2)	% Asset
Consumer Durables & Apparel	11.02%
Financial Services	8.36%
Capital Goods	8.32%
Real Estate Management & Development	7.97%
Transportation	7.92%
Insurance	7.06%
Banks	6.88%
Semiconductors & Semiconductor Equipment	6.77%
Telecommunication Services	6.00%
Household & Personal Products	5.46%
Materials	4.97%
Pharmaceuticals Biotechnology & Life Sciences	4.03%
Consumer Discretionary Distribution & Retail	4.00%
Commercial & Professional Services	3.87%
Software & Services	2.68%
Food Beverage & Tobacco	2.14%
Consumer Staples Distribution & Retail	1.91%
Media & Entertainment	0.56%
Cash	0.09%

Source of data: BNP Paribas Asset Management, calculated on the 31/2/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

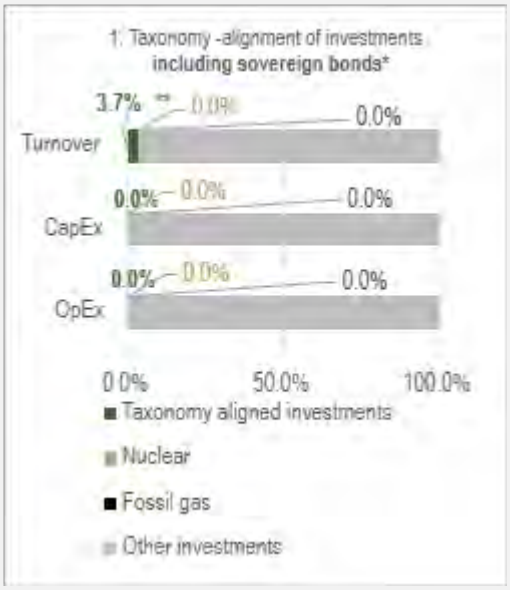

☒ No:

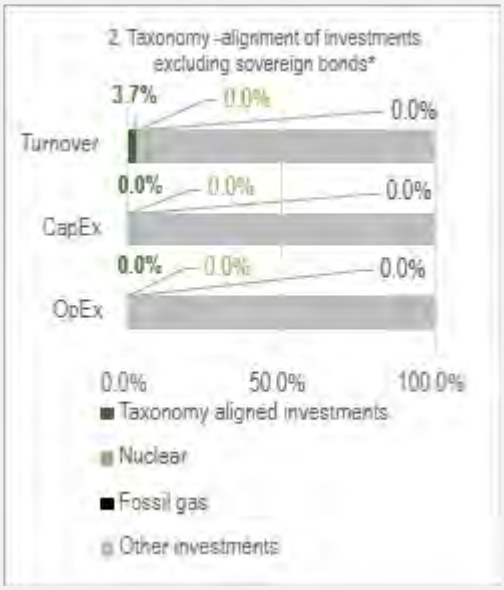

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2022*	0.3%	/	/
2023**	0.4%	/	/
2024***	0.8%	0.0%	0.0%
2025***	3.7%	0.0%	0.0%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the current level of data at the disposal of the management company at the time.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **32.7%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **36.8%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product excludes companies violating international norms, exposed to tobacco or controversial weapons, as well as companies active in sectors with possible negative impacts on the climate in accordance with the exclusion criteria defined in the Article 12. 1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission. The details on how the exclusions are applied, depending on the asset classes, are available on our website (https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ section « PAB exclusions for ESMA Guidelines »).

- The financial product complies, as part of its investment policy, with the list of exclusion criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https//docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/. As the financial product is a passively-managed ETF, the implementation of exclusions depends on the index provider's own ESG data and methodology.

- The GHG intensity of the investee companies in portfolio is lower than that of the extra-financial investment universe (PAI 3).

- The portfolio's board gender diversity ratio is higher than that of the extra-financial investment universe (PAI 13).

- The financial product shall comply with the reference benchmark business involvement and controversies exclusion criteria.

- The financial product shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology

- The financial product aims to include the securities with the highest ESG ratings making up 25% of the market capitalization in each sector and region of the investment universe, as defined in the Prospectus.

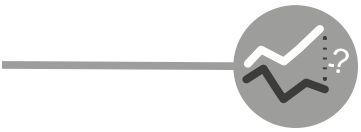

- The financial product shall have the weighted average GHG intesity of its investment strategy portfolio at least 50% lower than the weighted average GHG intesity of its investment universe.

- The financial product investment strategy portfolio shall achieve an annual decarbonisation target of at least 7%.

- The financial product shall invest 35% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

  There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

  In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

The MSCI Japan SRI S-Series Select PAB 5% Capped (NTR) index (Bloomberg: M7CXESE index) has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: www.msci.com.

- *How does the reference benchmark differ from a broad market index?*

  The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

  Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with

  regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*"

How did this financial product perform compared with the reference benchmark?

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

How did this financial product perform compared with the broad market index?

	GHG emissions [1,2]	ESG score[2]
Financial product	38.7	62.8
Broad market index[3]	64.21	56.6

(1) GHG emissions is calculated as the sum, for each GHG emissions of the investee company's (for the relevant scope), weighted by the ratio of the current value of the investment to the investee company's entreprise value.

(2) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) MSCI Japan (USD) NR

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY MSCI Pacific ex Japan Min TE **Legal Entity Identifier:** 213800LLO65K4I3C5A26

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective** : ___%

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **28.8%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile compared to its investment universe:

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but noct limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases, treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by external data providers.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable, in collaboration with BNP Paribas Asset Management's Sustainability Centre.

The MSCI Pacific ex Japan ESG Filtered Min TE (EUR) Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product, and are based on the reference benchmark ESG methodology:

- The percentage of the financial product's portfolio compliant with the the reference benchmark business involvement exclusion criteria: **100%**

- The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology: **100%**

- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe: **62.4 vs 60.1** (MSCI Pacific ex-Japan (USD) NR)

- The average grennhouse gas ("GHG") intentisy of the financial product's portfolio compared to the GHG intensity of its investment universe: **293.2 vs 450.2 (MSCI Pacific ex-Japan (USD) NR)**

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **28.8%**

...and compared to previous periods ?

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's portfolio compliant with the the reference benchmark business involvement exclusion criteria	100%	100%	100%	100%	In line with the financial product's commitment
The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology	100%	100%	100%	100%	In line with the financial product's commitment
The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe	N/A	N/A	63.9 vs 60.1	62.4 vs 60.1	In line with the financial product's commitment
The average grennhouse gas ("GHG") intentisy of the financial product's portfolio compared to the GHG intensity of its investment universe	N/A	N/A	67.4 vs 91.6	293.2 vs 450.2	In line with the financial product's commitment
The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation	30.8%	32.1%	29.2%	28.8%	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The investment manager is using, as of the date of the prospectus, the BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus,to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas

8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations SFDR: Sustainability-related disclosures - BNP Paribas

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31.12.2025

Largest investments**	Sector	% Assets*	Country**
COMMONWEALTH BANK OF AUSTRALIA	Financials	8,63%	Australia
BHP GROUP LTD	Materials	6,84%	Australia
AIA GROUP LTD	Financials	5,30%	Hong Kong
DBS GROUP HOLDINGS LTD	Financials	4,45%	Singapore
WESTPAC BANKING CORPORATION CORP	Financials	4,31%	Australia
NATIONAL AUSTRALIA BANK LTD	Financials	4,11%	Australia
ANZ GROUP HOLDINGS LTD	Financials	3,45%	Australia
HONG KONG EXCHANGES AND CLEARING	Financials	3,26%	Hong Kong
WESFARMERS LTD	Consumer Discretionary	2,84%	Australia
OVERSEA-CHINESE BANKING LTD	Financials	2,77%	Singapore

Source of data: BNP Paribas Asset Management, calculated on 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

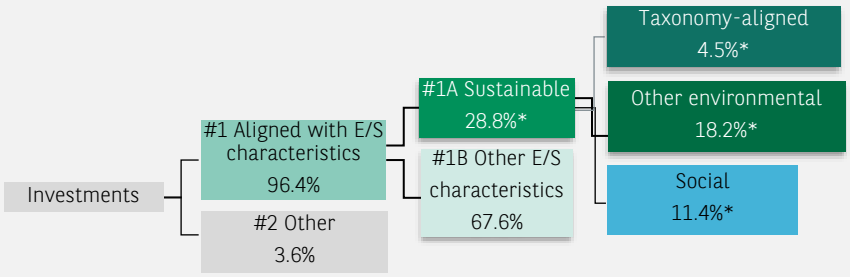

What was the asset allocation ?

Asset allocation describes the share of investments in specific assets.

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 96.4%.

The proportion of sustainable investments of the financial product is 28.8%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

- *In which economic sectors were the investments made ?*

Sectors (level 2)	% Asset
Banks	31,51%
Materials	11,43%
Insurance	8,39%
Financial Services	7,95%

Health Care Equipment & Services	2,54%
Telecommunication Services	1,91%
Commercial & Professional Services	1,91%
Consumer Staples Distribution & Retail	1,73%
Energy	1,45%
Software & Services	1,23%
Media & Entertainment	0,96%
Cash	0,85%
Food Beverage & Tobacco	0,35%

Source of data: BNP Paribas Asset Management, calculated on 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

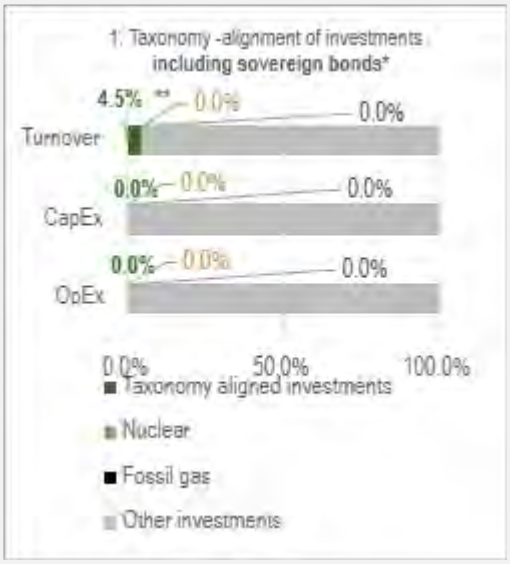

☒ No:

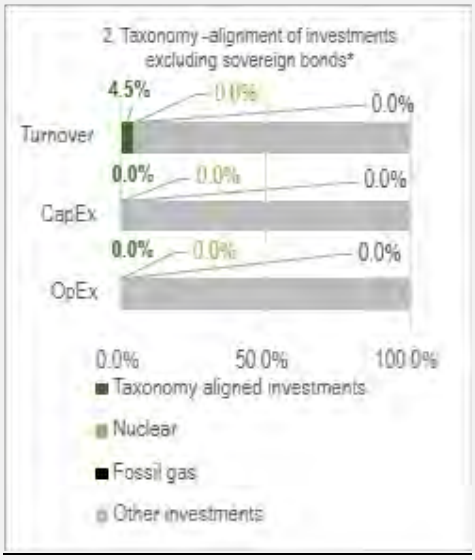

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2022*	1.8%	/	/
2023**	2.5%	/	/
2024***	2.7%	0%	0%
2025***	4.5%	0%	0%

Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the current level of data at the disposal of the management company at the time.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **18.2%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **11.4%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product shall comply with the reference benchmark business involvement and controversies exclusion criteria.

- The financial product shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.

- The financial shall have a weighted average ESG score better than the weighted average ESG score of its investment universe.

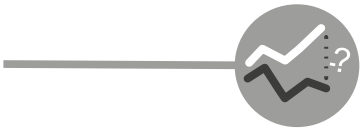

- The financial shall have an average GHG intensity at least 20% lower than the average GHG intensity of its investment universe.

- The financial product shall invest at least 20% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments

contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

The MSCI Pacific ex Japan ESG Filtered Min TE (NTR) Index (Bloomberg: MXJPEFMT index) has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

The methodology used for the calculation of the reference benchmark can be found at: www.msci.com.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*".

How did this financial product perform compared with the reference benchmark?

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

How did this financial product perform compared with the broad market index?

	GHG emissions [1,2]	ESG score[2]
Financial product	293.2	62.4
Broad market index[3]	450.2	60.1

(1) GHG emissions is calculated as the sum, for each GHG emissions of the investee company's (for the relevant scope), weighted by the ratio of the current value of the investment to the investee company's entreprise value. The ghg is expressed in tons of CO2 equivalent per million euros of entreprise value

(2) Source: BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) MSCI Pacific ex-Japan (USD) NR

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY MSCI USA Min TE **Legal Entity Identifier:** 213800AUR7GUUPS3H625

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective** : ___%

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **41.1%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but not limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases, treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms andconvention, or operate in sensitive sectors as defined by external data providers.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

The MSCI USA Select Filtered Min TE (EUR) NR has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product, and are based on the reference benchmark ESG methodology:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- The percentage of the financial product's portfolio compliant with the the reference benchmark business involvement exclusion criteria: **100%**

- The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology: **99.7%**

- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus **55.0 vs 52.9 (MSCI USA (EUR) NR)**

- The average greenhouse gas ("GHG") intentisy of the financial product's portfolio compared to the GHG intensity of its investment universe : **77.2 vs 108.4**

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **41.1%**

...and compared to previous periods ?

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's portfolio compliant with the the reference benchmark business involvement exclusion criteria	100%	100%	100%	100%	In line with the financial product's commitment
The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology	100%	100%	100%	99.7%	In line with the financial product's commitment
The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe, as defined in the Prospectus	/	/	56.9 vs 53.0	55.0 vs 52.9	In line with the financial product's commitment
The average grennhouse gas ("GHG") intentisy of the financial product's portfolio compared to the GHG intensity of its investment universe	/	/	84.0	77.2 vs 108.4	In line with the financial product's commitment
The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation	46.7%	45.5%	44.1%	41.1%	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quarterly weighted average.
***Figures reported in 2024 and 2025 are expressed as a quarterly weighted based on the AUM.

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The investment manager is using, as of the date of the prospectus, the BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus,to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives

Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

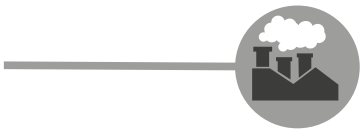

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

<u>Corporate mandatory indicators:</u>
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity

14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations SFDR: Sustainability-related disclosures - BNP Paribas

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31.12.2025

Largest investments**	Sector	% Assets*	Country**
NVIDIA CORP	Information Technology	7,60%	United States
APPLE INC	Information Technology	6,72%	United States
MICROSOFT CORP	Information Technology	5,71%	United States
AMAZON COM INC	Consumer Discretionary	3,67%	United States
ALPHABET INC CLASS A A	Communication Services	2,94%	United States
ALPHABET INC CLASS C C	Communication Services	2,63%	United States
BROADCOM INC	Information Technology	2,60%	United States
META PLATFORMS INC CLASS A A	Communication Services	2,33%	United States
TESLA INC	Consumer Discretionary	2,11%	United States
JPMORGAN CHASE	Financials	1,47%	United States
ELI LILLY	Health Care	1,45%	United States

BERKSHIRE HATHAWAY INC CLASS B B	Financials	1,05%	United States
MASTERCARD INC CLASS A A	Financials	0,83%	United States
EXXON MOBIL CORP	Energy	0,78%	United States

Source of data: BNP Paribas Asset Management, calculated on 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

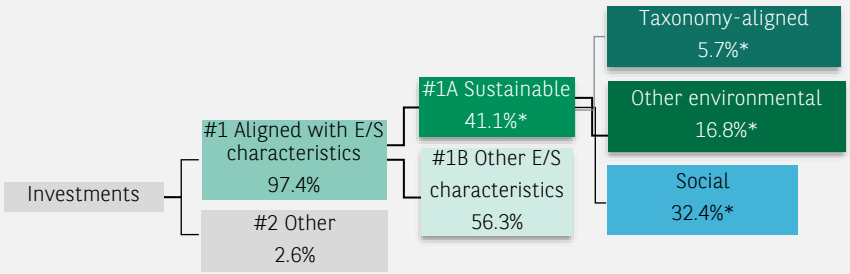

Asset allocation describes the share of investments in specific assets.

What was the asset allocation ?

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is **97.4%.**

The proportion of sustainable investments of the financial product is **41.1%.**

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

- *In which economic sectors were the investments made ?*

Sectors (level 2)	% Asset
Semiconductors & Semiconductor Equipment	14,08%
Software & Services	11,97%
Media & Entertainment	9,33%
Technology Hardware & Equipment	8,97%
Financial Services	7,83%
Pharmaceuticals Biotechnology & Life Sciences	6,22%
Capital Goods	5,91%
Consumer Discretionary Distribution & Retail	5,74%
Health Care Equipment & Services	3,72%
Banks	3,56%
Energy	2,41%
Insurance	2,40%
Automobiles & Components	2,31%
Materials	1,98%
Utilities	1,95%
Equity Real Estate Investment Trusts (REITs)	1,76%
Consumer Services	1,63%
Consumer Staples Distribution & Retail	1,60%

Transportation	1,21%
Household & Personal Products	1,20%
Telecommunication Services	0,86%

Consumer Durables & Apparel	0,40%
Real Estate Management & Development	0,18%
Cash	0,03%

Source of data: BNP Paribas Asset Management, calculated on 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

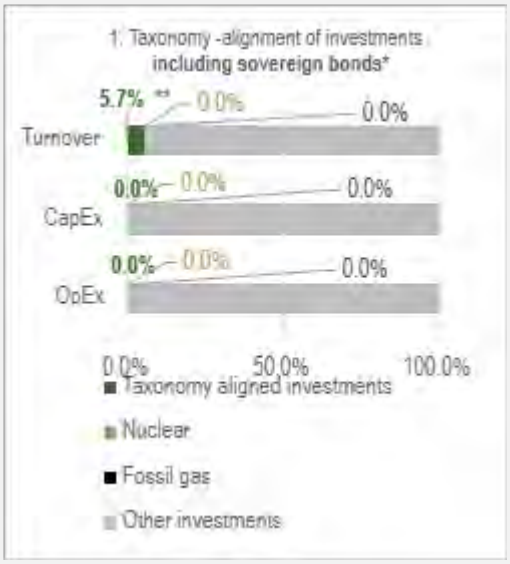

☒ No:

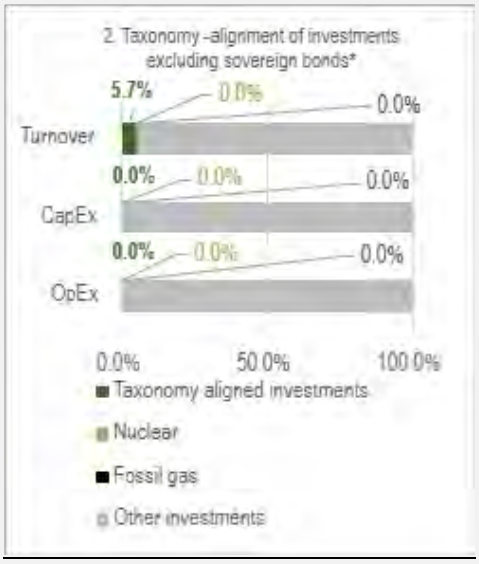

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

- *What was the share of investments made in transitional and enabling activities?*

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?*

	Revenue	Capex	Opex
2022*	1.7%	/	/
2023**	3.4%	/	/
2024***	4.5%	0%	0%
2025***	5.7%	0%	0%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quarterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM.

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the level of data at the disposal of the management company at the time.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **16.8%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **32.4%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product shall comply with the reference benchmark business involvement and controversies exclusion criteria.

- The financial product shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.

- The financial shall have a weighted average ESG score better than the weighted average ESG score of its investment universe

- The financial shall have an average GHG intensity at least 20% lower than the average GHG intensity of its investment universe..

- The financial product shall invest at least 25% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments

contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

The MSCI North America ESG Filtered Min TE (NTR) Index (Bloomberg: MXJPEFMT index) has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: www.msci.com.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*".

How did this financial product perform compared with the reference benchmark?

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

How did this financial product perform compared with the broad market index?

	GHG emisions[1,2]	ESG score[1]
Financial product	77.2	55.0
Broad market index[2]	108.4	52.9

(1) GHG emissions is calculated as the sum, for each GHG emissions of the investee company's (for the relevant scope), weighted by the ratio of the current value of the investment to the investee company's entreprise value. The ghg is expressed in tons of CO2 equivalent per million euros of entreprise value.

(2) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) MSCI North America (USD) NR

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY MSCI USA SRI PAB **Legal Entity Identifier:** 213800F4ESQPVJRVLT42

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **52.3%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It made **sustainable investments with a social objective** : ___%

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but noct limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases, treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by external data providers.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

The MSCI USA SRI S-Series PAB 5% Capped (NTR) index (Bloomberg: M1CXUSC index) has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The weightings of the Environmental (E), Social (S) and Governance (G) criteria in MSCI's proprietary ESG rating methodology may vary by sector, with some having weightings below 20%. Investors may find details on MSCI's ESG Rating Methodology Document via the following link: https://support.msci.com/support/emea-esg-and-climate-labels/explanation-of-esg pillar/04461552866 - MSCI after creating an account

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The following sustainability indicators are used to measure the attainment of the sustainable investment objective of the financial product, and are based on the reference benchmark ESG methodology:

- The percentage of the financial product's portfolio compliant with the the reference benchmark business involvement exclusion criteria: **100%**

- The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology: **100%**

- The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe: **61.2 vs 52.7 (MSCI USA (USD) NR)**

- The minimum percentage of the financial product's investment universe reduction by sector due to exclusion of securities with low ESG score and/or sector exclusions and/or any other extra financial criteria: **25%**

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **52.3%**

...and compared to previous periods ?

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's portfolio compliant with the the reference benchmark business involvement exclusion criteria	100%	100%	100%	100%	In line with the financial product's commitment
The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology	100%	100%	100%	100%	In line with the financial product's commitment
The weighted average ESG score of the financial product's portfolio compared to the weighted average ESG score of its investment universe	64.0 vs 55.0	64.1 vs 53.8	63.3 vs 51.6	61.2 vs 52.7	In line with the financial product's commitment
The minimum percentage of the financial product's investment universe reduction by sector due to exclusion of securities	/	/	/	25%	In line with the financial product's commitment

with low ESG score and/or sector exclusions and/or any other extra financial criteria					
The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation	50.2%	55.8%	55.1%	52.3%	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quarterly weighted average.
***Figures reported in 2024 and 2025 are expressed as a quarterly weighted based on the AUM.

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The investment manager is using, as of the date of the prospectus, the BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus,to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

- - - *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations SFDR: Sustainability-related disclosures - BNP Paribas

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31.12.2025

Largest investments**	Sector	% Assets*	Country**
NVIDIA CORP	Information Technology	7.97%	United States
TEXAS INSTRUMENT INC	Information Technology	4.43%	United States
ANALOG DEVICES INC	Information Technology	4.42%	United States
SERVICENOW INC	Information Technology	3.65%	United States
TESLA INC	Consumer Discretionary	3.24%	United States
INTUIT INC	Information Technology	3.05%	United States
ADOBE INC	Information Technology	2.96%	United States
BANK OF NEW YORK MELLON CORP	Financials	1.93%	United States
S&P GLOBAL INC	Financials	1.81%	United States
AMERICAN TOWER REIT CORP REIT	Real Estate	1.76%	United States
AMERICAN EXPRESS	Financials	1.70%	United States
EQUINIX REIT INC REIT	Real Estate	1.67%	United States
MOODYS CORP	Financials	1.63%	United States
MARSH INC	Financials	1.57%	United States
DANAHER CORP	Health Care	1.49%	United States

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

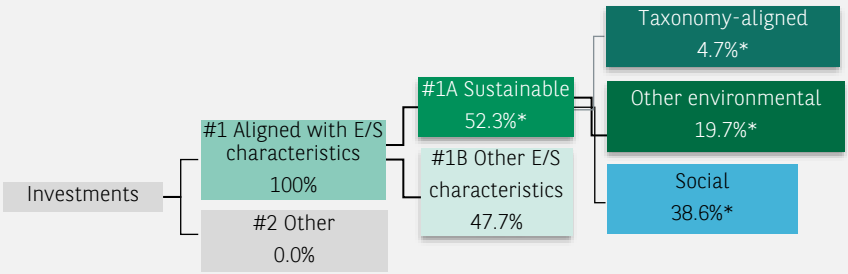

Asset allocation describes the share of investments in specific assets.

What was the asset allocation ?

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 100%.

The proportion of sustainable investments of the financial product is 52.3%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

Sectors (Level 2)	% Asset
Semiconductors & Semiconductor Equipment	19.74%
Financial Services	13.22%
Pharmaceuticals Biotechnology & Life Sciences	10.84%
Software & Services	10.30%
Equity Real Estate Investment Trusts (REITs)	6.11%
Insurance	5.83%
Capital Goods	4.96%
Health Care Equipment & Services	4.19%
Commercial & Professional Services	4.02%
Technology Hardware & Equipment	3.82%
Media & Entertainment	3.52%
Automobiles & Components	3.34%
Consumer Discretionary Distribution & Retail	2.96%
Consumer Durables & Apparel	1.80%
Household & Personal Products	1.37%
Transportation	0.99%
Telecommunication Services	0.98%
Utilities	0.85%
Consumer Services	0.36%
Banks	0.31%
Food Beverage & Tobacco	0.21%
Derivatives	0.20%
Cash	0.06%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

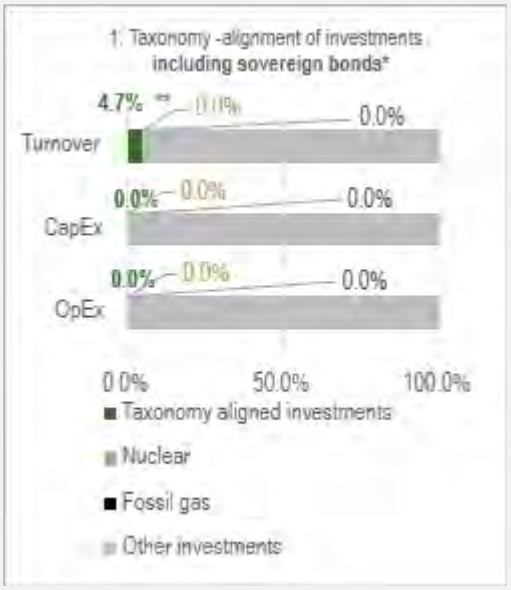

☒ No:

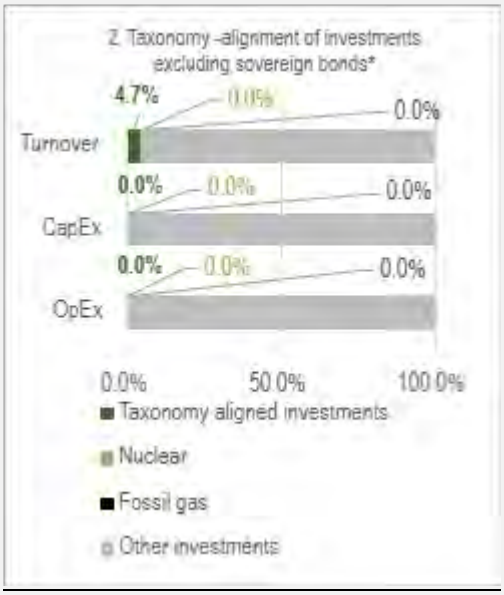

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2022*	1.6%	/	/
2023**	3.5%	/	/
2024***	2.9%	0%	0%
2025***	4.7%	0%	0%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quarterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM.

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the level of data at the disposal of the management company at the time.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **19.7%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **38.6%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product excludes companies violating international norms, exposed to tobacco or controversial weapons, as well as companies active in sectors with possible negative impacts on the climate in accordance with the exclusion criteria defined in the Article 12. 1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission. The details on how the exclusions are applied, depending on the asset classes, are available on our website (https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ section « PAB exclusions for ESMA Guidelines »).

- The financial product complies, as part of its investment policy, with the list of exclusion criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https//docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/. As the financial product is a passively-managed ETF, the implementation of exclusions depends on the index provider's own ESG data and methodology

- The GHG intensity of the investee companies in portfolio is lower than that of the extra-financial investment universe (PAI 3)

- The financial product shall have the gender board diversity ratio of it investment strategy portfolio higher than the weighted average gender board diversity ratio of its investment universe (PAI 13)

- The financial product shall comply with the reference benchmark business involvement and controversies exclusion criteria.

- The financial product shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.

- The financial product aims to include the securities with the highest ESG ratings making up 25% of the market capitalization in each sector and region of the investment universe, as defined in the Prospectus.

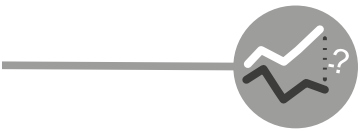

- The financial product shall have the weighted average carbon footprint of its investment strategy portfolio at least 50% lower than the weighted average carbon footprint of its investment universe.

- The financial product investment strategy portfolio shall achieve an annual decarbonisation target of at least 7%..

- The financial product shall invest at least 35% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

  There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

The MSCI USA SRI S-Series PAB 5% Capped (USD) NR index (Bloomberg: M1CXUSC index) has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: www.msci.com.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard

to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*".

- ***How did this financial product perform compared with the reference benchmark?***

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

- ***How did this financial product perform compared with the broad market index?***

	GHG emissions[1,2]	ESG score[2]
Financial product	36.8	61.2
Broad market index[3]	113.0	52.7

(1) GHG emissions is calculated as the sum, for each GHG emissions of the investee company's (for the relevant scope), weighted by the ratio of the current value of the investment to the investee company's entreprise value.

(2) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) MSCI USA (USD) NR

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY MSCI WORLD SRI PAB **Legal Entity Identifier:** 21380009N13WHRUQI558

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective** : ___%

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **55.3%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using an ESG internal proprietary methodology, and by investing in issuers that demonstrate good environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The financial product aims to improve its ESG profile compared to its investment universe.

The ESG performance of an issuer is evaluated against a combination of environmental, social and governance factors which include but noct limited to:

- Environmental: energy efficiency, reduction of emissions of greenhouse gases, treatment of waste

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity)

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights

The exclusion criteria are applied with regard to issuers that are in violation of international norms and convention, or operate in sensitive sectors as defined by external data providers.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable.

The MSCI World SRI S-Series PAB 5% Capped (NTR) index (Bloomberg: M1CXWSC index) has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The weightings of the Environmental (E), Social (S) and Governance (G) criteria in MSCI's proprietary ESG rating methodology may vary by sector, with some having weightings below 20%. Investors may find details on MSCI's ESG Rating Methodology Document via the following link: https://support.msci.com/support/emea-esg-and-climate-labels/explanation-of-esg-pillar/04461552866 - MSCI after creating an account.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The following sustainability indicators are used to measure the attainment of the sustainable investment objective of the financial product, and are based on the reference benchmark ESG methodology:

- The percentage of the financial product's portfolio compliant with the the reference benchmark business involvement exclusion criteria: **100%**

- The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology: **100%**

- The minimum percentage of the financial product's investment universe reduction by sector due to exclusion of securities with low ESG score and/or sector exclusions and/or any other extra financial criteria;**20%**

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **55.3%**

...and compared to previous periods ?

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's portfolio compliant with the the reference benchmark business involvement exclusion criteria	100%	100%	100%	100%	In line with the financial product's commitment
The percentage of the financial product's assets covered by the ESG analysis based on the index provider ESG methodology	100%	100%	100%	100%	In line with the financial product's commitment
The minimum percentage of the financial product's investment universe reduction by sector due to exclusion of securities with low ESG score and/or sector exclusions and/or any other extra financial criteria;	/	/	/	20%	In line with the financial product's commitment
The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation	55.9%	57.6%	56.8%	55.3%	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The investment manager is using, as of the date of the prospectus, the BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus,to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas

8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which BNPP AM considers principal adverseimpacts of investment decisions on sustainability factors taking due account of the size, thenature and scale of its activities and the types of financial products managed can be found in the BNPP AM SFDR disclosure statement: sustainability risk integration and Principal Adverse Impacts considerations SFDR: Sustainability-related disclosures - BNP Paribas

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31.12.2025

Largest investments**	Sector	% Assets*	Country**
NVIDIA CORP	Information Technology	5.79%	United States
ANALOG DEVICES INC	Information Technology	2.89%	United States
TESLA INC	Consumer Discretionary	2.07%	United States
TEXAS INSTRUMENT INC	Information Technology	2.01%	United States
ASML HOLDING NV	Information Technology	1.95%	Netherlands
SERVICENOW INC	Information Technology	1.55%	United States
INTUIT INC	Information Technology	1.25%	United States
ADOBE INC	Information Technology	1.18%	United States
AMERICAN EXPRESS	Financials	1.15%	United States
BANK OF NEW YORK MELLON CORP	Financials	1.03%	United States
S&P GLOBAL INC	Financials	0.93%	United States
TOKYO ELECTRON LTD	Information Technology	0.92%	Japan
SHOPIFY INC A	Information Technology	0.84%	Canada
HARTFORD INSURANCE GROUP INC	Financials	0.79%	United States
HOME DEPOT INC	Consumer Discretionary	0.78%	United States

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources.

What was the proportion of sustainability-related investments?

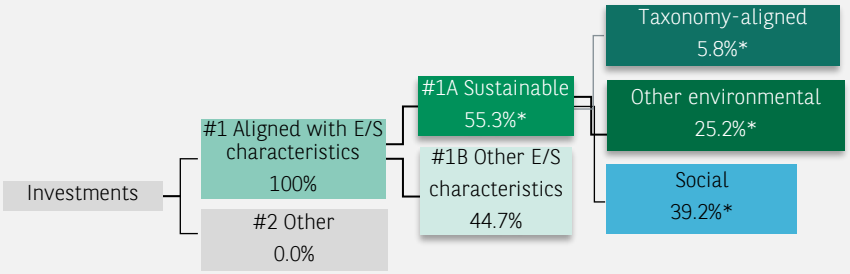

Asset allocation describes the share of investments in specific assets.

What was the asset allocation ?

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 100%.

The proportion of sustainable investments of the financial product is 55.3%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

- *In which economic sectors were the investments made ?*

Sectors (level 2)	% Asset
Semiconductors & Semiconductor Equipment	16.30%
Financial Services	9.87%
Pharmaceuticals Biotechnology & Life Sciences	8.12%
Capital Goods	7.54%
Software & Services	7.31%
Insurance	7.20%
Health Care Equipment & Services	5.00%
Banks	4.19%
Consumer Discretionary Distribution & Retail	3.80%
Technology Hardware & Equipment	3.70%
Commercial & Professional Services	3.26%
Media & Entertainment	2.97%
Equity Real Estate Investment Trusts (REITs)	2.45%
Automobiles & Components	2.22%
Consumer Durables & Apparel	2.16%
Materials	2.13%
Transportation	2.11%
Utilities	2.09%
Household & Personal Products	1.72%
Telecommunication Services	1.63%
Food Beverage & Tobacco	1.56%
Real Estate Management & Development	1.13%
Consumer Services	0.89%
Consumer Staples Distribution & Retail	0.55%
Cash	0.11%
Derivatives	0.02%

Source of data: BNP Paribas Asset Management,calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly.

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

☐ Yes:

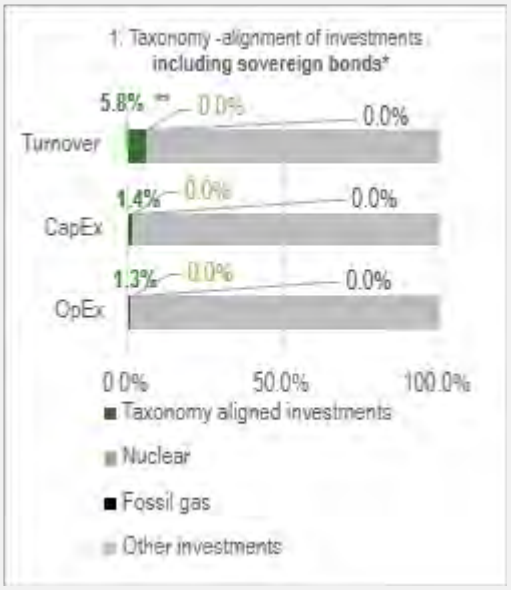

☐ In fossil gas ☐ In nuclear energy

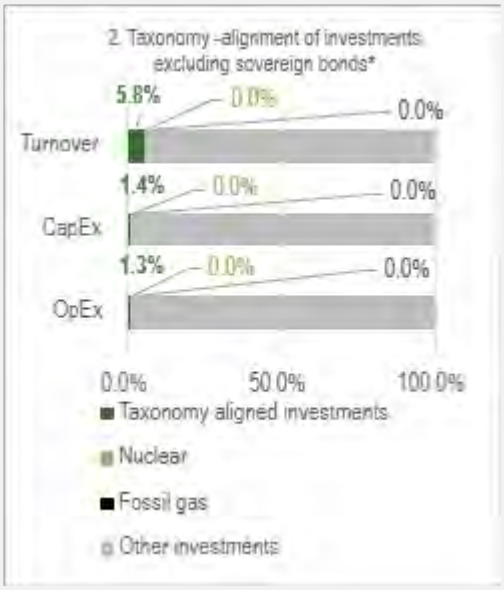

☒ No:

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

- *What was the share of investments made in transitional and enabling activities?*

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- *How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?*

	Revenue	Capex	Opex
2022*	2.4%	/	/
2023**	4.0%	/	/
2024***	4.5%	1.6%	1.4%
2025***	5.8%	1.4%	1.3%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the current level of data at the disposal of the management company at the time.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **25.2%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **39.2%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product excludes companies violating international norms, exposed to tobacco or controversial weapons, as well as companies active in sectors with possible negative impacts on the climate in accordance with the exclusion criteria defined in the Article 12. 1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission. The details on how the exclusions are applied, depending on the asset classes, are available on our website (https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ section « PAB exclusions for ESMA Guidelines »).

- -The financial product complies, as part of its investment policy, with the list of exclusion criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/. As the financial product is a passively-managed ETF, the implementation of exclusions depends on the index provider's own ESG data and methodology

- The GHG intensity of the investee companies in portfolio is lower than that of the extra-financial investment universe (PAI 3).

- The portfolio's board gender diversity ratio is higher than that of the extra-financial investment universe (PAI 13)

- The financial product shall comply with the reference benchmark business involvement and controversies exclusion criteria.

- The financial product shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.

- The financial product aims to include the securities with the highest ESG ratings making up 25% of the market capitalization in each sector and region of the investment universe, as defined in the Prospectus.

- The financial product shall have the weighted average GHG intensity of its investment strategy portfolio at least 50% lower than the weighted average GHG intensity of its investment universe

- The financial product investment strategy portfolio shall achieve an annual decarbonisation target of at least 7%..

- The financial product shall invest at least 40% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What are the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus.

  There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules.

  In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

The MSCI World SRI S-Series Select PAB 5% Capped (NTR) index (Bloomberg: M1CXWSC index) has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: www.msci.com.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*".

How did this financial product perform compared with the reference benchmark?

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

How did this financial product perform compared with the broad market index?

	GHG emissions[1,2]	ESG score[2]
Financial product	33.1	62.4
Broad market index[3]	117.7	57.5

(1) GHG emissions is calculated as the sum, for each GHG emissions of the investee company's (for the relevant scope), weighted by the ratio of the current value of the investment to the investee company's entreprise value. The ghg is expressed in tons of CO2 equivalent per million euros of entreprise value.

(2) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) MSCI World (USD) NR

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY Quality Europe **Legal Entity Identifier:** 2138009SZIFSH2QB3J69

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

☐ Yes ☒ No

☐ It made **sustainable investment with an environmental objective**: ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective** : ___%

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **61.0%** of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using ESG external and/or internal proprietary methodology(ies). As such, the product is exposed to issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The investment strategy selects issuers through:

- A positive screening using a selectivity approach. This involves evaluation of Environmental, Social, and Governance (ESG) performance of an issuer against a combination of environmental, social and governance factors which include but not limited to :
  - Environmental: energy efficiency, reduction of emissions of greenhouse gases, treatment of waste;

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity);

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights.

o A negative screening applying exclusion criteria with regard to issuers that are in violation of international norms and convention, such as the UN Nations Global Compact principles and OECD Guidelines for Multinational Enterprises, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC) policy.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights, according to the Stewardship policy, where applicable.

In synthetic replication, engagement with issuers and exercise of voting rights, if any, are only applied for the Financing Assets underlying securities.

The BNP Paribas Quality Europe ESG (NTR) index (Bloomberg: BNPIFEQE index) has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's economic exposure compliant with the RBC policy: **100%**

- The percentage of the financial product's economic exposure covered by the ESG analysis based on external and/or ESG proprietary methodology(ies): **100%**

- The minimum percentage of the financial product's economic exposure investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC policy and/or any other extra financial criteria: **20%**

- The weighted average ESG score of the financial product's economic exposure compared tothe weighted average ESG score of its investment universe: **65.5 vs 61.0 (STOXX Europe 600 (EUR) NR)*.**

- The percentage of the financial product's economic exposure in "sustainable investments" as defined in Article 2 (17) of SFDR: **61.0%**

* Source: BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

- *...and compared to previous periods ?*

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's economic exposure compliant with the RBC policy	100%	100%	100%	100%	In line with the financial product's commitment
The percentage of the financial product's economic exposure covered by the ESG analysis based on external and/or ESG proprietary methodology(ies)	100%	100%	100%	100%	In line with the financial product's commitment
The minimum percentage of the financial product's economic exposure investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC policy and/or any other extra financial criteria	20%	20%	20%	20%	In line with the financial product's commitment
The weighted average ESG score of the financial product's economic exposure compared tothe weighted average ESG score of its investment universe	65.9 vs 59.4	65.9 vs 59.4	66.9 vs 59.9	65.5 vs 61.0	In line with the financial product's commitment
The percentage of the financial product's reference benchmark economic exposure in "sustainable investments" as defined in Article 2 (17) of SFDR	64.9%	64.9%	67.4%	61.0%	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year.
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

As of the date of the annual report, the financial product applies synthetic replication. Consequently, the sustainable investments to which the financial product is exposed and described below are the ones of the underlying securities of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

In synthetic replication, engagement with issuers and exercise of voting rights, if any, are only applied for the Financing Assets underlying securities.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicators
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions :

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

In synthetic replication, engagement with issuers and exercise of voting rights, if any, are only applied for the Financing Assets underlying securities.

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector

7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy
Sovereign mandatory indicators
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

What were the top investments of this financial product?

The financial product applies synthetic replication.
The top investments disclosed below are therefore twofold:
- The assets physically held at the level of the financial product
- The assets of the reference benchmark underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

Assets physically held at the level of the financial product:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31.12.2025

Largest investments**	Sector	% Assets*	Country**
ORANGE SA	Communication Services	8,51%	France
BNP PARIBAS SA	Financials	7,72%	France
AXA SA	Financials	7,67%	France
CREDIT AGRICOLE SA	Financials	5,52%	France
BNPP MOIS ISR I C	Cash	5,31%	France
TRS RECEIVE EUR FIXED PAY FLOAT + 14BP 2026-06-23	Financials	5,17%	France
BOUYGUES SA	Industrials	4,50%	France

** Any difference with the portfolio statements above are coming from the use of different data's sources.

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

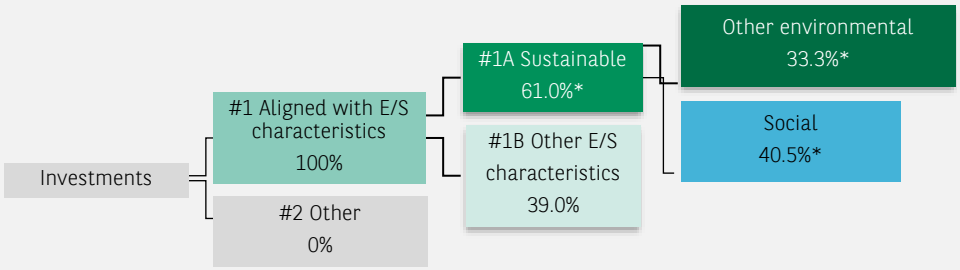

What was the asset allocation ?

As of the date of the annual report, the financial product applies synthetic replication. Consequently, the asset allocation for this financial product is the ones of the underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 100%.

The proportion of sustainable investments of the financial product is 61.0%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

The financial product applies synthetic replication.
The top investments disclosed below are therefore twofold:

- The assets physically held at the level of the financial product
- The assets of the reference benchmark underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

Assets physically held at the level of the financial product:

Sectors (level 2)	% Asset
Banks	23,99%
Capital Goods	16,01%
Insurance	14,31%
Telecommunication Services	12,05%
Automobiles & Components	10,11%
Cash	8,25%
Food Beverage & Tobacco	4,02%
Utilities	3,77%
Pharmaceuticals Biotechnology & Life Sciences	3,17%
Consumer Durables & Apparel	3,16%
Software & Services	2,29%
Real Estate Management & Development	0,04%
Financial Services	-1,18%

Source of data: BNP Paribas Asset Management, calculated on 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

Assets of the reference benchmark underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy:

Sectors	% Asset
Industrials	31,6%
Consumer Discretionary	17,7%
Financials	17,0%
Health Care	14,6%
Information Technology	11,0%
Communication Services	5,1%
Energy	2,7%
Materials	0,3%

Source of data: BNP Paribas Asset Management, calculated on 31/12/2025.
The sector breakdown is based on the underlying portfolio data of the investment strategy and is based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

The financial product did not commit to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, and it did not do so.

- ○ *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

  - ☐ Yes:
    - ☐ In fossil gas
    - ☐ In nuclear energy
  - ☒ No:

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

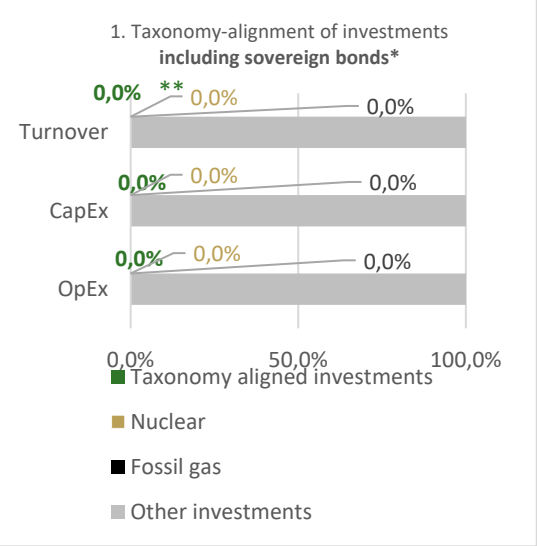

Taxonomy-aligned activities are expressed as a share of:

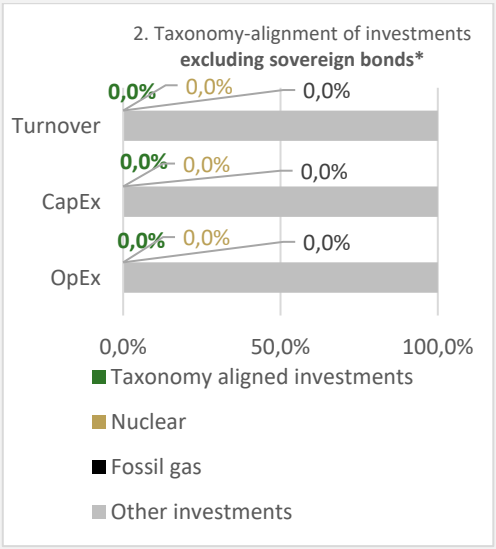

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2022*	0%	/	/
2023**	0%	/	/
2024***	0%	0%	0%
2025***	0%	0%	0%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the current level of data at the disposal of the management company at the time.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **33.3%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **40.5%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

The financial product investment strategy shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be In violation of international norms, or to cause unacceptable harm to society and/or the environment.

More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)

- The financial product investment strategy shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the proprietary and/or external ESG methodology.

- The financial product's investment universe of the investment strategy shall be reduced by a minimum of 20% due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC Policy and/or other extra-financial criteria.

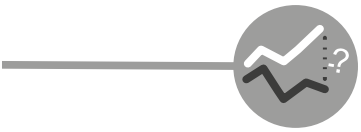

- The financial product shall have the weighted average ESG score of its investment strategy portfolio higher than the weighted average ESG score of its investment universe.

- The financial product shall have the weighted average greenhouse gas (GHG) intensity of its investment strategy portfolio lower than the weighted average greenhouse gas (GHG) intensity of its investment universe.

- The financial product shall invest at least 45% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR and as disclosed in the asset allocation below. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus

  There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance, between two strategy reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the reference benchmark administrator rules.

  In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

The BNP Paribas Quality Europe ESG (NTR) index (Bloomberg: BNPIFEQE index) has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: https://indx.bnpparibas.com/nr/FELETR.pdf

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "How did the sustainability indicators perform?"

How did this financial product perform compared with the reference benchmark?

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one

of the reference benchmark are very close.

How did this financial product perform compared with the broad market index?

	Carbon footprint (tCO2 eq/EV) 1,2	ESG score[2]
Financial product	33.5	65.5
Broad market index[3]	63.5	61.0

(1) The carbon footprint is the sum of each carbon emission divided by its simplified enterprise value, multiplied by the weight in the portfolio. Carbon emissions represent the sum of a company's scope 1 (direct emissions from installations) and scope 2 (indirect emissions linked to the company's energy consumption) emissions. Simplified enterprise value measures a total value and is calculated as the sum of market capitalization and total debt. The footprint is expressed in tons of CO2 equivalent per million euros of entreprise value

(2) Source: BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) STOXX Europe 600 (EUR) NR

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name : BNP PARIBAS EASY USD CORP BOND SRI FOSSIL FREE **Legal Entity Identifier: 213800JWEKVAMBL7QS53**

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective**: ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **33.9%** of sustainable investments

- ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It made **sustainable investments with a social objective** : ___%

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using the methodology of the index provider. As such, the product is exposed to issuers that demonstrate superior or improve environmental and social practices, while implementing robust corporate governance practices withintheir sector of activity.

The investment strategy selects issuers through:

- A negative screening applying exclusion criteria. This is applied with regard to issuers with a poor ESG profile and issuers that are in systematic violation of the UN Global Compact.

- A positive screening using a selectivity approach. This involves evaluation of Environmental, Social, and Governance (ESG) performance of an issuer against a combination of environmental, social and governance factors which include but not limited to :

- Environmental: energy efficiency, reduction of emissions of greenhouse gases (GHG), treatment of waste;

- Social: respect of human rights and workers' rights, human resources management (workers'health and safety, diversity);

- Governance: Board of Directors independence, managers'remuneration, respect of minority shareholders rights.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights according to the Stewardship policy, where applicable, in collaboration with BNP Paribas Asset Management's Sustainability Centre.

The Bloomberg MSCI US Corporate SRI Sustainable Ex Fossil Fuel Bond Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The weightings of Environmental (E), Social (S) and Governance (G) in MSCI's proprietary ESG rating methodology also used by Bloomberg indices may vary by sector, with some having weightings below 20%. Investors may find details on MSCI's ESG Rating Methodology Document via the following link: https://support.msci.com/support/emea-esg-and-climate-labels/explanation-of-esg-pillar/04461552866 - MSCI after creating an account.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's portfolio compliant with the reference benchmark eligible stock criteria taking into account sectorial and controversial policies: **100%**

- The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology: **100%**

- The minimum percentage of the financial product's investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per extra financial criteria: **30%**

- The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation: **33.9%**

...and compared to previous periods ?

Indicator	2023*	2024**	2025**	Comment
The percentage of the financial product's portfolio compliant with the reference benchmark eligible stock criteria taking into account sectorial and controversial policies	100%	100%	100%	In line with the financial product's commitment
The percentage of the financial product's portfolio covered by ESG analysis based on the ESG internal proprietary methodology	100%	100%	100%	In line with the financial product's commitment
The minimum percentage of the financial product's investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per extra financial criteria	20.0%	25.0%	30%	In line with the financial product's commitment
The percentage of the financial product's portfolio invested in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation	39.3%	37.9%	33.9%	In line with the financial product's commitment

*Figures reported in 2023 are expressed as a quaterly weighted average.
** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

The investment manager is using, as of the date of the prospectus, the BNP Paribas Asset Management (BNPP AM) internal methodology, as defined in the main part of the Prospectus,to determine sustainable investments. Such methodology integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

   a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

   b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

   a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

The proportion of investments of the financial product made in economic activities and that qualify as sustainable investments under the SFDR may contribute to the environmental objectives as defined under Taxonomy Regulation: climate change mitigation and climate change adaptation

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the sustainable investments of the financial product takes into account principal adverse impact indicators by analysing within the investment process those indicators in respect of the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS). More information on the GSS can be found on: Sustainability documents - BNPP AM Corporate English (https://www.bnpparibas-am.com/sustainability-documents/).

As regards the sustainable investments that the financial product intends to make, the following principal adverse sustainability impacts are taken into account:

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicator:
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments of the financial product exclude issuers that are in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinationa Enterprises and UN Guiding Principles on Business & Human Rights, including the principle and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors. In order for the investment manager to determine which PAI is considered and addressed or mitigated, ESG methodology and disclosures of the reference benchmark and/or the index provider are used.

The policy framework in order to analyse how principle adverse impacts are considered for the financial product mainly relies on the three following pillars:

1- Analysis of the embedded exclusion process leading the investment strategy to remove industries and behaviours that present a high risk of adverse impacts in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment;

2- How the ESG ratings used throughout the investment process include in their methodology consideration of principal adverse impacts on sustainability factors, and to what extent those ratings are used in the investment strategy;

3- Engagement and voting policy, when applicable.

The Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts. Engagement with issuers aim at encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts. Voting at Annual General Meetings of companies the portfolio is invested in aims at promoting good governance and advance environmental and social issues.

Based on the above approach, the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: SFDR: Sustainability-related disclosures - BNP Paribas

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 31.12.2025

Largest investments**	Sector	% Assets*	Country**
HSBC HOLDINGS PLC 2.87 PCT 22-NOV-2032	Financials	0.62%	United Kingdom
MORGAN STANLEY 5.16 PCT 20-APR-2029	Financials	0.55%	United States
AMAZON.COM INC 4.55 PCT 01-DEC-2027	Consumer Discretionary	0.52%	United States
LLOYDS BANKING GROUP PLC 5.72 PCT 05-JUN-2030	Financials	0.51%	United Kingdom
AT&T INC 4.35 PCT 01-MAR-2029	Communications	0.50%	United States
HCA INC 3.50 PCT 01-SEP-2030	Health Care	0.50%	United States
AMAZON.COM INC 2.10 PCT 12-MAY-2031	Consumer Discretionary	0.49%	United States
MIZUHO FINANCIAL GROUP INC 5.78 PCT 06-JUL-2029	Financials	0.48%	Japan
HOME DEPOT INC 4.95 PCT 25-JUN-2034	Consumer Discretionary	0.47%	United States

JPMORGAN CHASE & CO 5.72 PCT 14-SEP-2033	Financials	0.43%	United States

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.
* Any percentage differences with the financial statement portfolios result from a rounding difference.
** Any difference with the portfolio statements above are coming from the use of different data's sources

What was the proportion of sustainability-related investments?

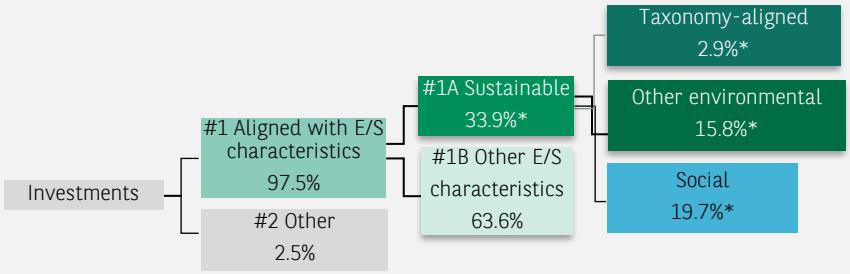

What was the asset allocation ?

Asset allocation describes the share of investments in specific assets.

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 97.5%.

The proportion of sustainable investments of the financial product is 33.9%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

Sectors	% Asset
Health Care	19.6%
Banking	17.7%
Financial Services	10.8%
Tech Hardware & Semiconductors	8.7%
Telecommunications	6.7%
Software & Tech Services	5.6%
Retail & Whsle - Discretionary	4.7%
Real Estate	4.4%
Media	3.6%
Consumer Discretionary Products	3.0%
Cash	2.4%
Consumer Staple Products	2.4%
Industrial Products	2.1%
Industrial Services	1.9%
Insurance	1.7%
Materials	1.6%
Consumer Discretionary Services	1.1%
Utilities	1.1%
Retail & Wholesale - Staples	0.8%
Derivatives	0.1%

Source of data: BNP Paribas Asset Management, calculated on the 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The financial product did not commit itself to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, but did do so.

The two graphs below illustrate, according to the data available, the extent to which sustainable investments with an environmental objective are aligned with the EU Taxonomy and contribute to the environmental objectives of climate change mitigation and adaptation.

The management company uses data from third-party providers to measure the proportion of investments that are aligned with the EU Taxonomy. Providers collect companies' self-reported alignment KPIs and may use equivalent information where these are not readily available in public disclosures. More information on BNPP AM the methodology and the providers used can be found here: https://docfinder.bnpparibas-am.com/api/files/0EE37EC2-8612-48A5-8AA1-D5C09CCB58DD

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Further updates of the prospectus and the alignment of commitments with the EU Taxonomy may be made accordingly .

Economic activities that are not recognised by the EU taxonomy are not necessarily harmful to the environment or unsustainable. Moreover, not all activities that can make a substantial contribution to environmental and social objectives are yet integrated into the EU Taxonomy.

The compliance of those investments with the requirements laid down in article 3 of Regulation (EU) 2020/852 (Taxonomy Regulation) has not been subject to an assurance provided by an auditor or review by a third party.

- ***Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?***

  - ☐ Yes:
    - ☐ In fossil gas
    - ☐ In nuclear energy
  - ☒ No:

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

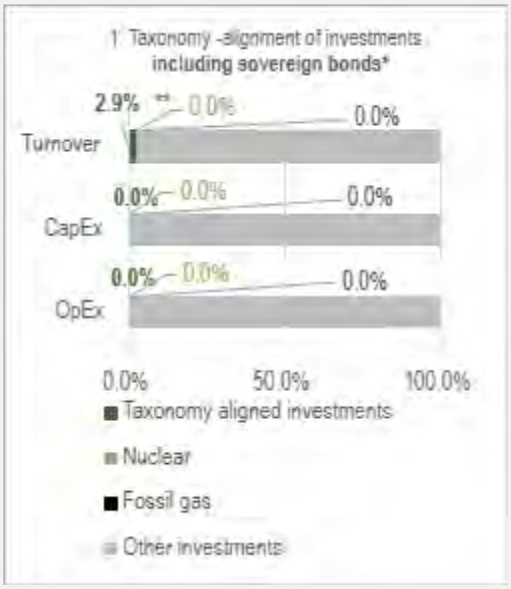

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

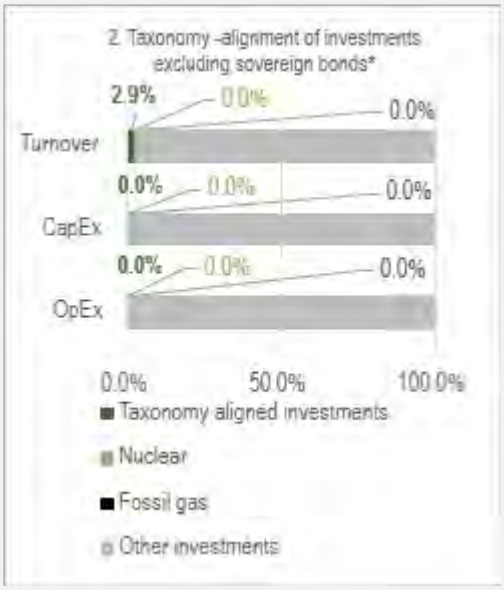

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2023*	1.8%	/	/
2024**	2.3%	0.0%	0.0%
2025**	2.9%	0.0%	0.0%

* Figures reported in 2023 are expressed as a quaterly weighted average.
** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2023 given the current level of data at the disposal of the management company at the time.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **15.8%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **19.7%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product. These assets are used for investment purposes, or

- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And

- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product excludes companies violating international norms, exposed to tobacco or controversial weapons, as well as companies active in sectors with possible negative impacts on the climate in accordance with the exclusion criteria defined in the Article 12. 1 (a-g) of (EU) delegated regulation 2020/1818 of the Commission. The details on how the exclusions are applied, depending on the asset classes, are available on our website (https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ section « PAB exclusions for ESMA Guidelines »).

-The financial product complies, as part of its investment policy, with the list of exclusion criteria dated March 2024 provided for in the SRI label reference framework. This list is accessible via the following link: https://docfinder.bnpparibas-am.com/api/files/2895a45a-bb7a-44f6-8e48-990be2616498/ . As the financial product is a passively-managed ETF, the implementation of exclusions depends on the index provider's own ESG data and methodology.

- The GHG intensity of the investee companies in portfolio is lower than that of the extra-financial investment universe (PAI 3).

- The percentage of companies of the financial product's portfolio without carbon emission reduction initiative is lower than that of its investment universe (Volontary Environmental PAI 4)

- The financial product shall comply with the eligible stock criteria by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment.

- The financial product shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the index provider methodology.

- The financial product's investment universe of the investment strategy, as defined in the Prospectus, shall be reduced by a minimum of 30% due to exclusion of securities with low ESG score and/or sector exclusions and/or other extra-financial criteria.

The financial product shall invest at least 25% of its assets in 'sustainable investments' as defined in Article 2 (17) of the SFDR regulation. Criteria to qualify an investment as 'sustainable investment' are indicated in the above question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus

There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance and not limited to, between two index reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the index provider rules

In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link Sustainability - BNPP AM Luxembourg private investor

How did this financial product perform compared to the reference benchmark?

The Bloomberg US Corporate SRI Sustainable Ex Fossil Fuel NTR Index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: www.bloombergindices.com/.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "*How did the sustainability indicators perform?*"

- *How did this financial product perform compared with the reference benchmark?*

  Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

- *How did this financial product perform compared with the broad market index?*

	GHG Emissions[1]	ESG score[2]
Financial product	47.4	58.2
Broad market index[2]	278.1	49.1

(1) GHG emissions is calculated as the sum, for each GHG emissions of the investee company's (for the relevant scope), weighted by the ratio of the current value of the investment to the investee company's entreprise value. The ghg is expressed in tons of CO2 equivalent per million euros of entreprise value.

(2) **Source:** BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

(3) Bloomberg US Corporate (USD) RI

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**.

That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name : BNP PARIBAS EASY Value Europe **Legal Entity Identifier:** 213800M8Q7157WWVTH95

ENVIRONMENTAL AND/OR SOCIAL CHARACTERISTICS

Did this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It made **sustainable investment with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective** : ___%

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **54.2%** of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise specified, all actual data, within this periodic report are expressed as a quarterly weighted average based on the AUM.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The financial product promotes environmental and social characteristics by assessing underlying investments against Environmental, Social, and Governance (ESG) criteria using ESG external and/or internal proprietary methodology(ies). As such, the product is exposed to issuers that demonstrate superior or improving environmental and social practices, while implementing robust corporate governance practices within their sector of activity.

The investment strategy selects issuers through:

- A positive screening using a selectivity approach. This involves evaluation of Environmental, Social, and Governance (ESG) performance of an issuer against a combination of environmental, social and governance factors which include but not limited to :
  - Environmental: energy efficiency, reduction of emissions of greenhouse gases, treatment of waste;

- Social: respect of human rights and workers' rights, human resources management (workers' health and safety, diversity);

- Governance: Board of Directors independence, managers' remuneration, respect of minority shareholders rights.

- A negative screening applying exclusion criteria with regard to issuers that are in violation of international norms and convention, such as the UN Nations Global Compact principles and OECD Guidelines for Multinational Enterprises, or operate in sensitive sectors as defined by the Responsible Business Conduct Policy (RBC) policy.

Furthermore, the investment manager promotes better environmental and social outcomes through engagement with issuers and the exercise of voting rights, according to the Stewardship policy, where applicable.

In synthetic replication, engagement with issuers and exercise of voting rights, if any, are only applied for the Financing Assets underlying securities.

The BNP Paribas Value Europe (EUR) NR index has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The environmental objectives as well as the social objectives to which the sustainable investments of the financial product have contributed are indicated in the question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?".

How did the sustainability indicators perform?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The following sustainability indicators are used to measure the attainment of the environmental and social characteristics promoted by the financial product:

- The percentage of the financial product's economic exposure compliant with the RBC policy: **100%**

- The percentage of the financial product's economic exposure covered by the ESG analysis based on external and/or ESG proprietary methodology(ies): **100%**

- The minimum percentage of the financial product's economic exposure investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC policy and/or any other extra financial criteria: **20%**

- The weighted average ESG score of the financial product's economic exposure compared tothe weighted average ESG score of its investment universe: **64.2 vs 60.9 (STOXX Europe 600 (EUR) NR)*.**

- The percentage of the financial product's economic exposure in "sustainable investments" as defined in Article 2 (17) of SFDR: **54.2%**

* Source: BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.

- *...and compared to previous periods ?*

Indicator	2022*	2023**	2024***	2025***	Comment
The percentage of the financial product's economic exposure compliant with the RBC policy	100%	100%	100%	100%	In line with the financial product's commitment
The percentage of the financial product's economic exposure covered by the ESG analysis based on external and/or ESG proprietary methodology(ies)	100%	100%	100%	100%	In line with the financial product's commitment
The minimum percentage of the financial product's economic exposure investment universe reduction due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC policy and/or any other extra financial criteria	20%	20%	20%	20%	In line with the financial product's commitment
The weighted average ESG score of the financial product's economic exposure compared tothe weighted average ESG score of its investment universe	66.9 vs 59.4	65.3 vs 59.4	65.0 vs 59.8	64.2 vs 60.9	In line with the financial product's commitment
The percentage of the financial product's reference benchmark economic exposure in "sustainable investments" as defined in Article 2 (17) of SFDR	61.1%	52.5%	51.3%	54.2%	In line with the financial product's commitment

*Figures reported in 2022 were calculated on the closing date of the accounting year.
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

- *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

The objectives of the sustainable investments made by the financial product are to finance companies that contribute to environmental and/or social objectives through their products and services, as well as their sustainable practices.

As of the date of the annual report, the financial product applies synthetic replication. Consequently, the sustainable investments to which the financial product is exposed and described below are the ones of the underlying securities of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

The internal methodology, as defined in the main part of the Prospectus, integrates several criteria into its definition of sustainable investments that are considered to be core components to qualify a company as sustainable. These criteria are complementary to each other. In practice, a company must meet at least one of the criteria described below in order to be considered as contributing to an environmental or social objective:

1. A company with an economic activity aligned with the EU Taxonomy objectives. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the EU Taxonomy. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: sustainable forestry, environmental restoration, sustainable manufacturing, renewable energy, water supply, sewerage, waste management and remediation, sustainable transportation, sustainable buildings, sustainable information and technology, scientific research for sustainable development;

2. A company with an economic activity contributing to one or more United Nations Sustainable Development goals (UN SDG) targets. A company can be qualified as sustainable investment in case it has more than 20% of its revenues aligned with the SDGs and less than 20% of its revenues misaligned with the UN SDGs. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: sustainable agriculture, sustainable management of water and sanitation, sustainable and modern energy, sustainable economic growth, sustainable infrastructure, sustainable cities, sustainable consumption and production patterns, fight against climate change, conservation and sustainable use of oceans, seas and marine resources, protection, restoration and sustainable use of terrestrial ecosystems, sustainable management of forests, fight against desertification, land degradation and biodiversity loss;

b. Social: no poverty, zero hunger, food security, healthy lives and well-being at all ages, inclusive and equitable quality education and lifelong learning opportunities, gender equality, women and girls empowerment, availability of water and sanitation, access to affordable, reliable and modern energy, inclusive and sustainable economic growth, full and productive employment and decent work, resilient infrastructure, inclusive and sustainable industrialization, reduced inequality, inclusive, safe and resilient cities and human settlements, peaceful and inclusive societies, access to justice and effective, accountable and inclusive institutions, global partnership for sustainable development.

3. A company operating in a high GHG emission sector that is transitioning its business model to align with the objective of maintaining the global temperature rise below 1.5°C. A company qualifying as sustainable investment through this criteria can for example contribute to the following environmental objectives: GHG emissions reduction, fight against climate change;

4. A company with best-in-class environmental or social practices compared to its peers within the relevant sector and geographical region. The E or S best performer assessment is based on the BNPP AM ESG scoring methodology. The methodology scores companies and assesses them against a peer group comprising companies in comparable sectors and geographical regions. A company with a contribution score above 10 on the Environmental or Social pillar qualifies as best performer. A company qualifying as sustainable investment through this criteria can for example contribute to the following objectives:

a. Environmental: fight against climate change, environmental risk management, sustainable management of natural resources, waste management, water management, GHG emissions reduction, renewable energy, sustainable agriculture, green infrastructure;

b. Social: health and safety, human capital management, good external stakeholder management (supply chain, contractors, data), business ethics preparedness, good corporate governance.

Green bonds, social bonds and sustainability bonds issued to support specific environmental and/or social projects are also qualified as sustainable investments provided that these debt securities receive an investment recommendation 'POSITIVE' or 'NEUTRAL' from the Sustainability Center following the issuer and underlying project assessment based on a proprietary Green/Social/Sustainability Bond Assessment methodology.

Companies identified as a sustainable investment should not significantly harm any other environmental or social objectives (the Do No Significant Harm 'DNSH' principle) and should follow good governance practices. BNP Paribas Asset Management (BNPP AM) uses its proprietary methodology to assess all companies against these requirements.

More information on the internal methodology can be found on the website of the investment manager: https://docfinder.bnpparibas-am.com/api/files/14787511-CB33-49FC-B9B5-7E934948BE63

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the product partially intends to make should not significantly harm any environmental or social objective (DNSH Principle). In this respect, the investment manager commits to consider principal adverse impacts on sustainability factors by taking into account indicators for adverse impacts as defined in SFDR, and to not invest in companies that do not meet their fundamental obligations in line with the OECD Guidelines and the UN Guiding Principles on Business and Human Rights.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

The investment manager ensures that throughout its investment process, the financial product takes into account principal adverse impact indicators that are relevant to its investment strategy to select the sustainable investments that the financial product partially intends to make by systematically implementing the sustainable investment pillars defined in the BNP Paribas Asset Management Global Sustainability Strategy (GSS) into its investment process: RBC policy, ESG integration guidelines, Stewardship, the forward-looking vision – the '3Es' (Energy transition, Environmental sustainability, Equality & Inclusive Growth).

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the "3Es" (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

In synthetic replication, engagement with issuers and exercise of voting rights, if any, are only applied for the Financing Assets underlying securities.

The financial product considers and addresses or mitigates the following principal adverse sustainability impacts indicators:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy

Sovereign mandatory indicators
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment universe of the financial product is periodically screened with a view to identify issuers that are potentially in violation or at risk of violation of the UN Global Compact Principles, OECD Guidelines for Multinational Enterprises and UN Guiding Principles on Business & Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

This assessment is conducted within the BNPP AM Sustainability Centre on the basis of internal analysis and information provided by external experts, and in consultation with BNP Paribas Group CSR Team.

If an issuer is found to be in serious and repeated violations of any of the principles, it will be placed on an 'exclusion list' and will not be available for investment. Existing investments should be divested from the portfolio according to an internal procedure. If an issuer is at risk of violating any of the principles, it is placed on a 'watch list' monitored, as appropriate.

The EU Taxonomy sets out a 'do not significant harm' principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors ?

The product considers principal adverse impacts on sustainability factors by systematically implementing the sustainable investment pillars defined in the GSS into its investment process. These pillars are covered by firm-wide policies that set criteria to identify, consider and prioritise as well as address or mitigate adverse sustainability impacts caused by issuers.

The RBC policy establishes a common framework across investments and economic activities that help identify industries and behaviours presenting a high risk of adverse impacts in violation of international norms. As part of the RBC Policy, sector policies provide a tailored approach to identify and prioritize principal adverse impacts based on the nature of the economic activity, and in many cases, the geography in which these economic activities take place.

The ESG Integration Guidelines includes a series of commitments, which are material to consideration of principal adverse sustainability impacts, and guides the internal ESG integration process. The proprietary ESG scoring framework includes an assessment of a number of adverse sustainability impacts caused by companies in which we invest. Outcome of this assessment may impact the valuation models as well as the portfolio construction depending on the severity and materiality of adverse impacts identified.

Thus, the Investment Manager considers principal adverse sustainability impacts throughout the investment process through the use of the internal ESG scores and construction of the portfolio with an improved ESG profile compared to its investment universe.

The Forward-looking perspective defines a set of objectives and developed performance indicators to measure how the researches, portfolios and commitments are aligned on three issues, the '3Es' (Energy transition, Environmental sustainability, Equality & inclusive growth) and thus support investment processes.

Furthermore, the Stewardship team regularly identifies adverse impacts through ongoing research, collaboration with other long-term investors, and dialogue with NGOs and other experts.

Actions to address or mitigate principal adverse sustainability impacts depend on the severity and materiality of these impacts. These actions are guided by the RBC Policy, ESG Integration Guidelines, and Engagement and Voting Policy which include the following provisions :

- Exclusion of issuers that are in violation of international norms and conventions and issuers that are involved in activities presenting an unacceptable risk to society and/or the environment
- Engagement with issuers with the aim of encouraging them to improve their environmental, social and governance practices and, thus, mitigate potential adverse impacts
- In case of equity holdings, voting at Annual General Meetings of companies the portfolio is invested in to promote good governance and advance environmental and social issues
- Ensuring all securities included in the portfolio have supportive ESG research
- Managing portfolios so that their aggregate ESG score is better than the relevant benchmark or universe

In synthetic replication, engagement with issuers and exercise of voting rights, if any, are only applied for the Financing Assets underlying securities.

Based on the above approach, and depending on the composition of the financial product's portfolio (i.e. the type of issuer), the financial product considers and addresses or mitigates the following principal adverse sustainability impacts:

Corporate mandatory indicators:
1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector

7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators:
Environment
4. Investments in companies without carbon emission reduction initiatives
Social
4. Lack of a supplier code of conduct
9. Lack of a human rights policy
Sovereign mandatory indicators
15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which principal adverse impacts on sustainability factors are considered can be found in the BNP PARIBAS ASSET MANAGEMENT SFDR disclosure statement: SFDR: Sustainability-related disclosures - BNP Paribas

What were the top investments of this financial product?

The financial product applies synthetic replication.
The top investments disclosed below are therefore twofold:
- The assets physically held at the level of the financial product
- The assets of the reference benchmark underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

Assets physically held at the level of the financial product:

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is on 31.12.2025

Largest investments**	Sector	% Assets*	Country**
SOCIETE GENERALE SA	Financials	9,18%	France
AXA SA	Financials	7,14%	France

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

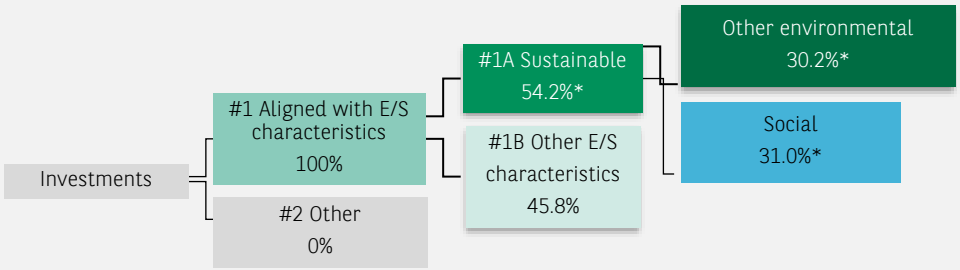

What was the asset allocation ?

As of the date of the annual report, the financial product applies synthetic replication. Consequently, the asset allocation for this financial product is the ones of the underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

The proportion of the investments of the financial product used to meet the environmental or social characteristics promoted, in accordance with the binding elements of the investment strategy of the financial product is 100%.

The proportion of sustainable investments of the financial product is 54.2%.

The remaining proportion of the investments is mainly used as described under the question: " What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?"

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

-The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

-The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

*A portfolio security classified as sustainable investment may, taking into account all its activities, both contribute to a social objective and to an environmental objective (aligned or not with the taxonomy of the EU) and the figures shown take this into account. However, the same issuer can only be recognised once for sustainable investments (#1A Sustainable).

In which economic sectors were the investments made ?

The financial product applies synthetic replication.
The top investments disclosed below are therefore twofold:

- The assets physically held at the level of the financial product
- The assets of the reference benchmark underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy.

Assets physically held at the level of the financial product:

Sectors (Level 2)	**% Asset**
Banks	26,63%
Capital Goods	21,31%
Insurance	16,69%
Pharmaceuticals Biotechnology & Life Sciences	4,89%
Semiconductors & Semiconductor Equipment	4,47%
Food Beverage & Tobacco	3,67%
Household & Personal Products	3,64%
Materials	3,49%
Utilities	3,34%
Consumer Durables & Apparel	2,86%
Automobiles & Components	2,82%
Financial Services	2,12%
Cash	1,72%

Software & Services	1,17%
Health Care Equipment & Services	0,61%
Media & Entertainment	0,57%

Source of data: BNP Paribas Asset Management, calculated on 31/12/2025.
The largest investments are based on official accounting data and are based on the transaction date.

Assets of the reference benchmark underlying portfolio of the financial derivative instruments such as Total Return Swaps (TRS) used on a continuous basis for achieving the investment policy:

Sectors	% Asset
Financials	26,8%
Industrials	17,4%
Consumer Discretionary	11,9%
Consumer Staples	8,8%
Health Care	8,8%
Communication Services	8,6%
Energy	7,3%
Utilities	4,0%
Information Technology	2,8%
Real Estate	2,3%
Materials	1,3%

Source of data: BNP Paribas Asset Management, calculated on 31/12/2025.
The sector breakdown is based on the underlying portfolio data of the investment strategy and is based on the transaction date.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

The financial product did not commit to having a minimum proportion of sustainable investments with an environmental objective in economic activities that are considered environmentally sustainable within the meaning of the EU Taxonomy, and it did not do so.

- *Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy [1]?*

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No:

[1] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

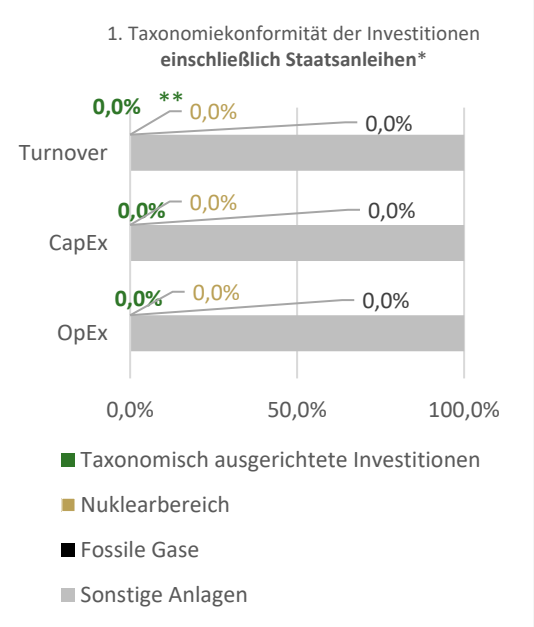

Taxonomy-aligned activities are expressed as a share of:

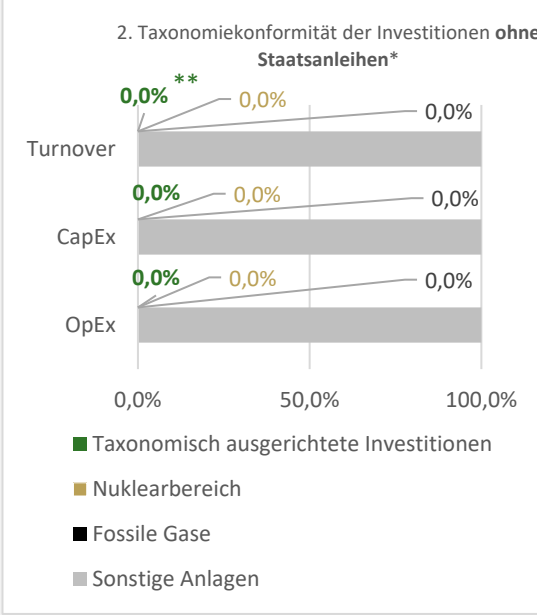

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.*

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** Real taxonomy aligned*

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the Regulations Taxonomy is 0% for transitional activities and 0% for enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?

	Revenue	Capex	Opex
2022*	0%	/	/
2023**	0%	/	/
2024***	0%	0%	0%
2025***	0%	0%	0%

*Figures reported in 2022 were calculated on the closing date of the accounting year
** Figures reported in 2023 are expressed as a quaterly weighted average.
*** Figures reported in 2024 and 2025 are expressed as a quarterly weighted average based on the AUM

The proportion of taxonomy-aligned economic activities in CapEx or OpEx are not disclosed in 2022 and 2023 given the current level of data at the disposal of the management company at the time.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that are not aligned with the European Taxonomy Regulation is **30.2%.**

The management company is improving its systems for collecting data in line with the EU Taxonomy to ensure the accuracy and adequacy of published sustainability information under the European Taxonomy Regulation. Meanwhile, the financial product will invest in sustainable investments whose environmental objective is not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

Socially sustainable investments represent **31.0%** of the financial product.

What investments were included under 'other', what was their purpose and were there any minimum environmental or social safeguards?

The remaining proportion of the investments may include :

- The proportion of assets that are not used to meet the environmental or social characteristics promoted by the financial product or
- Instruments which are mainly used for liquidity, efficient portfolio management, and/or hedging purposes, notably cash, deposits and derivatives

In any case, the investment manager will ensure that those investments are made while maintaining the improvement of the ESG profile of the financial product. In addition, those investments are made in compliance with our internal processes, including the following minimum environmental or social safeguards:

- The risk management policy. The risk management policy comprises procedures as are necessary to enable the management company to assess for each financial product it manages the exposure of that product to market, liquidity, sustainability and counterparty risks. And
- The RBC policy, where applicable, through the exclusion of companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be in violation of international norms, or to cause unacceptable harm to society and/or the environment

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

- The financial product investment strategy shall comply with the RBC Policy by excluding companies involved in controversies due to poor practices related to human and labour rights, environment, and corruption, as well as companies operating in sensitive sectors (tobacco, coal, controversial weapons, asbestos,...), as these companies are deemed to be In violation of international norms, or to cause unacceptable harm to society and/or the environment.

  More information on the RBC Policy, and in particular criteria relating to sectoral exclusions, can be found on the website of the investment manager: Sustainability documents - BNPP AM Corporate English (bnpparibas-am.com)

- The financial product investment strategy shall have at least 90% of its investment strategy underlying securities covered by the ESG analysis based on the proprietary and/or external ESG methodology.

-

- The financial product's investment universe of the investment strategy shall be reduced by a minimum of 20% due to exclusion of securities with low ESG score and/or sector exclusions as per the RBC Policy and/or other extra-financial criteria.

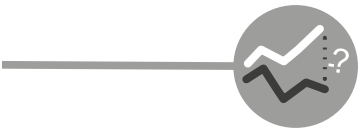

- The financial product shall have the weighted average ESG score of its investment strategy portfolio higher than the weighted average ESG score of its investment universe.

- - The financial product shall have the weighted average greenhouse gas (GHG) intensity of its investment strategy portfolio lower than the weighted average greenhouse gas (GHG) intensity of its investment universe

- The financial product shall invest at least 35% of its assets in "sustainable investments" as defined in Article 2 (17) of SFDR and as disclosed in the asset allocation below. Criteria to qualify an investment as "sustainable investment" are indicated in the above question "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives" and the quantitative and qualitative thresholds are mentioned in the main part of the Prospectus

  There is no guarantee that extra-financial filter or criteria is applied at any moment. For instance, between two strategy reshuffles, if a company were deemed to not fulfil anymore an ESG criteria, it may be excluded only at the next reshuffle following the reference benchmark administrator rules.

  In addition, the management company has implemented a voting and engagement policy. Several examples of commitments are detailed in the vote and commitment section of the Sustainability Report. These documents are available at the following link: https://www.bnpparibas-am.com/en/sustainability-documents/

How did this financial product perform compared to the reference benchmark?

The BNP Paribas Value Europe ESG (NTR) index (Bloomberg: BNPIFEVE index) has been designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the financial product.

The methodology used for the calculation of the reference benchmark can be found at: https://indx.bnpparibas.com/nr/FELETR.pdf.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How does the reference benchmark differ from a broad market index?

The reference benchmark incorporates environmental or social criteria in its asset allocation methodology whereas a relevant broad market index does not and is usually market-capitalization weighted.

How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Due to the index nature of the financial product, its sustainability indicators are directly linked to the ones of the tracked index. Consequently the performance of the financial product with regard to sustainability indicators representative of the alignment of the reference benchmark with the environmental or social characteristics promoted are the ones disclosed above under the question "How did the sustainability indicators perform?"

How did this financial product perform compared with the reference benchmark?

Due to the index nature of the financial product and its investment objective to replicate the performance of the reference benchmark while maintaining a tracking error between the financial product and the index below 1%, the performance of the financial product and the one of the reference benchmark are very close.

How did this financial product perform compared with the broad market index?

	Carbon footprint (tCO2 eq/EV) [1,2]	ESG score[2]
Financial product	60.4	64.2
Broad market index[3]	63.9	60.9

(1) The carbon footprint is the sum of each carbon emission divided by its simplified enterprise value, multiplied by the weight in the portfolio. Carbon emissions represent the sum of a company's scope 1 (direct emissions from installations) and scope 2 (indirect emissions linked to the company's energy consumption) emissions. Simplified enterprise value measures a total value and is calculated as the sum of market capitalization and total debt. The footprint is expressed in tons of CO_2 equivalent per million euros of entreprise value.

(2) Source: BNP Paribas Asset Management. Another provider of extra-financial data (e.g. ESG score, carbon footprint) as well as a slightly different initial investment universe may be used to determine and implement extra-financial targets of the investment strategy. For data availability purposes regarding this periodic reporting, the figures provided are based on BNP Paribas Asset Management data and may not strictly reflect these targets.
