INDEX DESCRIPTION:

The Index is composed of emerging market debt securities with an Environmental, Social and Governance (ESG) scoring and screening methodology (such as environmental conventions, labour rights conventions, human rights, etc.) to tilt toward issuers ranked higher on ESG criteria, and to underweight or remove issuers that rank lower. As a result, those subject to significant violations of the UN Global Compact principles and those involved in severe ESG-related controversies are excluded from the Index. The type of approach implemented here is Best-effort (a type of ESG selection consisting of giving priority to the issuers demonstrating an improvement in or good prospects for their ESG practices and performance over time). The extra-financial strategy of the Index may comprise methodological limitations such as the risk related to ESG investment or the Index rebalancing. Further information on the index, its composition, calculation and rules for monitoring and periodic rebalancing, as well as information on the general methodology common to all J.P Morgan ESG indices, can be found at www.jpmmorgan.com. The Comparison Index is the JPM EMBI Global Diversified (USD) RI

Portfolio	-0.12	-1.90	-0.67

PORTFOLIO COVERAGE

	Coverage rate
ESG coverage	97.16 %

MSCI SUSTAINABILITY CHARACTERISTICS (AS AVAILABLE ON MSCI WEBSITE ON END OF PREVIOUS MONTH)

MSCI ESG Fund Rating	BB		
MSCI Weighted Average Carbon Intensity (tons of CO2e/\$M Sales)	120.28	MSCI Weighted Average Carbon Intensity Coverage	4.73%
MSCI ESG Quality Score (0-10)	4.17		

Total ESG score

BNPP AM's internal ESG scoring methodology determines an issuer's ESG score by evaluating performance vs. scoring peers on a narrow set of key ESG issues related to the environment (e.g. climate change), social issues (e.g. human resources management) and governance (e.g. independence and competence of directors). BNPP AM uses numerous research inputs and data sources (e.g. Sustainalytics, ISS & Trucost) to determine issuers' ESG scores. If the issuer's commitments and practices on a pillar of assessment (E,S or G) is better than scoring peers, it will receive a positive 'contribution' for this pillar. Each issuer is assigned a final score from 1 to 99 which is the result of 50 as a reference plus the sum of the contributions from each of the three pillars.

ESG Contribution

The ESG contributions are determined by BNP Paribas Asset Management's ESG analysts on the basis of detailed criteria to systematically evaluate companies' commitments, performance and practices in the areas of environmental, social and governance. Each of the above contributions at the portfolio level, is the weighted average of the contributions of the individual portfolio holdings. Environmental Contribution (E) takes into account, among other things, climate change, environmental risk management, and the use of natural resources. Social Contribution (S) takes into account, among other things, human capital management, the quality of social dialogue, and the respect of diversity. Governance Contribution (G) takes into account, among other things, the transparency on executive compensation, the fight against corruption, and gender equality.

Portfolio Coverage

The coverage represents, within an Index replicated by the fund, the percentage of securities that have an ESG score or carbon footprint using BNPP AM's internal methodology which can be lower than the full coverage offered per the index provider

MSCI ESG Fund Rating

The MSCI ESG rating is calculated as a direct mapping of ESG Quality Scores to letter rating categories (e.g. AAA = 8.6-10). The ESG Ratings range from Leader (AAA/AA), average (A, BBB, BB) to laggard (B, CCC).

MSCI Weighted Average Carbon Intensity

It measures a fund's exposure to carbon intensive companies. This figure represents the estimated greenhouse gas emissions per \$1 million in sales across the fund's holdings. This allows for comparisons between funds of different sizes.

MSCI Weighted Average Carbon Intensity Coverage.

It is the percentage of the fund's holdings for which MSCI Carbon Intensity data is available. The MSCI Weighted Average Carbon Intensity metric is displayed for funds with any coverage. Funds with low coverage may not fully represent the fund's carbon characteristics given the lack of coverage.

MSCI ESG Quality Score (0-10)

The MSCI ESG Quality Score (0-10) for funds is calculated using the weighted average of the ESG scores of fund holdings. The Score also considers ESG rating trend of holdings and the fund exposure to holdings in the laggard category. MSCI rates underlying holdings according to their exposure to industry specific ESG risks and their ability to manage those risks relative to peers.

For more information on ESG indicators, please refer to BNPP AM's webpage : <https://www.bnpparibas-am.com/en/esg-scoring-framework/> & <https://www.bnpparibas-am.com/en/measuring-carbon-footprints/>

RISK

Risk Indicator

Risk Analysis (1 year, weekly)

Risk Analysis (1 year, weekly)	Fund
Volatility	5.41
Ex-post Tracking Error	0.13
Tracking Error Official Benchmark / Comparison Index	0.64
Modified Duration (31.10.2025)	6.96
Yield to Maturity (31.10.2025)	5.90
Average coupon	5.39
Duration	6.91

The summary risk indicator is a guide to the level of risk of this Product compared to other Products. It shows how likely it is that the Product will lose money

We have classified this Product as 3 out of 7, which is a medium-low risk class.

The risk category is justified by the investment mainly in interest rate instruments. The investor's attention is drawn to the fact that an increase in interest rates results in a decrease in the value of investments in bonds and debt instruments and more generally fixed income instruments.

Be aware of currency risk. If the currency of your account is different from the currency of this Product, the payments you will get depend on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

Other risks materially relevant to the Product not included in the summary risk indicator:

- **Credit risk:** the risk that the creditworthiness of an issuer may deteriorate or that it may default, potentially causing the value of the associated instruments to fall.
- **Liquidity risk:** this risk arises from the difficulty of selling a security at its fair value and within a reasonable period of time due to a lack of buyers.
- **Operational risk:** in the event of an operational breakdown within the management company, one of its representatives or the depositary, investors could face various disruptions (late payment, delivery etc.).

For additional details regarding the risks, please refer to the prospectus.

This Product does not include any protection from future market performance so you could lose some or all of your investment.

GLOSSARY

Tracking Error

The tracking error measures the volatility of a portfolio's relative return in relation to its benchmark index.

Volatility

An asset's volatility is the standard deviation of its return. As a measure of dispersion, it evaluates the uncertainty of asset prices, which is often equated to their risk. Volatility can be calculated ex post (retrospectively) or estimated ex ante (anticipatively).
