<b>Index</b>	The Index is a modified equal-weighted index designed by NASDAQ to objectively identify and select stocks from the NASDAQ Eurozone Index, which may generate positive alpha relative to traditional passive-style indices through the use of the AlphaDEX® selection methodology. The NASDAQ Eurozone Index is a comprehensive, rules-based index designed to measure stock market performance in the Eurozone. Details of the Index and how the Index is calculated are set out below.

**Index Description**

The description below is a summary of information provided by the Index Provider on the methodology for the construction of the Index.

The NASDAQ Eurozone Index is a comprehensive, rules-based index designed to measure stock market performance in the Eurozone. The companies for the NASDAQ Eurozone Index are selected based on these rules: all Eurozone securities that have (1) float adjusted market values of USD\$100 million or more; and (2) annual US dollar value traded of at least USD\$50 million. NASDAQ creates and maintains the NASDAQ Eurozone Index.

Alpha is an indication of how much an investment outperforms or underperforms on a risk-adjusted basis relative to its benchmark. The inception date of the Index was 2 September 2014. The initial divisor was created to set a benchmark value of 100.00 on 2 September 2014. The initial divisor is the number by which the total share prices of all of the initial constituent securities in the index are divided by to obtain the initial value of the index.

For details of the exact composition of the NASDAQ Eurozone Index, please refer to the NASDAQ website. For details of the exact composition of the NASDAQ AlphaDEX® Eurozone Index, please see the following address <https://indexes.nasdaqomx.com/Index/Directory/Custom%20Indexes>.

The Index is constructed by NASDAQ in the following manner:

1. Start with all companies in the NASDAQ Eurozone Index.
2. Exclude the following:
  - i. Stocks which do not trade on an eligible exchange.
  - ii. Duplicates (multiple share classes) of a common issuer.
  - iii. Stocks with an average daily dollar volume over any rolling five day period during the latest 60 day trading period (US markets) of less than \$500,000.
  - iv. Stocks with a market cap less than the midcap breakpoint (50th percentile).
  - v. Should the steps above result in an eligible universe of fewer than 200 stocks, the next largest stock below the NYSE midcap breakpoint passing all other eligibility requirements is added until the eligible universe reaches 200 stocks.
3. Rank all remaining stocks in the universe on both growth and value factors. The five growth factors are 3, 6 & 12 month price appreciation, sales to price and 1 year sales growth. The three value factors are book value to price, cash flow to price and return on assets. All stocks are ranked on the sum of ranks for the growth factors and, separately, all stocks are ranked on the sum of ranks for the value factors. A stock must have data for all growth and/or value factors to receive a rank for that style.
4. Each stock receives the best rank from step 2 as its selection score.

Fund Characteristics

	<p>5. The top 150 stocks based on the selection score determined in step 3 comprise the “selected stocks.” The “selected stocks” are then split into quintiles based on their selection score. The top ranked quintile receives 5/15 (33.3%) of the portfolio weight with successive quintiles receiving 4/15 (26.7%), 3/15 (20.0%), 2/15 (13.3%) and 1/15 (6.7%), respectively. Stocks are equally weighted within each quintile.</p> <p>The Index is rebalanced and reconstituted semi-annually as of the last business day of March and September and the costs of the rebalancing which are not expected to be significant will be borne by the Fund.</p> <p>The Fund is subject to tracking error risk, which is the risk that its returns may not track exactly those of the Index.</p>
