YieldMax™ Big Tech Option Income UCITS ETF

Product Objectives

YieldMax™ Big Tech Option Income UCITS ETF (YMAG) is an actively managed ETF that seeks current income and capital appreciation via direct investments in a select portfolio of technology and technology related companies. YMAG aims to distribute such income on a monthly basis.

Key Risks

When you invest in ETFs your capital is fully at risk and may not get back the amount originally invested. Exchange rates can have a positive or negative effect on returns. The value of equities and equity-related securities can be affected by daily stock and currency market movements.

* Source: HANetf/Bloomberg. The Distribution Rate is the annual rate an investor would receive if the most recently declared distribution, which includes option income, remained the same going forward. The Distribution Rate is calculated by multiplying an ETF's Distribution per Share by twelve (12), and dividing the resulting amount by the ETF's latest NAV on the announcement date. The Distribution Rate represents a single distribution from the ETF and does not represent its total return.

An investment in an exchange traded product is dependent on the performance of the underlying asset class, less costs, but it is not expected to track that performance exactly. The Products involve numerous risks including among others, general market risks relating to underlying adverse price movements in an Index (for ETFs) or underlying asset class and currency, liquidity, operational, legal and regulatory risks. In addition, in relation to Cryptocurrency ETCs, these are highly volatile digital assets and performance is unpredictable.
