KRC Cat Bond UCITS ETF

Reasons to Invest

Uncorrelated performance

Catastrophe bonds potentially offer returns driven by natural events rather than economic cycles or market sentiment. This non-correlated behaviour can provide meaningful diversification, potentially helping portfolios remain resilient during periods of equity or credit market volatility.

Minimal duration or credit risk

Cat bonds typically offer competitive yields derived from short-term, high-quality collateral plus a premium for assuming catastrophe risk. This structure results in floating-rate income with minimal credit or duration exposure, which can be appealing in an unpredictable rates environment.

Experienced active management

Historically reserved for institutional investors, the cat bond market is now accessible through this actively managed UCITS ETF. Combining King Ridge Capital's specialist expertise with daily liquidity and transparent pricing, the ETF brings professional catastrophe bond management to a broader investor audience.

Product Objectives

KRC Cat Bond UCITS ETF (CATB) is Europe's first UCITS ETF providing access to the catastrophe bond market, an asset class offering attractive floating rate yields and low correlation to traditional markets. Managed by King Ridge Capital, a specialist in insurance-linked securities (ILS), the ETF invests in a diversified portfolio of cat bonds that transfer natural disaster risk, such as hurricanes and earthquakes, from insurers to capital markets. The ETF combines King Ridge's expertise with the transparency, efficiency, and daily liquidity of the UCITS ETF structure.

Key Risks

When you invest in ETFs your capital is fully at risk and may not get back the amount originally invested. Exchange rates can have a positive or negative effect on returns. The value of equities and equity-related securities can be affected by daily stock and currency market movements.
