FUND OVERVIEW

The fund aims to achieve a return on your investment, through a combination of capital growth and income on the Fund's assets, which reflects the return of the S&P Listed Private Equity Index.

KEY BENEFITS

- 1. Aims to provide exposure to large, liquid, and listed private equity companies from developed markets.
- 2. Private equity companies invest directly into or buy out private companies.
- 3. Designed for investors wanting tradable exposure to leading private equity companies

RISK INDICATOR

CAPITAL AT RISK: The value of investments and the income from them can fall as well as rise and are not guaranteed. Investors may not get back the amount originally invested.

KEY RISKS:

- Investment risk is concentrated in specific sectors, countries, currencies or companies. This means the Fund is more sensitive to any localised economic, market, political, sustainability-related or regulatory events.
- Derivatives may be highly sensitive to changes in the value of the asset on which they are based and can increase the size of losses and gains, resulting in greater fluctuations in the value of the Fund. The impact to the Fund can be greater where derivatives are used in an extensive or complex way.
- Private equity securities can be affected by daily stock market movements, political and economic news, company earnings and significant corporate events. Private equity companies may involve additional risks including higher levels of borrowing, unclear distribution of risk and losses within the private equity structure and constraints on buying and selling underlying investments quickly.
- Counterparty Risk: The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Share Class to financial loss.
