FUND OVERVIEW

The Fund seeks to track the performance of an index composed of a sub-set of MSCI Europe stocks that have been experiencing an upward price trend.

KEY BENEFITS

- 1. Exposure to a sub-set of MSCI stocks that have been experiencing an upward price trend
- 2. Direct investment in regional companies experiencing an upward price trend
- 3. Regional exposure with a focus on stocks that have been experiencing an upward price trend

RISK INDICATOR

CAPITAL AT RISK: The value of investments and the income from them can fall as well as rise and are not guaranteed. Investors may not get back the amount originally invested.

KEY RISKS:

- The value of equities and equity-related securities can be affected by daily stock market movements. Other influential factors include political, economic news, company earnings and significant corporate events.
- Index Methodology Risk: Although the benchmark index aims to seek exposure to securities with high quality characteristics from within the Parent Index, there is no guarantee that this objective will be achieved.
- Factor Focus Risk: Indices with a factor focus are less diversified than their parent index because they have predominant exposure to a single factor rather than the multiple factor exposure of most indices. Therefore they will be more exposed to factor related market movements. Investors should consider this Fund as part of a broader investment strategy.
- Counterparty Risk: The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Share Class to financial loss.
