# USD Emerging Markets Sovereign Bond UCITS ETF

Class: JPM USD Emerging Markets Sovereign Bond UCITS ETF - EUR Hedged (acc)

## Fund overview

ISIN IE00BDDRDY39		
<b>Investment objective:</b> The Sub-Fund aims to provide an exposure to the performance of bonds issued by the governments or quasi-government entities of emerging markets countries globally which are denominated in US Dollars.		
<b>Investment policy:</b> The Sub-Fund pursues a passively managed (indextracking) strategy.		
<b>Investment approach</b> <ul style="list-style-type: none"><li>• Seeks to provide returns that correspond to those of its Index by using the optimisation methodology.</li><li>• The Index is comprised of USD-denominated emerging markets sovereigns and quasi-sovereigns, and follows a rules-based methodology that aims to filter out the riskiest countries in the universe, while maintaining consistent exposure to the high yield segment of the EM market.</li></ul>		
<b>Investor profile:</b> This product is intended for investors who plan to stay invested for at least 5 years. <ul style="list-style-type: none"><li>• Investors should understand the risks involved, including the risk of losing all capital invested and must evaluate the Sub-Fund objective and risks in terms of whether they are consistent with their own investment goals and risk tolerances. The Sub-Fund is not intended as a complete investment plan.</li><li>• Typical investors in the Sub-Fund are expected to be investors who want to take exposure to the markets covered by the Index, with an overlay of ESG integration and values and norms-based screening of its investment universe and are prepared to accept the risks associated with an investment of this type, including the volatility of such market.</li></ul>

## Key risks

The value of your investment may fall as well as rise and you may get back less than you originally invested.

To the extent that the Sub-Fund uses financial derivative instruments, the risk profile and the volatility of the Sub-Fund may increase. That notwithstanding, the risk profile of the Sub-Fund is not expected to significantly deviate from that of the Index as a result of its use of financial derivative instruments.

The value of debt securities may change significantly depending on economic and interest rate conditions as well as the credit worthiness of the issuer. These risks are typically increased for below investment grade debt securities which may also be subject to higher volatility and lower liquidity than investment grade debt securities. The credit worthiness of unrated debt securities is not measured by reference to an independent credit rating agency.

Emerging markets may be subject to increased political, regulatory and economic instability, less developed custody and settlement practices, poor transparency and greater financial risks. Emerging market currencies may be subject to volatile price movements. Emerging market and below investment grade debt securities may also be subject to higher volatility and lower liquidity than non-emerging market and investment grade debt securities respectively. The Sub-Fund is not expected to track the performance of the Index at all times with perfect accuracy. The Sub-Fund is, however, expected to provide investment results that, before expenses, generally correspond to the price and yield performance of the Index.

Movements in currency exchange rates can adversely affect the return of your investment. The currency hedging used to minimise the effect of currency fluctuations may not always be successful. Investors may have exposure to currencies other than the currency of their Share Class.

Further information about risks can be found in the "Risk Information" section of the Prospectus.

available on our website.

## Performance information

Source: J.P. Morgan Asset Management. Share class performance is shown based on the NAV (net asset value) of the share class with income (gross) reinvested including actual ongoing charges excluding any entry and exit fees. Performance is shown based on the NAV which may not be the same as the market price of the ETF. Individual shareholders may realise returns that are different to the NAV based returns.

The return of your investment may change as a result of currency fluctuations if your investment is made in a currency other than that used in the past performance calculation.

Indices do not include fees or operating expenses and you cannot invest in them. Investors should note that the benchmark data presented is expressed in the fund's base currency, which may be different from the currency in which the share class performance data is presented. Investors should exercise caution when comparing the benchmark data with share class performance data that are in different currencies, as currency fluctuations can contribute to differences in performance outcomes.

The benchmark is for comparative purposes only unless specifically referenced in the Sub-Funds' Investment Objective and Policy.

## Definitions

**NAV** Net Asset Value of a fund's assets less its liabilities per Share.

**Correlation** measures the strength and direction of the relationship between movements in fund and benchmark returns. A correlation of 1.00 indicates that fund and benchmark returns move in lockstep in the same direction.

**Alpha (%)** a measure of excess return generated by a manager compared to the benchmark. An alpha of 1.00 indicates that a fund has outperformed its benchmark by 1%.

**Beta** measures a fund's sensitivity to market movements (as represented by the fund's benchmark). A beta of 1.10 suggests the fund could perform 10% better than the benchmark in up markets and 10% worse in down markets, assuming all other factors remain constant. Usually the higher betas represent riskier investments.

**Annualised volatility (%)** measures the extent to which returns vary up and down over a given period.

**Sharpe ratio** performance of an investment adjusting for the amount of risk taken (compared a risk-free investment). The higher the Sharpe ratio the better the returns compared to the risk taken.

**Tracking error (%)** measures how much a fund's returns deviate from those of the benchmark. The lower the number the closer the fund's historic performance has followed its benchmark.

**Information ratio** measures if a manager is outperforming or
