INVESTMENT OBJECTIVE

The investment objective of the Fund is to provide an exposure to futures contracts on physical commodities.

INVESTMENT POLICY

In order to achieve this investment objective, the Fund will seek to track the performance of the Index, before the deduction of the TER and other Fund expenses, as further described under "*Fees and Expenses*" in the Prospectus. It will do so by seeking to be fully exposed to the performance of the Index using "unfunded" total return OTC swaps with one or more counterparties (each, a "**Long Index Swap**"), as described under "*Unfunded OTC Swap Model*" and in Schedule II of the Prospectus.

In tracking the performance of the Index, the Fund may have an indirect exposure to the individual commodities comprised within the Index of up to 20% of its Net Asset Value, which limit may be raised to 35% for a single commodity in exceptional market conditions, including (but not limited to) circumstances in which such commodity occupies a dominant market position.

For the purposes of determining the foregoing limits, sub-categories of a single commodity (for instance, from different regions or markets or derived from the same primary commodity through an industrialised process) are considered as being the same commodity. However, sub-categories of a single commodity are not considered as being the same commodity if they are not highly correlated. It is possible that certain commodities which are derived from a single primary commodity may be, or may at some point in the future become, highly correlated and, as such, be deemed to be a single commodity for the purposes of determining the foregoing limits. Historically, oil and its derivatives have been highly correlated.

The Index provides a return equivalent to a fully "collateralised" investment in a diversified portfolio of commodity futures across the following commodity groups: (1) Energy; (2) Precious Metals; (3) Industrial Metals; (4) Livestock; (5) Grains; and (6) Softs.

The Index return is comprised of: (i) the "spot" return reflecting the day-to-day changes in the prices of the commodity futures comprised within the Index; (ii) the "roll" return associated with periodically selling the futures contracts that are nearing their expiry dates and buying later-dated equivalents in order to maintain exposure to the commodity futures on an ongoing basis; and (iii) the "collateral" return reflecting the interest that a "real life" commodity investor would earn by investing the cash that they would ultimately need to settle the futures contract at the future delivery date. This may include investments in instruments such as U.S. Treasury Bills or other market-standard alternatives, including rates derived from secured overnight financing transactions. Please refer to the Index methodology for further information.

RISK MANAGEMENT

The Investment Manager uses relative value-at-risk to assess the global exposure of the Fund on a daily basis.

The Fund may utilise the *"Reverse Repurchase Agreement"* model and the *"Short Basket Swap"* model, each as described in the "*Unfunded OTC Swap Model*" section in the Prospectus, or a combination of the two models.

The actual level of leverage at any given time will vary according to the degree to which the Fund is invested in each of the respective models at such time. Accordingly, the Fund is expected to be leveraged between 100% and a maximum of 210% of its Net Asset Value at any given time.

PROFILE OF A TYPICAL INVESTOR

It is expected that investors in the Fund will be sophisticated investors (and/or informed investors who have taken professional advice) who: (i) are familiar with commodity futures contracts and understand the concepts "rolling", "backwardation" and "contango" and the impact that these concepts may have on the performance of the Index; (ii) understand the risks associated with an investment in the Fund; (iii) accept the levels of volatility associated with the relevant commodity futures markets (or sectors thereof) to which the Fund has exposure; and (iv) are able to bear the risk of losing their entire investment over the medium to long

term.

RISK FACTORS

Investors are referred to "*Risk Factors*" and Schedule II of the Prospectus and should consider all relevant risk factors prior to investing in the Fund. Investors should consider, in particular those relating to Shares, Index Tracking-Related Risks, Investing in FDIs, Commodities and Commodities Future Risks.
