Investment manager

Legal & General Investment Management Limited is the investment manager for this ETF and is responsible for its day-to-day investment management decisions. The team is highly experienced with respect to all aspects relating to the management of an ETF portfolio, including collateral management, OTC swap trading, adherence to UCITS regulations and counterparty exposure and monitoring.

Key risks

- The value of an investment and any income taken from it is not guaranteed and can go down as well as up; you may not get back the amount you originally invested.
- An investment in the ETF involves a significant degree of risk. Any decision to invest should be based on the information contained in the relevant prospectus. Prospective investors should obtain their own independent accounting, tax and legal advice and should consult their own professional advisers to ascertain the suitability of the ETF as an investment.
- Market trading in commodity futures contracts can be extremely "volatile". This means that the prices of the futures contracts comprised in the Index may fluctuate rapidly based on numerous factors, including supply and demand relationships, weather, agriculture, trade, economic or political events, technological developments, interest rates and governmental policies.
- If a swap counterparty is no longer willing or able to continue entering into swaps with the ETF, the ETF will not be able to continue tracking the Index.
- If a swap counterparty increases the cost of entering into swaps with the ETF, the ETF's performance will be negatively impacted.
- Third party service providers (such as swap counterparties or the ETF's depositary) may go bankrupt and fail to pay money due to the ETF or return property belonging to the ETF.
- If the Index provider stops calculating the Index or if the ETF's license to track the Index is terminated, the ETF may have to be closed.
- It may not always be possible to buy and sell ETF shares on a stock exchange or at prices closely reflecting the NAV.
- There is no capital guarantee or protection on the value of the ETF. Investors can lose all the capital invested in the ETF.
- Please refer to the "Risk Factors" section of the Issuer's Prospectus and the Fund Supplement.
- This Fund may have underlying investments that are valued in currencies that are different from the currency of this share class, in which case exchange rate fluctuations will impact the value of your investment. In addition, the return in the currency of this share class may be different to the return in your own currency.

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as class 4 out of 7, which is a medium risk class. This product does not include any protection from future market performance so you could lose some or all of your investment.

Be aware of currency risk. You may receive payments in a different currency, so the final return you will get depend on the exchange rate between the two currencies. This risk is not considered in the indicator shown above. The fund is not covered by an investor compensation scheme.
