

PIMCO Advantage Euro Short-Term High Yield Corporate Bond UCITS ETF

ETF CLASS ACCUMULATION AND INCOME SHARES

Fund Description

The PIMCO Advantage Euro Short-Term High Yield Corporate Bond UCITS ETF seeks to maximise total return, consistent with prudent investment management. The Fund will seek to achieve its investment objective by investing, under normal circumstances, at least 80% of its assets in a diversified portfolio of Euro denominated high yield Fixed Income Instruments. The average portfolio duration of the Fund will normally remain within +/- 1 year of the ICE BofA 0-5 Year Euro Developed Markets High Yield 2% Constrained Index.

Potential Investor Benefits

Enhanced Yield Potential: Short-dated Euro-denominated high yield corporate bonds offer a higher yield relative to other Euro-denominated fixed income asset classes to compensate investors for additional credit risk.

Attractive Risk-Adjusted Returns: Over longer periods of time, short-dated Euro-denominated high yield corporate bonds have historically benefited from a lower volatility profile than the broader European high yield market while offering the attractive return potential of the asset class.

Potential Fund Advantage

PIMCO's Active Management Approach: The forward-looking, disciplined investment policy utilizes a top-down/bottom-up approach to assess relative value in different market environments.

Risk and Reward profile

Credit and Default Risk: A decline in the financial health of an issuer of a fixed income security can lead to an inability or unwillingness to repay a loan or meet a contractual obligation. This could cause the value of its bonds to fall or become worthless. Funds with high exposures to non-investment grade securities have a higher exposure to this risk. **Derivatives and Counterparty Risk:** The use of certain derivatives could result in the fund having a greater or more volatile exposure to the underlying assets and an increased exposure to counterparty risk. This may expose the fund to larger gains or losses associated with market movements or in relation to a trade counterparty being unable to meet its obligations. **Liquidity Risk:** Difficult market conditions could result in certain securities becoming hard to sell at a desired time and price. **Interest Rate Risk:** Changes in interest rates will usually result in the values of bond and other debt instruments moving in the opposite direction (e.g. a rise in interest rates likely leads to a fall in bond prices). **Index Tracking Risk:** Fund performance can potentially deviate from the reference index due to market conditions, transaction costs and different replication techniques such as optimization & sampling. **ESG Risk:** At PIMCO, we define ESG Integration as the consistent consideration of material ESG factors into our investment research process to enhance our clients' risk-adjusted returns. Material ESG factors may include but are not limited to: climate change risks, social inequality, shifting consumer preferences, regulatory risks, talent management or misconduct at an issuer, among others. We recognize that ESG factors are increasingly essential inputs when evaluating global economies, markets, industries and business models. Material ESG factors are important considerations when evaluating long-term investment opportunities and risks for all asset classes in both public and private markets. Integrating ESG factors into the evaluation process does not mean that ESG information is the sole or primary consideration for an investment decision; instead, PIMCO's portfolio managers and analyst teams evaluate and weigh a variety of financial and non-financial factors, which can include ESG considerations, to make investment decisions. The relevance of ESG considerations to investment decisions varies across asset classes and strategies. The Fund's ESG investing strategy may select or exclude securities of certain issuers for reasons other than financial performance. Such strategy carries the risk that the Fund's performance will differ from similar funds that do not utilize an ESG investing strategy. For example, the application of this strategy could affect the Fund's exposure to certain sectors or types of investments, which could negatively impact the Fund's performance. There is no guarantee that the factors utilized by the Investment Advisor will reflect the opinions of any particular investor, and the factors utilized by the Investment Advisor may differ from the factors that any particular investor considers relevant in evaluating an issuer's ESG practices. Future ESG development and regulation may impact the Fund's implementation of its investment strategy. In addition, there may be cost implications arising from ESG related due diligence, increased reporting and use of third-party ESG data providers.

PIMCO duration calculation that adjusts the durations of credit securities to account for the potential that in the event of default investors will receive the recovery amount prior to the maturity of the security.[Ⓔ] Yields reported gross of fees, the deduction of which will reduce the yield. Yields are reported in the base currency of the fund and are not specific to the share class. PIMCO calculates a Fund's Estimated Yield to Maturity by averaging the yield to maturity of each security held in the Fund on a market weighted basis. PIMCO sources each security's yield to maturity from PIMCO's Portfolio Analytics database. When not available in PIMCO's Portfolio Analytics database, PIMCO sources the security's yield to maturity from Bloomberg. When not available in either database, PIMCO will assign a yield to maturity for that security from a PIMCO matrix based on prior data. The source data used in such circumstances is a static metric and PIMCO makes no representation as to the accuracy of the data for the purposes of calculating the Estimated Yield to Maturity. The Estimated Yield to Maturity is provided for illustrative purposes only and should not be relied upon as a primary basis for an investment decision and should not be interpreted as a guarantee or prediction of future performance of the Fund or the likely returns of any investment. [Ⓐ]Where permitted by the investment guidelines stated in the portfolios offering documents, "other" may include exposure to, convertibles, preferred, common stock, equity-related securities, and Yankee bonds.[Ⓝ]Net Other Short Duration Instruments includes securities and other instruments (except instruments tied to emerging markets by country of risk) with an effective duration less than one year and rated investment grade or higher or, if unrated, determined by PIMCO to be of comparable quality, commingled liquidity funds, uninvested cash, interest receivables, net unsettled trades, broker money, short duration derivatives and derivatives offsets. With respect to certain categories of short duration securities, the Adviser reserves the discretion to require a minimum credit rating higher than investment grade for inclusion in this category. Derivatives Offsets includes offsets associated with investments in futures, swaps and other derivatives. Such offsets may be taken at the notional value of the derivative position. [†] Differences in the Fund's performance versus the index and related attribution information with respect to particular categories of securities or individual positions may be attributable, in part, to differences in the pricing methodologies used by the Fund and the index.
