EUR IG BOND PARIS-ALIGNED CLIMATE ACTIVE CORE UCITS ETF

EUR Acc ISIN IE00BN4GXL63

Investment objective

The Fund aims to outperform Solactive ISS Paris Aligned Select Euro Corporate Bond Index (the Index) over the long term by investing in an actively managed portfolio of EUR investment grade (IG) fixed rate corporate bonds while also having the sustainable objective of reducing its carbon emissions, and meeting the requirements for Paris-aligned Benchmarks in Commission Delegated Regulation (EU) 2020/1818.

For the fund's investment policy, refer to the Additional fund information on page 3. **Past performance does not predict future returns.**

Additional fund information

Projected yields are based on numerous assumptions, details of which are available upon request. There is no guarantee the yield stated will be achieved. Tax assumptions and reliefs depend upon an investor's particular circumstances and may be subject to change. Janus Henderson does not currently levy a redemption charge. On 28 November 2025, the ETF transitioned from a passive index-based approach to a low tracking error, systematic active approach, the fund also changed its investment strategy and name. Prior to this change past performance was therefore achieved under circumstances that no longer apply. The Fund was previously named the Janus Henderson EUR IG Bond Paris-aligned Climate Core UCITS ETF. Please note: due to rounding the figures in the holdings breakdowns may not add up to 100%. This is an Irish collective asset-management vehicle regulated by the Central Bank of Ireland. Note that any differences among portfolio securities currencies, share class currencies and costs to be paid or represented in currencies other than your home currency will expose you to currency risk. Costs and returns may increase or decrease as a result of currency and exchange rate fluctuations. To obtain our prospectus and any additional information please visit our website on: www.janushenderson.com. Investment into the fund will acquire units/shares of the fund itself and not the underlying assets owned by the fund. Cash balances and exposures are based on settled and unsettled trades as at the reporting date.

Investment policy

The Fund will seek to achieve its investment objective primarily through investment in a portfolio of EUR IG fixed rate corporate bonds. To achieve its sustainable investment objective, the Fund aims to limit its corporate bond investments to issuers that are constituents of the Index and reduce its weighted average carbon emissions so that they are lower than or equal to those of the Index. While it is intended that the Fund's investments will comprise IG issues, issues may be downgraded and in such event the Fund may hold non-IG issues until such time as it is possible and practicable (in the Investment Manager's view) to liquidate the position. As further described in the 'Investment Techniques and Instruments' section in the Prospectus, the Fund may also invest in other securities, including European government bonds, and/or financial derivative instruments (FDIs), for efficient portfolio management (EPM) purposes. The FDIs in which the Fund may invest for EPM purposes are swaps and futures, including European government bond futures, as described in the Prospectus.

Investment strategy

The Fund is actively managed with reference to the Index, targeting ex-ante annualised tracking error relative to the Index of up to 1.0%. Bonds are selected from an investment universe of EUR corporate bonds issued by issuers that are represented in the Index. The Investment Manager aims to select bonds that are undervalued or fairly valued relative to their creditworthiness, while avoiding bonds that are overvalued. Bonds are assessed based on fundamental issuer-level credit analysis and valuation scores, calculated using industry standard data and tools. The Investment Manager may also adjust the risk profile of the Fund relative to the Index in response to market conditions, using quantitative inputs such as sector credit spreads, historical return patterns and cross-asset class prices.

Fund specific risks

An issuer of a bond (or money market instrument) may become unable or unwilling to pay interest or repay capital. If this happens or the market perceives this may happen, the value of the bond will fall. Losses could be incurred if a counterparty became unwilling or unable to meet its obligations, or as a result of failure or delay in operational processes or the failure of a third party provider. Securities could become hard to value or to sell at a desired time and price, especially in extreme market conditions when asset prices may be falling, increasing the risk of investment losses. The environmental, social and governance screening criteria are embedded with the index selection process, which seeks to exclude bonds issued by companies involved in certain activities. The investment manager is not Responsible for monitoring the screening process or confirming that all bonds which pass the screening process are issued by companies with adequate environmental, social or governance standards. Derivatives may be used with the aim of reducing risk or managing the portfolio more efficiently. However, this introduces other risks, in particular, that a derivative counterparty may not meet its contractual obligations. When interest rates rise (or fall), the prices of different securities will be affected differently. In particular, bond values generally fall when interest rates rise (or are expected to rise). This risk is typically greater the longer the maturity of a bond investment. Active management techniques that have worked well in normal market conditions could prove ineffective or negative for performance at other times.

Where available, overall Morningstar Rating™ is shown for share classes achieving a rating of 4 or 5 stars.

Glossary

Duration

Duration can measure how long it takes (in years) for an investor to be repaid a bond's price by the bond's total cash flows. Duration can also measure the sensitivity of a bond's or fixed-income portfolio's price to changes in interest rates. The longer a bond's duration, the higher its sensitivity to changes in interest rates, and vice versa. 'Going short duration' refers to reducing the average duration of a portfolio, while 'going long duration' refers to extending a portfolio's average duration.

WAM (Weighted Average Maturity)

The average time remaining until the maturity of assets in a portfolio.

Yield to maturity

Total annualised return anticipated on a bond if held until it matures, assuming all payments are made on time and reinvested at the same rate.
