**Ongoing Charges Figure†** 0.25%

† The Ongoing Charges Figure (OCF) covers administration, audit, depository, legal, registration and regulatory expenses incurred in respect of the Funds. When you invest with any fund manager, you pay a number of charges, starting with the Annual Management Charge (AMC) which covers the fund manager's costs of managing the fund. The AMC plus ongoing running costs and other operational expenses make up the fund's total 'ongoing charges figure'.

## Objectives and investment policy

- The Fund seeks to provide a combination of long-term capital appreciation with some income by investing in equity and fixed income securities, primarily through investment in other collective investment schemes.
- The Fund pursues an actively-managed investment strategy whereby the investment manager has discretion over the composition of the Fund's portfolio holdings and is not managed with reference to a benchmark index. However, as more particularly described below, the investment manager manages the Fund through pre-determined asset allocations to equity and fixed income securities using a combination of underlying collective investment schemes.
- The Fund will seek to achieve its investment objective by gaining exposure to a diversified portfolio composed approximately of 80% by value of equity securities and 20% by value of fixed income securities, which will, subject to the requirements of the Central Bank, be obtained predominantly via direct investment in passively managed exchange traded funds ("ETFs") or other collective investment schemes which track an index (together the "Target Funds"). The portfolio asset allocation may be reconstituted and rebalanced from time to time at the discretion of the investment manager. The Target Funds in which the Fund invests will be UCITS and may include other sub-funds of Vanguard Funds plc.
- It is intended that the Fund's indirect exposures, through its investment in the Target Funds, will be to: (1) shares of companies from developed and emerging markets; and (2) to fixed income securities, such as bonds, denominated in multiple currencies, from both developed and emerging markets issuers (for example, global investment grade debt, including treasury, government-related, corporate and securitised fixed-rate bonds). The Fund's exposure to the Target Funds is not intended to reflect any geographic or sectoral bias. The Fund will seek to indirectly hedge the non-EUR currency exposure within the fixed income allocation of the Fund's portfolio to EUR, by investing in EUR hedged share classes of the Target Funds.
- The Fund may use derivatives in order to reduce risk or cost and/or generate extra income or growth. The use of derivatives could increase or reduce exposure to underlying assets and result in greater fluctuations of the Fund's net asset value. A derivative is a financial contract whose value is based on the value of a financial asset (such as a share, bond, or currency) or a market index.

## Investment risk information

---

The value of investments, and the income from them, may fall or rise and investors may get back less than they invested.

Past performance is not a reliable indicator of future results.

Funds investing in fixed interest securities carry the risk of default on repayment and erosion of the capital value of your investment and the level of income may fluctuate. Movements in interest rates are likely to affect the capital value of fixed interest securities. Corporate bonds may provide higher yields but as such may carry greater credit risk increasing the risk of default on repayment and erosion of the capital value of your investment. The level of income may fluctuate and movements in interest rates are likely to affect the capital value of bonds.

Some funds invest in emerging markets which can be more volatile than more established markets. As a result the value of your investment may rise or fall. Investments in smaller companies may be more volatile than investments in well-established blue chip companies.

The Funds may use derivatives in order to reduce risk or cost and/or generate extra income or growth. The use of derivatives could increase or reduce exposure to underlying assets and result in greater fluctuations of the Fund's net asset value. A derivative is a financial contract whose value is based on the value of a financial asset (such as a share, bond, or currency) or a market index.

Some funds invest in securities which are denominated in different currencies. Movements in currency exchange rates can affect the return of investments.

ETF shares can be bought or sold only through a broker. Investing in ETFs entails stockbroker commission and a bid- offer spread which should be considered fully before investing. For further information on risks please see the "Risk Factors" section of the prospectus on our website at <https://global.vanguard.com>.

Income may fluctuate in accordance with market conditions and taxation arrangements.
