Ongoing Charges Figure† 0.08%

† The Ongoing Charges Figure (OCF) covers administration, audit, depository, legal, registration and regulatory expenses incurred in respect of the Funds. When you invest with any fund manager, you pay a number of charges, starting with the Annual Management Charge (AMC) which covers the fund manager's costs of managing the fund. The AMC plus ongoing running costs and other operational expenses make up the fund's total 'ongoing charges figure'.

Objectives and investment policy

- The Fund employs a passive management – or indexing – investment approach, through physical acquisition of securities, and seeks to track the performance of the Bloomberg Sterling Gilt Float Adjusted Index (the "Index").
- The Index includes UK Gilts denominated in UK pounds sterling with maturities greater than one year.
- The Fund attempts to: 1. Track the performance of the Index by investing in a portfolio of Gilts that, insofar as possible and practicable, consists of a representative sample of the component securities of the Index. 2. Remain fully invested except in extraordinary market, political or similar conditions.

‡ Summary Risk Indicator

For professional investors only (as defined under the MiFID II Directive) investing for their own account (including management companies (fund of funds) and professional clients investing on behalf of their discretionary clients). Not to be distributed to the public.

Vanguard U.K. Gilt UCITS ETF

EUR Hedged Accumulating - An exchange-traded fund

Performance summary

EUR—Vanguard U.K. Gilt UCITS ETF
Benchmark — Bloomberg Sterling Gilt Float Adjusted Index in EUR - The Index is a widely recognised benchmark designed to reflect the total universe of publicly traded, fixed-coupon, dollar-denominated investment grade corporate bonds with maturities greater than one year and which have a minimum issue size of $250 million.

Annualised performance**	1 month	Quarter	Year to date	1 year	3 years	5 years	10 years	Since inception
Fund (Net of expenses)	-1.44%	-3.26%	-4.15%	-1.57%	0.28%	-6.84%	—	-6.69%
Benchmark	-1.42%	-3.23%	-4.07%	-1.47%	0.38%	-6.77%	-3.28%	-6.65%

**Figures for periods less than one year are cumulative returns. All other figures represent annual returns. Performance figures include the reinvestment of all dividends and any capital gains distributions. The performance data does not take account of the commissions and costs incurred in the issue and redemption of shares. Basis of fund performance is NAV to NAV with gross income invested. Basis of index performance is total return.

Performance and Data is calculated on closing NAV as at 30 September 2026.

Past performance is not a reliable indicator of future results.

Figures for periods of less than one year are cumulative returns. All other figures represent average annual returns. Performance figures include the reinvestment of all dividends and any capital gains distributions. The performance data does not take account of the commissions and costs incurred in the issue and redemption of shares. Basis of fund performance is NAV to NAV. Basis of index performance is total return. All performance is calculated in EUR, net of fees.

El Fondo invierte en valores denominados en divisas distintas a la divisa de la clase de acciones. Las variaciones en los tipos de cambio pueden afectar a la rentabilidad de las inversiones. Se emplean técnicas de cobertura de divisas para minimizar los riesgos asociados a las fluctuaciones en los tipos de cambio, aunque dichos riesgos no pueden eliminarse por completo. Dado que esta información se refiere a una clase de acciones en la que se utilizan dichas técnicas, a efectos de la sección «Rentabilidad histórica» anterior, la rentabilidad de esta clase de acciones se muestra frente al Bloomberg MSCI Global Corporate Float-Adjusted Bond Screened Index Bloomberg Sterling Gilt Float Adjusted Index in EUR (the "Hedged Index"), que es una versión cubierta en divisa del Índice.

Key investment risks

The value of bonds and fixed income-related securities is affected by influential factors such as interest rates, inflation, credit spreads and volatility which, in turn, are driven by other factors including political, economic news, company earnings and significant corporate events. Currency hedging may not completely eliminate currency risk in the Fund, and may affect the performance of the Fund.

Credit risk. The issuer of a financial asset held within the Fund may not pay income or repay capital to the Fund when due.

Liquidity risk. Lower liquidity means there are insufficient buyers or sellers to allow the Fund to sell or buy investments readily.

Counterparty risk. The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

Index tracking risk. The Fund is not expected to track the performance of the Index at all times with perfect accuracy. The Fund is, however, expected to provide investment results that, before expenses, generally correspond to the price and yield performance of the Index.

Index sampling risk. As the Fund uses an index sampling technique whereby a representative sample of securities are selected to represent the Index, there is the risk that the securities selected for the Fund may not, in the aggregate, approximate the full Index.

Bond risk. The Fund invests in bonds which may provide higher yields but as such may carry greater credit risk increasing the risk of defaults on repayment and erosion of the capital value of your investment. The level of income may fluctuate and movements in interest rates are likely to affect the capital value of bonds.

Inflation risk. The value of your investments may not be worth as much in the future due to changes in purchasing power resulting from inflation.

Please also read the risk factors section in the prospectus and the Key Information Document, both of which are available on the Vanguard website.

For professional investors only (as defined under the MiFID II Directive) investing for their own account (including management companies (fund of funds) and professional clients investing on behalf of their discretionary clients). Not to be distributed to the public.

Vanguard U.K. Gilt UCITS ETF

EUR Hedged Accumulating - An exchange-traded fund

Data as at 30 September 2026 unless otherwise stated.

Characteristics	Fund	Benchmark
Number of bonds	65	67
Yield to worst	5.29%	5.27%
Average coupon	3.5%	3.2%
Average maturity	10.9 years	10.9 years
Average quality	AA-	AA-
Average duration	7.5 years	7.5 years
Cash investment*	0.4%	–
Turnover rate	3%	–

The PTR (Portfolio Turnover Rate) approach considers the total security purchases and sales, the total subscriptions and redemptions and the average net assets of the fund to calculate the turnover figure. Yield to Worst is based on the local currencies of the underlying holdings. As such, the actual yield received in the share class currency may differ from the yield to maturity stated. Data as at 30 September 2026.

Market allocation

United Kingdom	99.6%
Other	0.4

Distribution by credit maturity (% of fund)

Under 1 Year	0.4%	20 - 25 Years	4.3%
1 - 5 Years	31.7	Over 25 Years	12.2
5 - 10 Years	30.8		
10 - 15 Years	12.9		
15 - 20 Years	7.7		

Distribution by credit quality (% of fund)

AA	99.6%
Not Rated	0.4

Credit-quality ratings for each issue are obtained from Bloomberg using ratings derived from Moody's Investors Service, Fitch Ratings and Standard & Poor's. When ratings from all three agencies are available, the median rating is used. When ratings are available from two of the agencies, the lower rating is used. When one rating is available, that rating is used.

Distribution by issuer (% of fund)

Treasury/federal	99.6%
Cash*	0.4

*The allocations are subject to circumstances such as timing differences between trade and settlement dates of underlying securities, that may result in negative weightings. The fund may also employ certain derivative instruments for cash management or risk management purposes that may also result in negative weightings. Allocations are subject to change. Cash includes physical cash on the account, cash like instruments (such as ultra-short term treasury bonds) and derivative instruments.

Glossary for ETF attributes

La sección de atributos del ETF de la primera página contiene una serie de métricas que los inversores profesionales utilizan para comparar los valores individuales con respecto a la media de un índice o mercado particular. Estas métricas también pueden utilizarse para valorar y comparar los fondos con el mercado, calculando la media de todos los valores del fondo y comparándola con la del índice de referencia. Se incluye una definición de los términos utilizados para mayor claridad.

El cupón medio es el tipo de interés promedio que devengan los valores de renta fija en los que invierte un fondo. Se expresa como porcentaje sobre el valor nominal.

La madurez media es la duración media hasta que los valores de renta fija en los que invierte un fondo alcanzan su vencimiento y se reembolsan, teniendo en cuenta la posibilidad de que el emisor pueda amortizar el bono antes de su fecha de vencimiento. La cifra refleja la proporción de los activos del fondo representada por cada valor; también incluye los contratos de futuros mantenidos. En general, cuanto mayor sea la madurez efectiva media, mayor será la fluctuación del valor liquidativo del fondo en respuesta a los cambios en los tipos de interés del mercado.

La calidad media es un indicador del riesgo de crédito. Esta cifra representa la media de las calificaciones asignadas a las posiciones de renta fija de un fondo por las agencias de calificación crediticia. Dichas agencias emiten su juicio tras evaluar la capacidad del emisor para cumplir con sus obligaciones. La calidad se clasifica en una escala, en la que Aaa o AAA indica a los emisores de bonos con mayor solvencia crediticia.

La duración media es una estimación de cuánto puede fluctuar el valor de los bonos en los que invierte un fondo ante una variación en los tipos de interés. Para calcular el posible cambio en el valor, multiplique la duración media por la variación de los tipos. Si los tipos de interés suben un punto porcentual, el valor de los bonos en un fondo con una duración media de cinco años disminuiría aproximadamente un 5%. Si los tipos bajan un punto porcentual, el valor aumentaría en un 5%.

El Yield to Worst (YTW) o rendimiento mínimo se aplica cuando la cartera está invertida en bonos rescatables (también llamados bonos callables o bonos amortizables anticipadamente). Cuando no es así, el rendimiento mínimo equivale al rendimiento hasta el vencimiento.

For professional investors only (as defined under the MiFID II Directive) investing for their own account (including management companies (fund of funds) and professional clients investing on behalf of their discretionary clients). Not to be distributed to the public.

EUR Hedged Accumulating - An exchange-traded fund

Investment risk information

El valor de las inversiones y de los ingresos que generan puede aumentar o disminuir, y es posible que los inversores no recuperen todo lo que invirtieron.

Las rentabilidades pasadas no son un indicador fiable de rentabilidades futuras.

Los fondos que invierten en valores de renta fija conllevan el riesgo de incumplimiento de pago y erosión del valor capital de su inversión y el nivel de ganancias puede fluctuar. El valor de los valores de renta fija puede verse afectado por los movimientos de los tipos de interés. Los bonos corporativos pueden proporcionar rendimientos superiores, pero también un mayor riesgo de crédito, lo que eleva el riesgo de incumplimiento de pago y erosión del valor capital de su inversión El nivel de ganancias puede fluctuar y el valor capital de los bonos puede verse afectado por los movimientos de los tipos de interés.

Los valores de un ETF solo pueden comprarse o venderse a través de un intermediario. La inversión en ETFs implica el pago de la comisión del intermediario y una diferencia entre el precio de compra y el de venta, lo que debe considerarse cuidadosamente antes de invertir.

El Fondo puede utilizar derivados con el objetivo de reducir el riesgo o los costes, o bien a fin de generar ingresos extraordinarios o posibilitar un mayor crecimiento. El uso de derivados podría aumentar o reducir la exposición a activos subyacentes y originar mayores fluctuaciones en el valor liquidativo del Fondo. Se entiende por «derivado» un contrato financiero cuyo valor se basa en el valor de un activo financiero (como una acción, un bono o una divisa) o un índice de mercado.

Algunos Fondos invierten en valores denominados en diferentes divisas. El valor de estas inversiones puede aumentar o disminuir como resultado de una modificación de los tipos de cambio.
