

NTSZ WisdomTree Eurozone Efficient Core UCITS ETF - EUR Acc

Investment Objective

The WisdomTree Eurozone Efficient Core UCITS ETF (the "Fund") seeks to track the price and yield performance, before fees and expenses, of the WisdomTree Eurozone Efficient Core UCITS Index (the "Index").

Index Description

The index is designed to track the performance of a 90% exposure to large and mid-cap eurozone equities, and 60% to euro denominated government bond futures contracts, effectively delivering a leveraged position to the traditional 60/40 portfolio. The index excludes companies that do not meet WisdomTree's ESG (environmental, social, and governance) criteria.

The index is comprised of three key components: the equity component, the bond component, and the cash component.

Equity component: The Index invests in a diversified basket of eurozone large and mid-capitalisation companies in order to achieve a 90% exposure to equity securities based on certain eligibility requirements outlined in the Index methodology.

Bond component: The Index provides synthetic exposure to a basket of Euro denominated government bond future contracts with maturities ranging from 2 to 30 years in order to achieve a 60% notional exposure to bonds. Currently the Bonds include French, German and Italian government bond futures contracts.

Cash component: The Index has roughly 10% exposure to cash in Euro, which serves as collateral for the euro denominated government bond futures contracts.

The Index has target weights of 90%, 60%, and 10% notional exposure on equity components, bond components, and cash components respectively. The Index is rebalanced on a quarterly basis.

Potential Benefits

Boost the risk-adjusted returns of an eurozone equity investment by delivering a 90% exposure to eurozone equities while improving the Sharpe ratio thanks to a fixed income overlay.

Improve capital efficiency in asset allocation allowing for increased exposure to non-core / diversifying investments.

Low-fee, core equity solution that can complement other active and passive strategies.

The ETF is physically backed and UCITS compliant.

Potential Risks

Although the Index was created to gain enhanced exposure to eurozone equities with added bond futures diversification to potentially lower volatility, there is no guarantee this objective will be achieved.

An investment in equities may experience high volatility and should be considered a longer-term investment.

This ETF contains elements of leverage that could lead to significantly magnified losses in comparison to investments that do not incorporate leverage.

Investment risk may be concentrated in specific sectors, countries, companies or currencies.

This list does not cover all risks-further risks are disclosed in the KID/ KIID and Prospectus.

Glossary

Dividend Weighted Index: an index that determines the weight of its constituents using the dividends paid by the security rather than another variable (the most common is Market Cap weighted indices).

Fully Replicated: assets are invested in securities that match the constituents of the relevant index, in the same proportion.

Fundamentally Weighted Index: an index that weights securities on the basis of factors such as dividends or earnings.

Large Cap, Mid Cap and Small Cap: refers to market capitalisation and is calculated by multiplying the price of a stock by the number of shares outstanding.

Listing currency: the trading currency on the exchange.

Physical (Optimised): assets are predominantly invested in securities that are constituents of the index, but may also hold securities whose characteristics closely resemble the characteristics of the index.

Physically Backed: securities held by the fund are the actual securities not a derivative.

Rebalance: An index is created by applying a certain set of selection and weighting rules of countries, sectors and stocks at a certain frequency. A Rebalance is when WisdomTree re-applies its rules based selection and weighting process.

Rebalance Frequency: The frequency by which the constituents of the index are screened and their weights changed.

Replication Method: the method by which the fund gets exposure to the benchmark index.

Share class currency or the "NAV currency": The currency that the fund's NAV is issued in.

Total Expense Ratio (TER): A measure of the total costs associated with managing and operating a fund. The TER consists primarily of management fees plus other expenses such as trustee, custody and operating expenses. It does not cover the swap fee. The TER is expressed as a percentage of the fund's total net asset value.
