### Key Risks

The value of your investment may go down as well as up and past performance does not predict future returns. Investor capital may be at risk up to a total loss. Bonds are exposed to credit risk and interest rate risk. There is a risk that the bond issuer may be unable to pay interest or repay the bond principal, resulting in your investment suffering a loss. If interest rates rise, typically the value of the bond will fall, which could also affect the value of your investment. The Fund will enter into a derivative with a counterparty. If the counterparty fails to make payments (for example, it becomes insolvent) this may result in your investment suffering a loss.

The Fund invests in non-investment grade bonds which generally have a higher risk of default and are more susceptible to market fluctuations. This could adversely affect the value of your investment.

The fund has a scheduled maturity date, there is no guarantee this will be met. There is no guarantee that any specific redemption amount will be returned to investors at maturity, the redemption amount may be below the initial purchase amount, and investors should be able to sustain losses up to the total investment amount.

On the final day of the Initial Maturity Window, the Reference Index will roll into the next maturity window, investing in high yield corporate bonds that mature 3 years after the Initial Maturity Window - between 1 October 2029 and 30 September 2030 (the "Subsequent Maturity Window"). On the final day of the Subsequent Maturity Window, the Reference Index will then roll again into the next maturity window, and this roll will repeat every 3 years in perpetuity on the final day of every maturity window.
