

31/10/2025 | MONTHLY REPORT | SHARE CLASS W (EUR)

# Allianz European Equity Dividend

## Investment team

**Grant Cheng**  
(since 01/06/2022)

**Andrew Koch**  
(since 08/07/2024)

## Investment objective

The fund concentrates on European stocks with the prospect of adequate dividends. The fund has a specific focus on GHG emissions intensity to contribute to shaping a lower carbon economy/society. The investment objective is to achieve long-term capital growth.

## Performance (basis EUR, net of fees) <sup>1</sup>

Period (annual)	% Fund	% BM	Period	% Fund	% BM
31/10/15 - 31/10/16	-2.05	-6.76	1 month	2.82	2.56
31/10/16 - 31/10/17	15.11	19.52	3 months	3.39	5.39

OPPORTUNITIES AND RISKS

Opportunities

- Over the long run stocks usually give higher returns than other assets
- Dividend stocks have historically outperformed over the long run
- Investments focused in European stock markets
- Portfolio broadly diversified across industries and companies
- Managers focused on stock analysis, aiming to increase returns
- Investments filtered for sustainability, to ensure long term business viability

Risks

- Shares can be volatile investments and losses are possible. The fund unit prices will reflect the volatility of the underlying investments
- Dividend stocks do not outperform at all times
- European stock markets may give different returns to other stock markets
- Stock analysis and active management is not guaranteed to outperform the broad market
- By focusing on sustainability the investment universe is narrowed

SUSTAINABILITY GLOSSARY

Carbon footprint

Carbon footprint is the sum of greenhouse gas emissions, measured in CO2 equivalents, for a specified entity, e.g., a company, the life cycle or partial life cycle of a product, or a service. A lower carbon footprint can be achieved through the use of renewable energy and efficient use of resources. A carbon footprint of zero is said to be carbon neutral which implies either there are no greenhouse gas emissions, or any carbon causing activities are offset by environmental activities to counter tackle carbon emissions, e.g., reforestation activities.

Engagement

Engagement refers to interactions between an investor and a corporate or policy makers to improve corporate practices and disclosure of information at an industry or market level. The objective of engagement is exercising influence over a company's practices and performance (not limited to ESG issues). A company engagement dialogue generally encompasses a range of topics.

Proportion of sustainable investments

We have developed a proprietary method for measuring sustainable investment (as defined in the SFDR). For this, we assess the positive contribution of a company to environmental or social objectives (using the SDGs or the EU taxonomy objectives as reference frameworks). We base this assessment on specific business activities. For the assessment we combine qualitative and quantitative elements using external data providers but also our own research. Moreover, we consider certain types of securities, which have been issued to finance specific projects contributing to environmental or social objectives (for instance Green Bonds). Once we have identified a positive contribution to an environmental or social objective, we assess the investee company in order to avoid overall violations – the so called “do no significant harm test”. For this we use the principal adverse impact indicators (PAI). Furthermore, we ensure that the company complies with good corporate governance standards. Only when these three criteria are fulfilled, do we count the positive contribution into our sustainable investment share of the fund. This ensures that investors can expect a detailed analysis and a robust methodology.

SFDR category

Sustainability category according to European Union Sustainable Finance Disclosure Regulation. This sustainability category depends on specific requirements as defined by the regulator. Reference regulation: Regulation (EU) 2019/2088

### Green bonds

Green bonds are bonds where the proceeds finance dedicated projects that have measurable environmental benefits, tackling issues such as: renewable energy, energy efficiency, clean buildings, clean transportation, water and waste management. The Green Bond Principles are voluntary process guidelines that recommend transparency and disclosure and promote integrity in the development of the Green Bond market by clarifying the approach for issuance of a Green Bond.

### Principal Adverse Impacts

Impacts of investment decisions that result in negative effects on sustainability factors, e.g., environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters (as defined in the SFDR). Since March 2021, asset managers need to disclose how they take into account Principal Adverse Impacts (PAI) in the investment process. A list of PAI indicators and metrics that are considered to have a negative impact has been defined and includes 14 indicators applicable to corporate issuers, and two applicable to sovereigns and supranationals. At AllianzGI, we have developed measures to consider PAIs in the investment process of our sustainable mutual funds.

### Taxonomy

The taxonomy is a European regulation that builds a common European classification system for environmentally sustainable activities. The taxonomy tries to answer the question: What can be considered an environmentally sustainable activity? The taxonomy defines six environmental objectives:

1. Climate change mitigation,
  2. Climate change adaptation,
  3. The sustainable use and protection of water and marine resources,
  4. The transition to a circular economy,
  5. Pollution prevention and control, and
  6. The protection and restoration of biodiversity and ecosystems.
- To qualify as sustainable and align with the taxonomy, an activity must make a substantial contribution to one of the six environmental objectives, do no significant harm (DNSH) to the other environmental objectives, and comply with minimum safeguards. Besides the European taxonomy, other regions and jurisdictions have also developed or are in the process of developing taxonomies.

### Weighted average carbon intensity

The carbon intensity of the portfolio, determined by measuring the volume of carbon emissions per dollar of sales generated by portfolio companies (tons CO<sub>2</sub>/USD mn owned revenue). When used in other contexts and other industries, the denominator of this fraction may be other factors, e.g., for a company in the property sector, tons CO<sub>2</sub>/square meter of property managed.

## Footnotes

- 1) Calculated at the net asset value, excl. front-end load, distributions reinvested. Calculation according to method as defined by BVI, the German Fund Companies Association. Past performance is not a reliable indicator of future results. Any front-end loads reduce the capital employed and the performance. These figures refer to the past. If the currency of a financial product, financial service or its costs is different from your reference currency, the return and/or costs can increase or decrease as a result of currency fluctuations. Source for all data and chart (if not indicated otherwise): IDS GmbH.
- 2) Morningstar Rating: © 2007 Morningstar, Inc., all rights reserved. The information given here: (1) is protected by copyright for Morningstar and/or its content providers; (2) may not be reproduced or distributed; and (3) is not guaranteed to be accurate, complete or up-to-date. Morningstar and its content providers assume no responsibility for any losses or damage that result from any use of the information provided. Past performance is not a guarantee of future results. To determine the Morningstar Rating, funds of a comparable group in issue for at least three years are considered. The long-term performance serves as a basis, taking into account fees and risk. As a result, the funds are awarded stars, which are calculated monthly: Top 10%: 5 stars; next 22.5%: 4 stars; middle 35%: 3 stars; next 22.5%: 2 stars; flop 10%: 1 star. A ranking, rating or award is not an indicator of future performance and is subject to change over time. Rating as of: 30/09/2025
- 3) The Risk Indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. The categorization of a product is not guaranteed and may change in the future. Even the lowest category 1 does not mean a risk-free investment
- 4) The all-in fee covers the fees formerly designated as management, administration and distribution fee. A potential payment of a trail fee from the management company to the distribution partner would be taken out of the all-in fee.
- 5) Total Expense Ratio (TER): Total cost (except transaction costs) charged to the fund during the last financial year. TER for funds-of-funds: The costs incurred by the fund itself (except transaction costs). Since the fund held other investment units ("target funds") in the reporting period, further costs, charges and fees may have been incurred at the level of the target fund.
- 6) The dividend yield is equivalent to expected dividend payments divided by the actual share price and is expressed as a percentage. (eDiv/share price), with eDiv = product of the last dividend payment and the number of expected dividend payments per year (for example, the expected dividend for a share with quarterly dividend payments is equivalent to the dividend paid for the past quarter times four). The dividend yield depends on both the dividend amount and the current share price, with both of these factors constantly changing. The dividend yield is only a transitory variable, which is based on the current dividend amount and the current share price. Therefore, it does not predict the future returns of an equity fund.
- 7) Measure of the proportion of fund assets that is invested differently from the benchmark.
- 8) Alpha is a measure of a portfolio's excess return relative to its expected return based on its risk level. It represents the value added (or subtracted) by a portfolio manager beyond what is explained by market movements.
- 9) Tracking error is the difference in actual performance between the portfolio and its corresponding benchmark. The tracking error can be also considered as an indicator of how actively a fund is managed and its corresponding risk level. It is measured as standard deviation of the portfolio's excess returns over the benchmark.
- 10) The Information Ratio (IR) is a measure of a portfolio manager's ability to generate excess returns relative to a benchmark, adjusted for risk.
- 11) Volatility measures the fluctuation range of the fund's performance over a specified period of time
- 12) The Sharpe ratio states the relationship between the return generated by the fund and the investment risk. The fund's excess return versus the risk-free market rate is compared to volatility. Negative values are not meaningful.
- 13) This is for guidance only and not indicative of future allocation.
- 14) The Global Industry classification standard "GICS" was developed by and is exclusive property and service mark of MSCI Inc. ("MSCI") And Standard & Poor's division of the McGraw-Hill Companies. Inc. ("S&P") and is licensed for use by (Licensee) neither MSCI, S&P nor any third part involved in making or compiling the GICS or any GICS classifications makes any express or implied warranties or representations with respect to such standard or classification (or the results to be obtained by the use of thereof) and all such parties hereby expressly disclaim all warranties of originalty, accuracy, completeness, merchantability, and fitness for a particular purpose with respect to any og such standard or classification. Without limiting any of the foregoing in no event shall MSCI, S&P or any of their affiliates or any third party involved in makiking or compiling the GICS or any GICS classifications have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibilities of such damages.
- 15) This fund has been classified as an Article 8 under SFDR: EU Sustainable Finance Disclosure Regulation. Information accurate at time of publishing. Investors should take into account all the characteristics and/ or objectives of the fund as described in its prospectus and Key Investor Document (regulatory.allianzgi.com).
- 16) A ranking, a rating or an award provides no indicator of future performance and is not constant over time.
- 17) This disclosure was developed using information from MSCI ESG Research LLC or its affiliates or information providers. Although AllianzGI information providers, including without limitation, MSCI ESG Research LLC and its affiliates (the "ESG Parties"), obtain information (the "Information") from sources they consider reliable, none of the ESG Parties warrants or guarantees the originality, accuracy and/or completeness, of any data herein and expressly disclaim all express or implied warranties, including those of merchantability and fitness for a particular purpose. The Information may only be used for your internal use, may not be reproduced or disseminated in any form and may not be used as a basis for, or a component of, any financial instruments or products or indices. Further, none of the Information can in and of itself be used to determine which securities to buy or sell or when to buy or sell them. None of the ESG Parties shall have any liability for any errors or omissions in connection with any data herein, or any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.
- 18) Sustainability Rating as of 31/08/2025. Sustainability provides company-level analysis used in the calculation of Morningstar's Historical Sustainability Score. © 2007 Morningstar.
