- The actual Sustainable Investment share at the end of the financial year was 47.5 %.

- The actual percentage of investments that pass the assessment to significantly harm environmental or social objectives at the end of the financial year was 4.95 %.

- ... and compared to previous periods?

On 28.09.2023, the sustainable investment approach was changed from the Climate Engagement with Outcome (CEWO) to another E/S Strategy (KPI Strategy - Absolute Threshold). The indicators for measuring compliance with ecological and social characteristics between the investment approaches are only partially comparable. If the indicators for the CEWO are not comparable, they are not included in the table. For information on the performance of the strategy, please refer to the 2023 year-end report (available upon request).

Indicator	09.2025	09.2024	09.2023
The actual percentage of assets invested in issuers which have been assessed according to the Sustainable Investments methodology at the end of the financial year was	97.91%	98.23%	95.35%
The actual weighted average sustainable investment share of Sub-Fund Assets was	47.5%	47.7%	38.11%
The actual percentage of investments that pass the assessment to not significantly harm environmental or social objectives at the end of the financial year was	4.95%	2.96%	5.15%
The response rate (companies replied to the engagement questionnaire) was*	-	-	88%
Change of the carbon footprint**	-	-	-5.6%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

* The top 10 carbon emitting issuers are determined periodically. Over the reference dates Q4/2020, Q1/2022 and Q1/2023 the 17 emitters were identified.

** Change of the CO2 emissions of the year 2019 compared to 2021.

All investments in sovereign issuers were evaluated with an SRI rating until the sustainable investment approach was changed.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
ASR NEDERLAND NV	FINANCIAL AND INSURANCE ACTIVITIES	2.92 %	Netherlands
STOREBRAND ASA	FINANCIAL AND INSURANCE ACTIVITIES	2.81 %	Norway
ELIS SA	OTHER SERVICE ACTIVITIES	2.67 %	France

BE SEMICONDUCTOR INDUSTRIES	MANUFACTURING	1.98 %	Netherlands
BANK OF IRELAND GROUP PLC	FINANCIAL AND INSURANCE ACTIVITIES	1.96 %	Ireland
HOWDEN JOINERY GROUP PLC	MANUFACTURING	1.96 %	United Kingdom
LEG IMMOBILIEN SE	REAL ESTATE ACTIVITIES	1.93 %	Germany

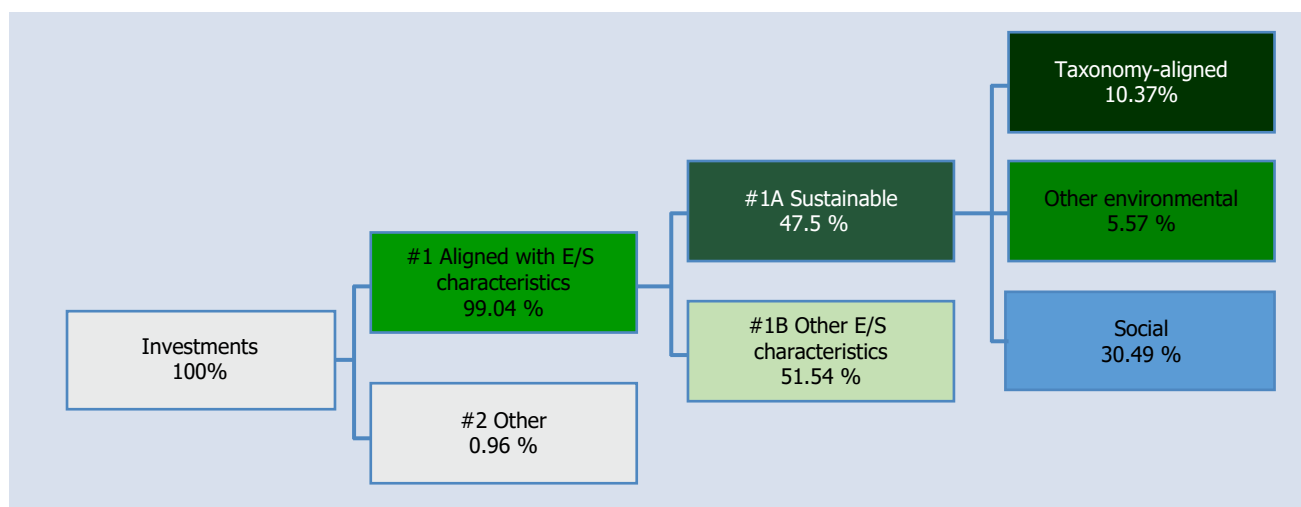

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	2.09 %
B09	Mining support service activities	2.09 %
C	MANUFACTURING	42.10 %
C10	Manufacture of food products	2.96 %
C17	Manufacture of paper and paper products	0.60 %
C20	Manufacture of chemicals and chemical products	2.36 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	1.83 %
C22	Manufacture of rubber and plastic products	2.16 %
C23	Manufacture of other non-metallic mineral products	1.08 %
C24	Manufacture of basic metals	6.36 %
C26	Manufacture of computer, electronic and optical products	5.41 %
C27	Manufacture of electrical equipment	1.51 %

C28	Manufacture of machinery and equipment n.e.c.	13.39 %

N80	Security and investigation activities	0.97 %

N81	Services to buildings and landscape activities	1.61 %
O	PUBLIC ADMINISTRATION AND DEFENCE; COMPULSORY SOCIAL SECURITY	0.78 %
O84	Public administration and defence; compulsory social security, from which:	0.78 %
O84.1	Administration of the State and the economic and social policy of the community	0.78 %
S	OTHER SERVICE ACTIVITIES	2.54 %
S96	Other personal service activities	2.54 %
Other	NOT SECTORIZED	0.76 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0.78 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Climate change mitigation	10.49 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	2.24 %
Enabling activities	2.14 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	10.37 %	5.23 %	3.75 %
Capex	9.73 %	4.95 %	0 %
Opex	8.83 %	4.64 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	10.45 %	5.25 %	3.76 %
Capex	9.81 %	4.96 %	0 %
Opex	8.9 %	4.65 %	0 %

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 5.57% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 30.49% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz European Equity Dividend

Legal entity identifier: 549300XUMQIJXEX2O502

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 58.73% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz European Equity Dividend (the "Sub-Fund") promoted environmental and social characteristics as well as the reduction of greenhouse gas ("GHG") intensity. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed investments (excluded cash and derivatives) according to the greenhouse gas ("GHG") emissions of investee companies as far as such data was available. Based on this, the Investment Manager managed the Sub-Fund so that the GHG intensity of the portfolio declines over time. The basis for assessing the decline was a GHG intensity target set for the respective end of the Sub-Fund's financial year. GHG intensity was defined as GHG emissions (scope 1 and 2) per million USD sales of the issuer. GHG emissions per million USD sales was used, as this metrics allows to differentiate between more and less energy efficient issuers. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio GHG intensity data must be available.
- Further, the Investment Manager adhered to a minimum percentage of 10.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does

this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio which is covered by GHG intensity data was 99.54 %. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual GHG intensity of the Sub-Fund's portfolio compared to the GHG target set under the GHG intensity pathway for the end of the relevant financial year was 19.37 %. The calculation of the GHG intensity is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **... and compared to previous periods?**

On 29.12.2022, the sustainable investment approach was changed from the Climate Engagement with Outcome (CEWO) to another E/S Strategy (KPI Strategy - Absolute). The indicators for measuring compliance with ecological and social characteristics between the investment approaches are only partially comparable. If the indicators for the CEWO are not comparable, they are not included in the table. For information on the performance of the strategy, please refer to the 2022 year-end report (available upon request).

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio which is covered by GHG intensity data was	99.54%	98.11%	97.23%
The actual GHG intensity of the Sub-Fund's portfolio compared to the GHG target set under the GHG intensity pathway for the end of the relevant financial year was	19.37%	9.14%	16.57%
The response rate (companies replied to the engagement questionnaire) was*	-	-	100%
Change of the carbon footprint**	-	-	6.6%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

* The top 10 carbon emitting issuers are determined periodically. Over the two reference dates Q4/2020 and Q1/2022 the 13 emitters were identified.

** Change of the CO2 emissions of the year 2019 compared to 2021.

All investments in sovereign issuers were evaluated with an SRI rating until the sustainable investment approach was changed.

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
SIEMENS AG-REG	MANUFACTURING	4.34 %	Germany
ROCHE HOLDING AG-GENUSSCHEIN	MANUFACTURING	3.53 %	USA
TOTALENERGIES SE	MANUFACTURING	3.39 %	France
KBC GROUP NV	FINANCIAL AND INSURANCE ACTIVITIES	3.24 %	Belgium
MUENCHENER RUECKVER AG-REG	FINANCIAL AND INSURANCE ACTIVITIES	3.19 %	Germany
VOLVO AB-B SHS	MANUFACTURING	3.11 %	Sweden
NORDEA BANK ABP	FINANCIAL AND INSURANCE ACTIVITIES	3.11 %	Finland
SANOFI	MANUFACTURING	3.06 %	USA
GSK PLC	MANUFACTURING	2.99 %	USA
NESTLE SA-REG	MANUFACTURING	2.92 %	USA
UNILEVER PLC	MANUFACTURING	2.67 %	United Kingdom
IBERDROLA SA	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	2.65 %	Spain
AENA SME SA	TRANSPORTATION AND STORAGE	2.53 %	Spain
AXA SA	FINANCIAL AND INSURANCE ACTIVITIES	2.48 %	France
LLOYDS BANKING GROUP PLC	FINANCIAL AND INSURANCE ACTIVITIES	2.43 %	United Kingdom

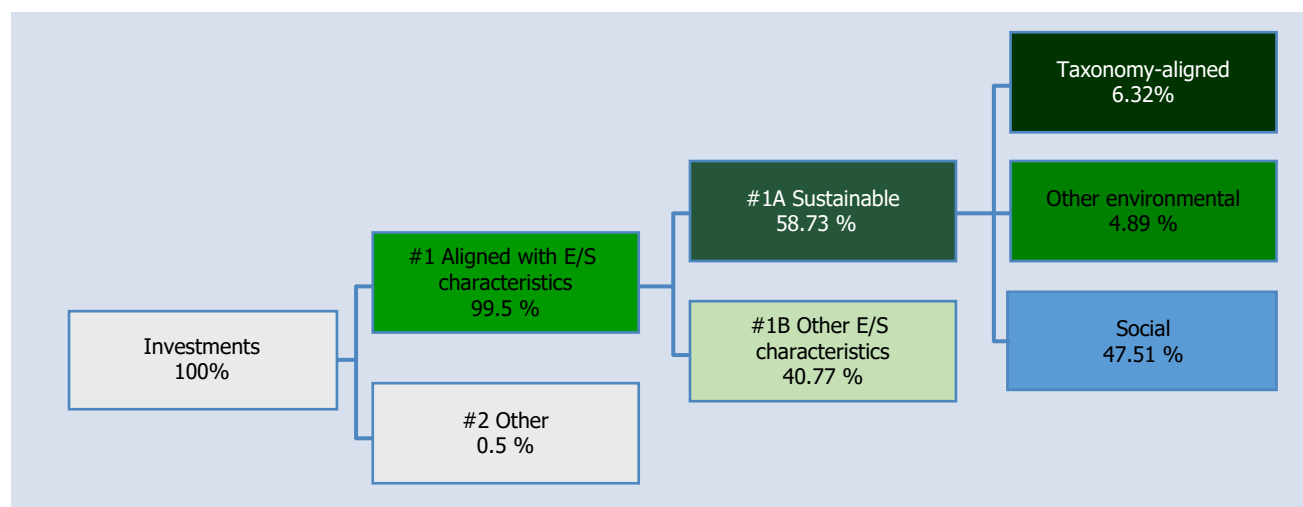

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	3.46 %
B07	Mining of metal ores	3.46 %
C	MANUFACTURING	43.97 %
C10	Manufacture of food products	3.54 %
C11	Manufacture of beverages	2.64 %
C17	Manufacture of paper and paper products	1.89 %
C19	Manufacture of coke and refined petroleum products	3.14 %
C20	Manufacture of chemicals and chemical products	6.38 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	11.08 %
C22	Manufacture of rubber and plastic products	2.19 %
C27	Manufacture of electrical equipment	6.13 %
C28	Manufacture of machinery and equipment n.e.c.	1.92 %

C29	Manufacture of motor vehicles, trailers and semi-trailers	4.68 %
C32	Other manufacturing	0.38 %
D	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	2.70 %
D35	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	2.70 %
E	WATER SUPPLY; SEWERAGE, WASTE MANAGEMENT AND REMEDIATION ACTIVITIES	2.14 %
E37	Sewerage	2.14 %
F	CONSTRUCTION	1.30 %
F41	Construction of buildings	1.30 %
F42	Civil engineering	0.00 %
G	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	7.54 %
G46	Wholesale trade, except of motor vehicles and motorcycles	5.29 %
G47	Retail trade, except of motor vehicles and motorcycles	2.25 %
H	TRANSPORTATION AND STORAGE	4.24 %
H49	Land transport and transport via pipelines	0.00 %
H52	Warehousing and support activities for transportation	2.10 %
H53	Postal and courier activities	2.13 %

I55	Accommodation	2.13 %
I56	Food and beverage service activities	1.03 %
J	INFORMATION AND COMMUNICATION	1.78 %
J61	Telecommunications	1.78 %
J62	Computer programming, consultancy and related activities	0.00 %
K	FINANCIAL AND INSURANCE ACTIVITIES	26.44 %
K64	Financial service activities, except insurance and pension funding	17.57 %
K65	Insurance, reinsurance and pension funding, except compulsory social security	9.09 %
K66	Activities auxiliary to financial services and insurance activities	-0.22 %
M	PROFESSIONAL, SCIENTIFIC AND TECHNICAL ACTIVITIES	2.47 %
M73	Advertising and market research	2.47 %
N	ADMINISTRATIVE AND SUPPORT SERVICE ACTIVITIES	0.00 %
N77	Rental and leasing activities	0.00 %
O	PUBLIC ADMINISTRATION AND DEFENCE; COMPULSORY SOCIAL SECURITY	0.08 %
O84	Public administration and defence; compulsory social security, from which:	0.08 %
O84.1	Administration of the State and the economic and social policy of the community	0.08 %
Other	NOT SECTORIZED	0.71 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0.08 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	5.89 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.03 %
Enabling activities	3.63 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	6.32 %	4.32 %	3.11 %
Capex	8.08 %	6.36 %	0 %
Opex	7.87 %	5.96 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	6.33 %	4.32 %	3.11 %
Capex	8.09 %	6.36 %	0 %
Opex	7.87 %	5.96 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 4.89% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 47.51% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Flexi Asia Bond

Legal entity identifier: 549300C83822MBOOH659

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 36.09% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Flexi Asia Bond (the "Sub-Fund") promoted environmental and social characteristics as well as the management of greenhouse gas ("GHG") intensity. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed investments (excluded cash and derivatives) according to the greenhouse gas ("GHG") emissions of investee companies as far as such data was available. Based on this, the Investment Manager managed the Sub-Fund in a way that the GHG intensity of the portfolio was 20.00% lower than the GHG intensity of the Sub-Fund's benchmark. GHG intensity was defined as GHG emissions (scope 1 and 2) per million USD sales of the issuer. GHG emissions per million USD sales was used, as this metrics allows to differentiate between more and less energy efficient issuers. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio GHG intensity data must be available.
- Further, the Investment Manager adhered to a minimum percentage of 2.50% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

A reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund 's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio which is covered by GHG intensity data was 78.41 %. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual GHG intensity of the Sub-Fund's portfolio was 59.31 % lower than the GHG intensity of the benchmark at the relevant financial year. The calculation of the GHG intensity is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio which is covered by GHG intensity data was	78.41%	75.14%	80.43%
The actual average GHG intensity of the Sub-Fund's portfolio vs average GHG intensity of the benchmark was lower by	59.31%	49.05%	61.21%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
A	AGRICULTURE, FORESTRY AND FISHING	0.92 %
A01	Crop and animal production, hunting and related service activities	0.92 %
B	MINING AND QUARRYING	3.71 %
B06	Extraction of crude petroleum and natural gas	2.63 %

R92	Gambling and betting activities	3.54 %
Other	NOT SECTORIZED	5.95 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 8.53 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Climate change mitigation	0.32 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	0.32 %	0.39 %	0.42 %
Capex	0 %	0 %	0 %
Opex	0 %	0 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	0.35 %	0.43 %	0.48 %
Capex	0 %	0 %	0 %
Opex	0 %	0 %	0 %

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 9.18% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 26.58% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI 's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Investment Manager has assigned the index "J.P. MORGAN JACI Composite Total Return" as the Sub-Fund's benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by managing the GHG intensity so that it will be continuously 20% lower than the GHG intensity of the benchmark as described in the section "What investment strategy does this financial product follow?".

- **How did the reference benchmark differ from a broad market index?**

The Sub-Fund's benchmark is a market index.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The actual GHG intensity of the Sub-Fund's portfolio was 59.31 % lower than the GHG intensity of the benchmark at the relevant financial year end. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **How did this financial product perform compared with the reference benchmark?**

01/10/2024 - 30/09/2025	Allianz Flexi Asia Bond	Benchmark	Active Return
Performance %	4.08	5.44	-1.36

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did this financial product perform compared with the broad market index?

01/10/2024 - 30/09/2025	Allianz Flexi Asia Bond	Benchmark	Active Return
Performance %	4.08	5.44	-1.36

Product name:

Allianz Floating Rate Notes Plus

Legal entity identifier: 549300MEQ2M0QYJV6F90

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 46.98% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Floating Rate Notes Plus (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- Further, the Investment Manager adhered to a minimum percentage of 3.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does

this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The actual percentage of the portfolio with a proprietary sustainability score of 2 or more was 98.85 % at the financial year end. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- **... and compared to previous periods?**

On 29.12.2022, the sustainable investment approach was changed from the Climate Engagement with Outcome (CEWO) to another E/S Strategy (SRI BIC). The indicators for measuring compliance with ecological and social characteristics between the investment approaches are only partially comparable. If the indicators for the CEWO are not comparable, they are not included in the table. For information on the performance of the strategy, please refer to the 2022 year-end report (available upon request).

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a proprietary sustainability score was	98.85%	94.05%	92.71%
The response rate (companies replied to the engagement questionnaire) was*	-	-	85%
Change of the carbon footprint**	-	-	-23.1%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

* The top 10 carbon emitting issuers are determined periodically. Over the two reference dates Q4/2020 and Q1/2022 the 13 emitters were identified.

** Change of the CO2 emissions of the year 2019 compared to 2021.

All investments in sovereign issuers were evaluated with an SRI rating until the sustainable investment approach was changed.

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	4.82 %
C10	Manufacture of food products	0.21 %
C11	Manufacture of beverages	0.10 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.17 %
C27	Manufacture of electrical equipment	0.72 %
C29	Manufacture of motor vehicles, trailers and semi-trailers	3.63 %
D	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	4.00 %
D35	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	4.00 %
E	WATER SUPPLY; SEWERAGE, WASTE MANAGEMENT AND REMEDIATION ACTIVITIES	0.14 %
E37	Sewerage	0.14 %

N77	Rental and leasing activities	1.83 %
O	PUBLIC ADMINISTRATION AND DEFENCE; COMPULSORY SOCIAL SECURITY	10.82 %
O84	Public administration and defence; compulsory social security, from which:	10.82 %
O84.1	Administration of the State and the economic and social policy of the community	10.82 %
Other	NOT SECTORIZED	2.79 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 10.82 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	3.01 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.50 %
Enabling activities	0.60 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	3.06 %	1.5 %	0.86 %
Capex	3.72 %	2.62 %	0 %
Opex	1.48 %	2.11 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	3.43 %	1.76 %	1.09 %
Capex	4.17 %	3.07 %	0 %
Opex	1.66 %	2.47 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 6.7% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 36.77% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Food Security

Legal entity identifier: 5299001E4VA6IBICG293

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 63.15% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Food Security (the "Sub-Fund") promoted environmental and social characteristics and one or more of the United Nations Sustainable Development Goals ("SDGs") or other Sustainable Investment objectives. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe mainly those issuers providing products or services suitable to facilitate positive environmental and social contributions. Environmental or social contributions include a broad range of topics, for which the Investment Manager used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the EU Taxonomy objectives. The proprietary methodology to assess the environmental and social contribution was described in the section "What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?" and contained an assessment of the positive contribution to environmental and social contributions as well as an assessment to avoid significant harm to any environmental or social objective.
- Further, the Investment Manager adhered to a minimum percentage of 50.00% of Sustainable Investments.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the sustainable investment objective the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 10% of their revenue from thermal coal extraction,

- active within the utility sector and generating more than 20% of their revenues from coal,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual Sustainable Investment share at the end of the financial year was 63.15 %.

- At least 70% of the Sub-Fund's net asset value has been invested throughout the SubFund's financial year in issuers that pursue business activities that contribute to one or more of the following SDGs: Zero Hunger; Good Health and Well-being; Clean Water and Sanitation; Climate Action; Life Below Water; Life on Land.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual Sustainable Investment share at the end of the financial year was	63.15 %	71.74 %	80.69 %
Confirmation on SDG aligned investments	At least 70% of the Sub-Fund's net asset value has been invested throughout the SubFund's financial year in issuers that pursue business activities that contribute to one or more of the following SDGs: Zero Hunger; Good Health and Well-being; Clean Water and Sanitation; Climate Action; Life Below Water; Life on Land.		
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Share of non-renewable energy consumption and production
- Activities negatively affecting biodiversity-sensitive areas
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Unadjusted gender pay gap
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- GHG intensity
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
KERRY GROUP PLC-A	MANUFACTURING	3.15 %	Ireland

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
A	AGRICULTURE, FORESTRY AND FISHING	1.50 %
A01	Crop and animal production, hunting and related service activities	0.48 %
A03	Fishing and aquaculture	1.03 %
C	MANUFACTURING	49.76 %
C10	Manufacture of food products	12.20 %
C11	Manufacture of beverages	4.13 %
C20	Manufacture of chemicals and chemical products	5.33 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	5.31 %
C22	Manufacture of rubber and plastic products	0.77 %
C25	Manufacture of fabricated metal products, except machinery and equipment	3.78 %
C26	Manufacture of computer, electronic and optical products	6.47 %
C27	Manufacture of electrical equipment	1.44 %

C28	Manufacture of machinery and equipment n.e.c.	10.34 %
E	WATER SUPPLY; SEWERAGE, WASTE MANAGEMENT AND REMEDIATION ACTIVITIES	3.86 %
E36	Water collection, treatment and supply	1.59 %
E38	Waste collection, treatment and disposal activities; materials recovery	2.28 %
G	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	18.79 %
G46	Wholesale trade, except of motor vehicles and motorcycles	10.48 %
G47	Retail trade, except of motor vehicles and motorcycles	8.31 %
I	ACCOMMODATION AND FOOD SERVICE ACTIVITIES	2.85 %
I56	Food and beverage service activities	2.85 %
J	INFORMATION AND COMMUNICATION	4.04 %
J58	Publishing activities	3.06 %
J62	Computer programming, consultancy and related activities	0.98 %
K	FINANCIAL AND INSURANCE ACTIVITIES	5.99 %
K64	Financial service activities, except insurance and pension funding	2.25 %
K65	Insurance, reinsurance and pension funding, except compulsory social security	1.75 %
K66	Activities auxiliary to financial services and insurance activities	2.00 %
L	REAL ESTATE ACTIVITIES	1.33 %
L68	REAL ESTATE ACTIVITIES	1.33 %
M	PROFESSIONAL, SCIENTIFIC AND TECHNICAL ACTIVITIES	5.88 %
M71	Architectural and engineering activities; technical testing and analysis	1.33 %
M72	Scientific research and development	3.76 %
M73	Advertising and market research	0.80 %
R	ARTS, ENTERTAINMENT AND RECREATION	1.27 %
R93	Sports activities and amusement and recreation activities	1.27 %
Other	NOT SECTORIZED	4.73 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

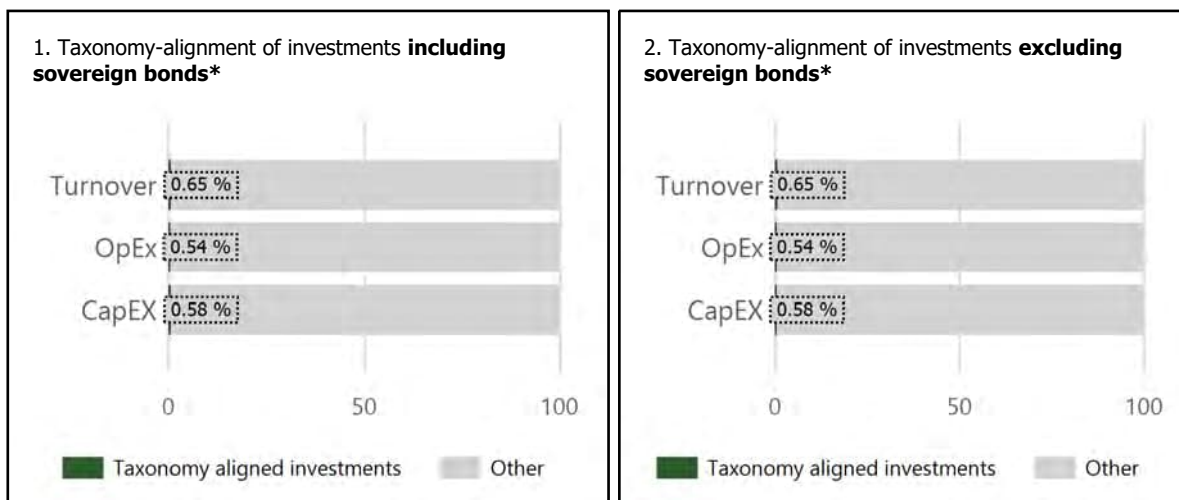

Yes

In fossil gas In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.64 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.53 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	0.65 %	0.53 %	0.18 %
Capex	0.58 %	1.33 %	0 %
Opex	0.54 %	0.57 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	0.65 %	0.53 %	0.18 %
Capex	0.58 %	1.33 %	0 %
Opex	0.54 %	0.57 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 4.95% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 57.55% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager’s engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI’s strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI’s holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Product name:

Allianz German Equity

Legal entity identifier: 529900TEU4JD3HNC2746

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 57.54% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz German Equity (the "Sub-Fund") promoted environmental and social characteristics as well as the management of greenhouse gas ("GHG") intensity. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluded direct and indirect investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed investments (excluded cash and derivatives) according to the greenhouse gas ("GHG") emissions of investee companies as far as such data was available. Based on this, the Investment Manager managed the Sub-Fund in a way that the GHG intensity of the portfolio was 30.00% lower than the GHG intensity of the Sub-Fund's benchmark. GHG intensity was defined as GHG emissions (scope 1 and 2) per million USD sales of the issuer. GHG emissions per million USD sales was used, as this metrics allows to differentiate between more and less energy efficient issuers. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio GHG intensity data must be available.
- Further, the Investment Manager adhered to a minimum percentage of 15.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

A reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund 's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco,
- deriving more than 10% of their revenues from the production of energy from fossil fuels or other use of fossil fuels, excluding natural gas,
- deriving more than 10% of their revenues from the extraction of petroleum,
- deriving more than 10% of their revenues from oil sands, oil shale mining, exploration, and services.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio which is covered by GHG intensity data was 99.01 %. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual GHG intensity of the Sub-Fund's portfolio was 60.73 % lower than the GHG intensity of the benchmark at the relevant financial year. The calculation of the GHG intensity is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **... and compared to previous periods?**

On 29.12.2022, the sustainable investment approach was changed from the Climate Engagement with Outcome (CEWO) to another E/S Strategy (KPI Strategy - Relative). The indicators for measuring compliance with ecological and social characteristics between the investment approaches are only partially comparable. If the indicators for the CEWO are not comparable, they are not included in the table. For information on the performance of the strategy, please refer to the 2022 year-end report (available upon request).

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio which is covered by GHG intensity data was	99.01%	98.93%	98.36%
The actual average GHG intensity of the Sub-Fund's portfolio vs average GHG intensity of the benchmark was lower by	60.73%	45.29%	25.6%
The response rate (companies replied to the engagement questionnaire) was*	-	-	100%
Change of the carbon footprint**	-	-	5.2%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

* The top 10 carbon emitting issuers are determined periodically. Over the two reference dates Q4/2020 and Q1/2022 the 13 emitters were identified.

** Change of the CO2 emissions of the year 2019 compared to 2021.

All investments in sovereign issuers were evaluated with an SRI rating until the sustainable investment approach was changed.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
SIEMENS AG-REG	MANUFACTURING	9.33 %	Germany
SAP SE	INFORMATION AND COMMUNICATION	9.05 %	Germany
DEUTSCHE BOERSE AG	FINANCIAL AND INSURANCE ACTIVITIES	6.96 %	Germany
MUENCHENER RUECKVER AG-REG	FINANCIAL AND INSURANCE ACTIVITIES	6.47 %	Germany
INFINEON TECHNOLOGIES AG	MANUFACTURING	6.35 %	Germany
ALLIANZ SE-REG	FINANCIAL AND INSURANCE ACTIVITIES	4.71 %	Germany
MTU AERO ENGINES AG	MANUFACTURING	3.67 %	Germany
SCOUT24 SE	INFORMATION AND COMMUNICATION	3.23 %	Germany
STROEER SE & CO KGAA	PROFESSIONAL, SCIENTIFIC AND TECHNICAL ACTIVITIES	3.19 %	Germany

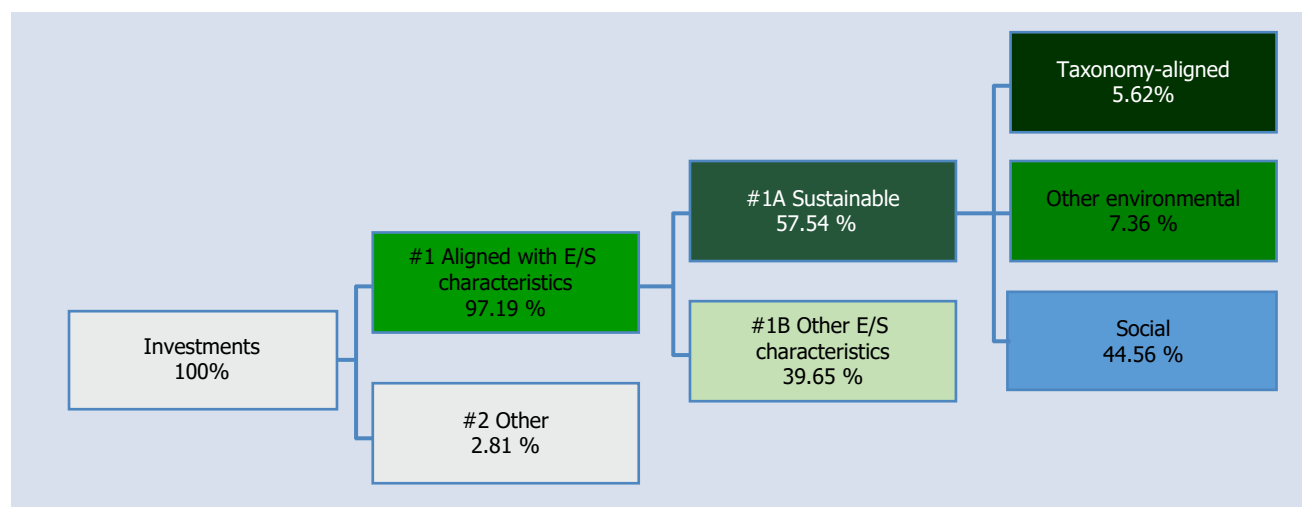

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	45.46 %
C10	Manufacture of food products	1.41 %
C15	Manufacture of leather and related products	1.25 %
C16	Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials	0.06 %

Other	NOT SECTORIZED	1.21 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

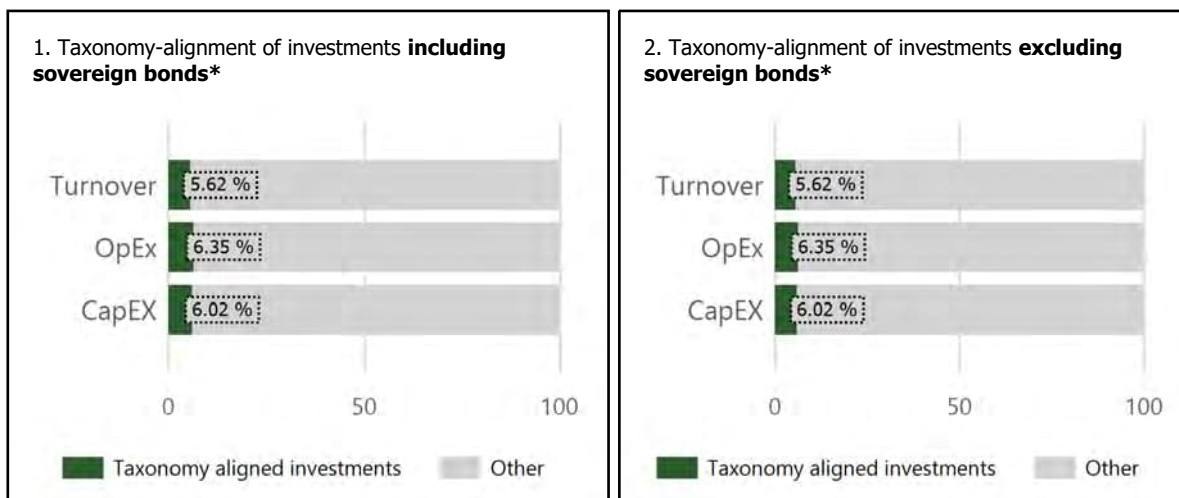

Yes

In fossil gas In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	4.18 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.66 %
Enabling activities	3.83 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	5.62 %	1.86 %	1.32 %
Capex	6.02 %	2.76 %	0 %
Opex	6.35 %	3.18 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	5.62 %	1.86 %	1.32 %
Capex	6.02 %	2.76 %	0 %
Opex	6.35 %	3.18 %	0 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 7.36% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 44.56% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Investment Manager has assigned the index "DAX UCITS Capped" as the Sub-Fund's benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by managing the GHG intensity so that it will be continuously 30% lower than the GHG intensity of the benchmark as described in the section "What investment strategy does this financial product follow?".

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did the reference benchmark differ from a broad market index?

The Sub-Fund's benchmark is a market index.

- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

The actual GHG intensity of the Sub-Fund's portfolio was 60.73 % lower than the GHG intensity of the benchmark at the relevant financial year end. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- How did this financial product perform compared with the reference benchmark?

01/10/2024 - 30/09/2025	Allianz German Equity	Benchmark	Active Return
Performance %	2.48	23.27	-20.79

- How did this financial product perform compared with the broad market index?

01/10/2024 - 30/09/2025	Allianz German Equity	Benchmark	Active Return
Performance %	2.48	23.27	-20.79

Product name:

Allianz Global Allocation Opportunities

Legal entity identifier: 529900RXE0R0Y4CT3A63

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 19.72% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Global Allocation Opportunities (the "Sub-Fund") promoted a broad range of environmental and social characteristics. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe direct investments which were selected with respect to sustainability aspects and other funds ("Target Funds") which promote environmental or social characteristics, or which had Sustainable Investments as an objective for at least 70% of the Sub-Fund's assets. Target Funds were counted into the 70% if they disclose according to Art 8 Sustainable Finance Disclosure Regulation ("SFDR") or Art 9 SFDR. Direct investments were counted into the 70% if they were managed according to another approach of the Investment Manager qualifying as Art 8 or 9 SFDR).
- Further, the Investment Manager adhered to a minimum percentage of 10.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the Sub-Fund's assets invested in direct investments which are selected with respect to sustainability aspects and Target Funds which promote environmental or social characteristics, or which have Sustainable Investments as an objective at the end of the financial year was 9.26 %. In case the Investment Manager decides to directly invest in Debt or Equity Securities which are selected with respect to sustainability aspects the adherence to the respective binding element will be reported.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024
The actual percentage of the Sub-Fund's assets invested in direct investments which are selected with respect to sustainability aspects and Target Funds which promote environmental or social characteristics, or which have Sustainable Investments as an objective at the end of the financial year was	9.26 %	43.82 %
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year	

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. The exclusion criteria did not apply to Target Funds managed by another Investment Manager and for Target Funds managed by the Investment Manager, but which did not promote environmental or social characteristics or did not have Sustainable Investments as an objective. The Investment Manager would limit this part of the Sub-Fund assets to 30%, so that the exclusion criteria applied to the majority of the Sub-Funds assets. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogeneous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 33.13 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

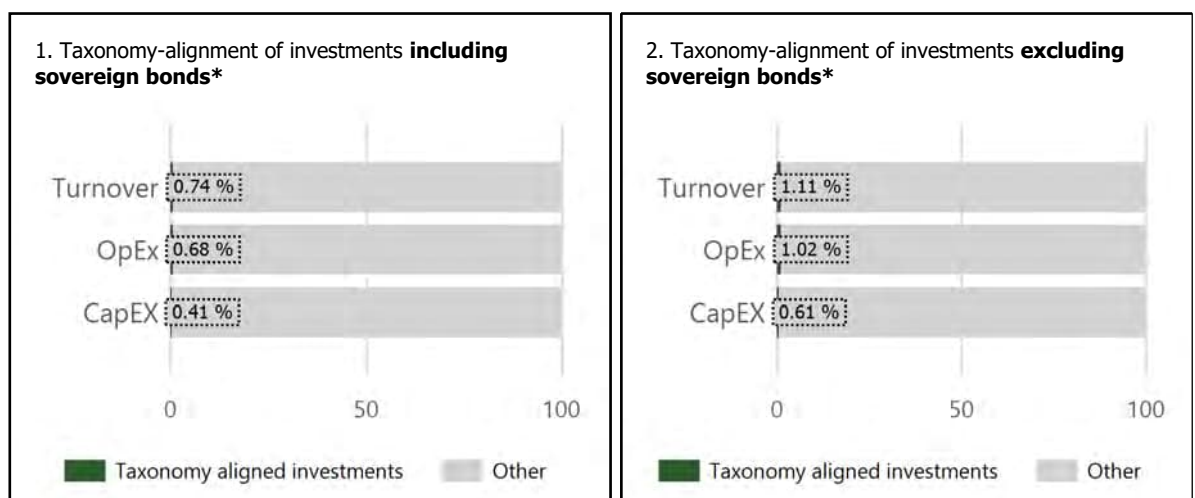

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Climate change mitigation	0.67 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.01 %
Enabling activities	0.27 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024
Turnover	0.74 %	0.17 %
Capex	0.41 %	0.26 %
Opex	0.68 %	0.2 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024
Turnover	1.11 %	0.28 %
Capex	0.61 %	0.43 %
Opex	1.02 %	0.33 %

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 4.41% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 14.56% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Global Artificial Intelligence

Legal entity identifier: 5299007Y9R7L3FEF1M54

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 62.21% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Global Artificial Intelligence (the "Sub-Fund") promoted environmental and social characteristics as well as the management of greenhouse gas ("GHG") intensity. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed investments (excluded cash and derivatives) according to the greenhouse gas ("GHG") emissions of investee companies as far as such data was available. Based on this, the Investment Manager managed the Sub-Fund in a way that the GHG intensity of the portfolio was 20.00% lower than the GHG intensity of the Sub-Fund's benchmark. GHG intensity was defined as GHG emissions (scope 1 and 2) per million USD sales of the issuer. GHG emissions per million USD sales was used, as this metrics allows to differentiate between more and less energy efficient issuers. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio GHG intensity data must be available.
- Further, the Investment Manager adhered to a minimum percentage of 10.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

A reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does

this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio which is covered by GHG intensity data was 96.98%. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual GHG intensity of the Sub-Fund's portfolio was 51.21% lower than the GHG intensity of the benchmark at the relevant financial year. The calculation of the GHG intensity is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio which is covered by GHG intensity data was	96.98%	95.74%	94.91%
The actual average GHG intensity of the Sub-Fund's portfolio vs average GHG intensity of the benchmark was lower by	51.21%	65.89%	52.11%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
NVIDIA CORP	MANUFACTURING	8.03 %	USA
BROADCOM INC	MANUFACTURING	6.29 %	USA

JPMORGAN CHASE & CO	FINANCIAL AND INSURANCE ACTIVITIES	2.65 %	USA
SALESFORCE INC	INFORMATION AND COMMUNICATION	2.51 %	USA
MORGAN STANLEY	FINANCIAL AND INSURANCE ACTIVITIES	2.43 %	USA
WELLS FARGO & CO	FINANCIAL AND INSURANCE ACTIVITIES	2.36 %	USA
ORACLE CORP	INFORMATION AND COMMUNICATION	2.34 %	USA
AMPHENOL CORP-CL A	MANUFACTURING	2.19 %	USA
AMAZON.COM INC	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	1.88 %	USA
APPLE INC	MANUFACTURING	1.84 %	USA

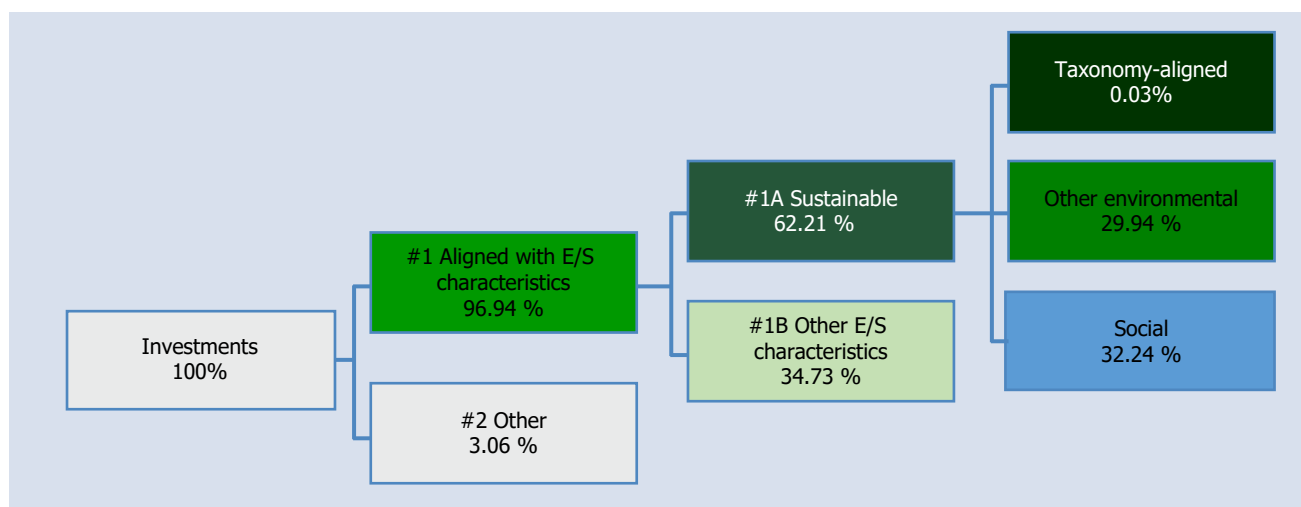

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	0.04 %
B07	Mining of metal ores	0.02 %
B08	Other mining and quarrying	0.01 %
B09	Mining support service activities	0.01 %

Other	NOT SECTORIZED	2.95 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

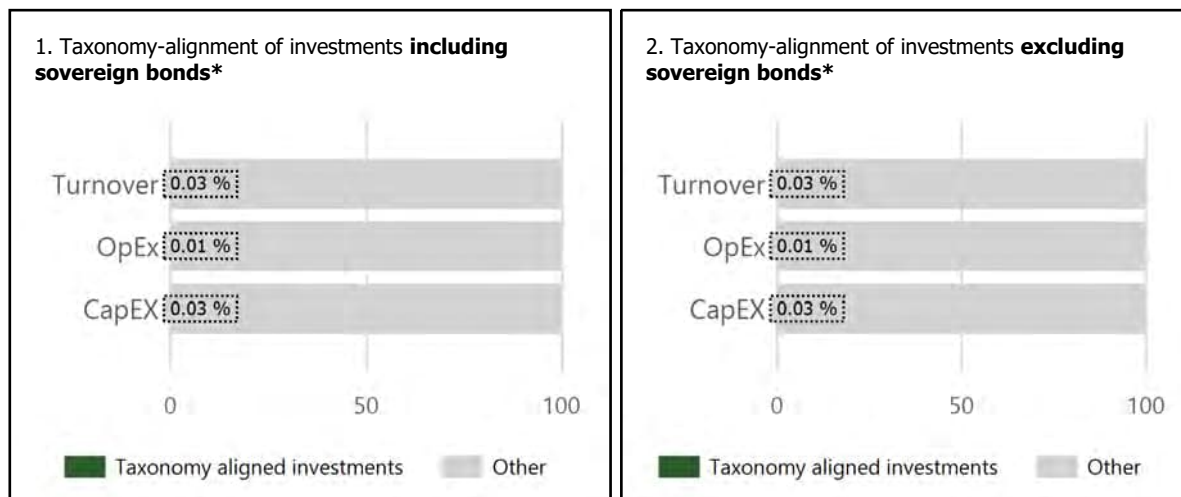

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.02 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.01 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	0.03 %	3.77 %	0.51 %
Capex	0.03 %	0.07 %	0 %
Opex	0.01 %	0.01 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	0.03 %	3.77 %	0.51 %
Capex	0.03 %	0.07 %	0 %
Opex	0.01 %	0.01 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 29.94% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 32.24% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI 's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Investment Manager has assigned "50% MSCI AC World (ACWI) Total Return Net + 50% MSCI World Information Technology Total Return Net" as the Sub-Fund's composite benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by managing the GHG intensity so that it will be continuously 20% lower than the GHG intensity of the benchmark as described in the section "What investment strategy does this financial product follow?".

- **How did the reference benchmark differ from a broad market index?**

The Sub-Fund's composite benchmark is a market index.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The actual GHG intensity of the Sub-Fund's portfolio was 51.21 % lower than the GHG intensity of the benchmark at the relevant financial year end. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **How did this financial product perform compared with the reference benchmark?**

01/10/2024 - 30/09/2025	Allianz Global Artificial Intelligence	Benchmark	Active Return
Performance %	14.68	16.31	-1.63

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did this financial product perform compared with the broad market index?

01/10/2024 - 30/09/2025	Allianz Global Artificial Intelligence	Benchmark	Active Return
Performance %	14.68	16.31	-1.63

Product name:

Allianz Global Capital Plus

Legal entity identifier: 529900DH9JBAV7A2IO06

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 32.14% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Global Capital Plus (the "Sub-Fund") promoted a broad range of environmental and social characteristics. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe direct investments which were selected with respect to sustainability aspects and other internal funds ("Target Funds") which promote environmental or social characteristics, or which had Sustainable Investments as an objective for at least 90% of the Sub-Fund's assets. Target Funds were counted into the 90% if they disclose according to Art 8 Sustainable Finance Disclosure Regulation ("SFDR") or Art 9 SFDR. Direct investments were counted into the 90% if they were managed according to another approach of the Investment Manager qualifying as Art 8 or 9 SFDR).
- Further, the Investment Manager adhered to a minimum percentage of 1.50% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the Sub-Fund's assets invested in direct investments which are selected with respect to sustainability aspects and Target Funds which promote environmental or social characteristics, or which have Sustainable Investments as an objective at the end of the financial year was 96.45 %. In case the Investment Manager decides to directly invest in Debt or Equity Securities which are selected with respect to sustainability aspects the adherence to the respective binding element will be reported.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the Sub-Fund's assets invested in direct investments which are selected with respect to sustainability aspects and Target Funds which promote environmental or social characteristics, or which have Sustainable Investments as an objective at the end of the financial year was	96.45 %	95.39 %	97.02 %
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. The exclusion criteria did not apply to Target Funds managed by another Investment Manager and for Target Funds managed by the Investment Manager, but which did not promote environmental or social characteristics or did not have Sustainable Investments as an objective. The Investment Manager would limit this part of the Sub-Fund assets to 30%, so that the exclusion criteria applied to the majority of the Sub-Funds assets. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogeneous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
A	AGRICULTURE, FORESTRY AND FISHING	0.02 %
A01	Crop and animal production, hunting and related service activities	0.02 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 39.98 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

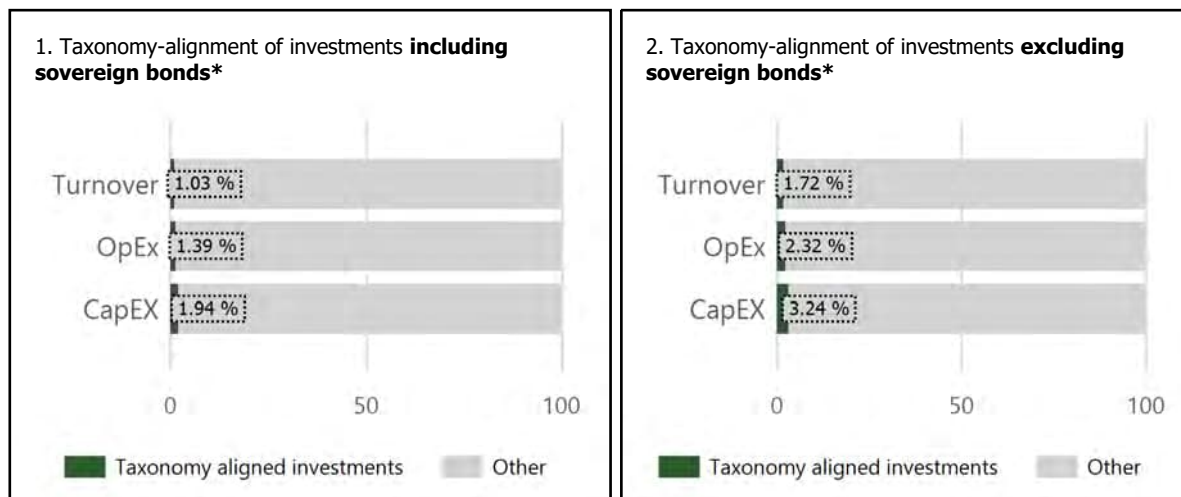

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.99 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.07 %
Enabling activities	0.38 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	1.03 %	0.61 %	1.1 %
Capex	1.94 %	1.42 %	0 %
Opex	1.39 %	0.98 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	1.72 %	1.06 %	2.12 %
Capex	3.24 %	2.46 %	0 %
Opex	2.32 %	1.7 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 5.77% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 25.31% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI 's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Global Credit

Legal entity identifier: 549300YBUQOG42TTJR84

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 44.93% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Global Credit (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- Further, the Investment Manager adhered to a minimum percentage of 10.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does

this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from distribution of tobacco, or deriving more than 10% of their revenues from providing services in relation to tobacco,
- involved in the production of gambling or pornography, or deriving more than 10% of their revenues from the sum of (i) distribution/sales of and (ii) providing services in relation to gambling or pornography,
- involved in the production of non-conventional oil and gas, or deriving more than 10% of their revenues from providing services in relation to non-conventional oil and gas,
- involved in the production of alcohol, or deriving more than 10% of their revenues from distribution/sales of alcohol or deriving more than 20% of their revenues from providing services in relation to alcohol.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The actual percentage of the portfolio with a proprietary sustainability score of 2 or more was 82.58 % at the financial year end. The actual percentage of the benchmark with a proprietary sustainability score was 73.1 %. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

The binding elements except for one criterion were adhered to throughout the financial year 2025. The criterion which was not adhered to for a certain time period led to an investment limit violation. This violation was resolved according to the internal policies of the Investment Manager.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a proprietary sustainability score was	82.58%	76.32%	70.24%
The actual percentage of the benchmark with a proprietary sustainability score was	73.1%	65.48%	61.65%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets

-------	----------------	---------

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 13.63 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	3.38 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.18 %
Enabling activities	0.02 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	3.39 %	2.5 %	2.28 %
Capex	2.16 %	4.39 %	0 %
Opex	1.24 %	3.37 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	3.92 %	2.6 %	2.32 %
Capex	2.5 %	4.57 %	0 %
Opex	1.44 %	3.51 %	0 %

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 7.45% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 34.1% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Global Diversified Credit

Legal entity identifier: 549300KHQG2E3AS5HS50

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 43.67% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Global Diversified Credit (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- Further, the Investment Manager adhered to a minimum percentage of 10.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does

this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 10% of their revenue from thermal coal extraction,

- active within the utility sector and generating more than 20% of their revenues from coal,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The actual percentage of the portfolio with a proprietary sustainability score of 2 or more was 68.65 % at the financial year end. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a proprietary sustainability score was	68.65%	66.68%	66.11%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
A	AGRICULTURE, FORESTRY AND FISHING	0.05 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 3.24 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	2.25 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.03 %
Enabling activities	0.59 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	2.27 %	2.08 %	1.54 %
Capex	2.83 %	2.38 %	0 %
Opex	1.28 %	1.62 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	2.35 %	2.11 %	1.56 %
Capex	2.93 %	2.41 %	0 %
Opex	1.32 %	1.64 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 5.97% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 35.43% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI 's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Global Dividend

Legal entity identifier: 549300G AFCNT5HBXHI40

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 54.75% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Global Dividend (the "Sub-Fund") promoted environmental and social characteristics as well as the reduction of greenhouse gas ("GHG") intensity. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed investments (excluded cash and derivatives) according to the greenhouse gas ("GHG") emissions of investee companies as far as such data was available. Based on this, the Investment Manager managed the Sub-Fund so that the GHG intensity of the portfolio declines over time. The basis for assessing the decline was a GHG intensity target set for the respective end of the Sub-Fund's financial year. GHG intensity was defined as GHG emissions (scope 1 and 2) per million USD sales of the issuer. GHG emissions per million USD sales was used, as this metrics allows to differentiate between more and less energy efficient issuers. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio GHG intensity data must be available.
- Further, the Investment Manager adhered to a minimum percentage of 10.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does

Sustainability indicators
measure how the
environmental or social
characteristics promoted
by the financial product
are attained.

this financial product follow?" in the pre-contractual document.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 10% of their revenue from thermal coal extraction,

- active within the utility sector and generating more than 20% of their revenues from coal,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio which is covered by GHG intensity data was 97.78%. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual GHG intensity of the Sub-Fund's portfolio compared to the GHG target set under the GHG intensity pathway for the end of the relevant financial year was 33.61%. The calculation of the GHG intensity is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

The binding elements except for one criterion were adhered to throughout the financial year 2025. The criterion which was not adhered to for a certain time period led to an investment limit violation. This violation was resolved according to the internal policies of the Investment Manager.

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
MICROSOFT CORP	INFORMATION AND COMMUNICATION	4.70 %	USA
ALPHABET INC-CL A	INFORMATION AND COMMUNICATION	3.30 %	USA

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	4.76 %
B06	Extraction of crude petroleum and natural gas	3.67 %
B07	Mining of metal ores	1.09 %
C	MANUFACTURING	36.65 %
C19	Manufacture of coke and refined petroleum products	1.89 %
C20	Manufacture of chemicals and chemical products	5.61 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.68 %
C22	Manufacture of rubber and plastic products	1.21 %
C26	Manufacture of computer, electronic and optical products	9.81 %
C27	Manufacture of electrical equipment	4.04 %
C28	Manufacture of machinery and equipment n.e.c.	3.44 %
C29	Manufacture of motor vehicles, trailers and semi-trailers	5.73 %
C32	Other manufacturing	2.23 %
D	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	1.82 %
D35	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	1.82 %
G	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	5.91 %
G46	Wholesale trade, except of motor vehicles and motorcycles	4.11 %
G47	Retail trade, except of motor vehicles and motorcycles	1.80 %
H	TRANSPORTATION AND STORAGE	4.02 %
H52	Warehousing and support activities for transportation	1.99 %
H53	Postal and courier activities	2.03 %
I	ACCOMMODATION AND FOOD SERVICE ACTIVITIES	3.71 %
I55	Accommodation	2.24 %
I56	Food and beverage service activities	1.47 %

J58	Publishing activities	3.98 %
J63	Information service activities	6.45 %
K	FINANCIAL AND INSURANCE ACTIVITIES	29.00 %
K64	Financial service activities, except insurance and pension funding	13.98 %
K65	Insurance, reinsurance and pension funding, except compulsory social security	9.58 %
K66	Activities auxiliary to financial services and insurance activities	5.45 %
M	PROFESSIONAL, SCIENTIFIC AND TECHNICAL ACTIVITIES	1.53 %
M73	Advertising and market research	1.53 %
Other	NOT SECTORIZED	2.18 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	3.82 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	2.53 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 10.19% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 40.48% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager’s engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI’s strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI’s holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Product name:

Allianz Global Equity Growth

Legal entity identifier: 5299007LC5RZOIZQJK05

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 63.8% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Global Equity Growth (the "Sub-Fund") promoted environmental and social characteristics as well as the management of greenhouse gas ("GHG") intensity. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed investments (excluded cash and derivatives) according to the greenhouse gas ("GHG") emissions of investee companies as far as such data was available. Based on this, the Investment Manager managed the Sub-Fund in a way that the GHG intensity of the portfolio was 20.00% lower than the GHG intensity of the Sub-Fund's benchmark. GHG intensity was defined as GHG emissions (scope 1 and 2) per million USD sales of the issuer. GHG emissions per million USD sales was used, as this metrics allows to differentiate between more and less energy efficient issuers. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio GHG intensity data must be available.

A reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio which is covered by GHG intensity data was 99.48%. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual GHG intensity of the Sub-Fund's portfolio was 81.1% lower than the GHG intensity of the benchmark at the relevant financial year. The calculation of the GHG intensity is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **... and compared to previous periods?**

On 28.09.2023, the sustainable investment approach was changed from the Climate Engagement with Outcome (CEWO) to another E/S Strategy (KPI Strategy - Relative). The indicators for measuring compliance with ecological and social characteristics between the investment approaches are only partially comparable. If the indicators for the CEWO are not comparable, they are not included in the table. For information on the performance of the strategy, please refer to the 2023 year-end report (available upon request).

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio which is covered by GHG intensity data was	99.48%	97.82%	97.59%
The actual average GHG intensity of the Sub-Fund's portfolio vs average GHG intensity of the benchmark was lower by	81.1%	85.21%	87.34%
The response rate (companies replied to the engagement questionnaire) was*	-	-	93%
Change of the carbon footprint**	-	-	24,7%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

* The top 10 carbon emitting issuers are determined periodically. Over the reference dates Q4/2020, Q1/2022 and Q1/2023 the 15 emitters were identified.

** Change of the CO2 emissions of the year 2019 compared to 2021.

All investments in sovereign issuers were evaluated with an SRI rating until the sustainable investment approach was changed.

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
VISA INC-CLASS A SHARES	FINANCIAL AND INSURANCE ACTIVITIES	5.90 %	USA

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	37.74 %
C11	Manufacture of beverages	1.91 %
C16	Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials	0.74 %
C20	Manufacture of chemicals and chemical products	2.53 %
C25	Manufacture of fabricated metal products, except machinery and equipment	1.32 %
C26	Manufacture of computer, electronic and optical products	22.57 %
C27	Manufacture of electrical equipment	1.31 %
C28	Manufacture of machinery and equipment n.e.c.	4.89 %
C29	Manufacture of motor vehicles, trailers and semi-trailers	2.46 %
G	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	11.44 %
G46	Wholesale trade, except of motor vehicles and motorcycles	3.81 %
G47	Retail trade, except of motor vehicles and motorcycles	7.63 %

K66	Activities auxiliary to financial services and insurance activities	12.35 %
N	ADMINISTRATIVE AND SUPPORT SERVICE ACTIVITIES	3.69 %
N80	Security and investigation activities	1.95 %
N82	Office administrative, office support and other business support activities	1.74 %
Other	NOT SECTORIZED	0.48 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

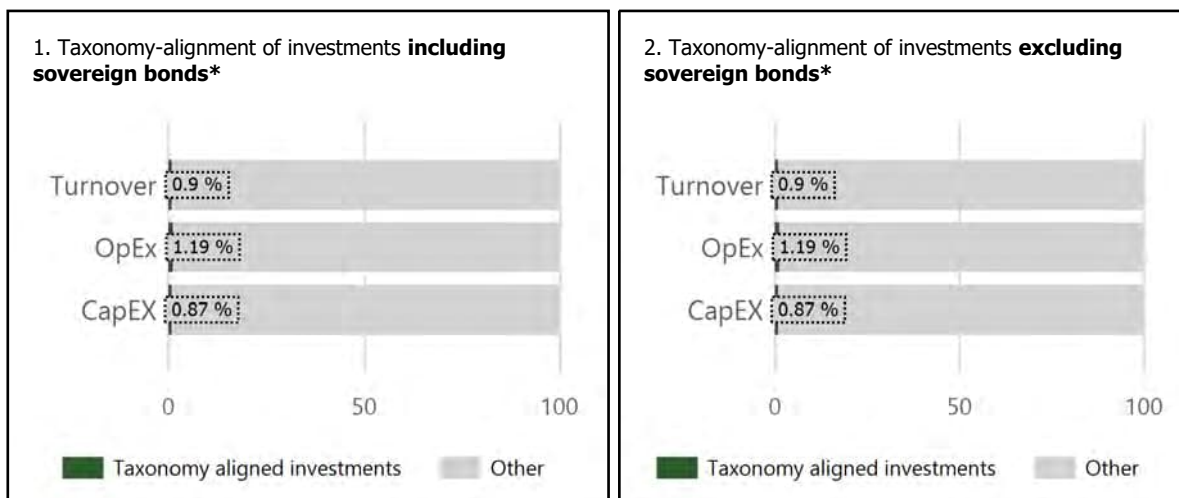

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

- Yes
- In fossil gas In nuclear energy
- No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.86 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.90 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	0.9 %	0.16 %	1.45 %
Capex	0.87 %	0.34 %	0.01 %
Opex	1.19 %	0.01 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	0.9 %	0.16 %	1.45 %
Capex	0.87 %	0.34 %	0.01 %
Opex	1.19 %	0.01 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 16.41% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 46.49% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Investment Manager has assigned the index "MSCI AC World (ACWI) Total Return Net" as the Sub-Fund's benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by managing the GHG intensity so that it will be continuously 20% lower than the GHG intensity of the benchmark as described in the section "What investment strategy does this financial product follow?".

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did the reference benchmark differ from a broad market index?

The Sub-Fund's benchmark is a market index.

- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

The actual GHG intensity of the Sub-Fund's portfolio was 81.1 % lower than the GHG intensity of the benchmark at the relevant financial year end. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- How did this financial product perform compared with the reference benchmark?

01/10/2024 - 30/09/2025	Allianz Global Equity Growth	Benchmark	Active Return
Performance %	1.53	17.27	-15.74

Performance %	1.53	17.27	-15.74

Product name:

Allianz Global Equity Insights

Legal entity identifier: 549300ZVWGJLIGOEH86

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 41.33% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Global Equity Insights (the "Sub-Fund") promoted environmental and social characteristics as well as the reduction of greenhouse gas ("GHG") intensity. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed investments (excluded cash and derivatives) according to the greenhouse gas ("GHG") emissions of investee companies as far as such data was available. Based on this, the Investment Manager managed the Sub-Fund so that the GHG intensity of the portfolio declines over time. The basis for assessing the decline was a GHG intensity target set for the respective end of the Sub-Fund's financial year. GHG intensity was defined as GHG emissions (scope 1 and 2) per million USD sales of the issuer. GHG emissions per million USD sales was used, as this metrics allows to differentiate between more and less energy efficient issuers. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio GHG intensity data must be available.
- Further, the Investment Manager adhered to a minimum percentage of 10.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does

this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio which is covered by GHG intensity data was 94.27%. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual GHG intensity of the Sub-Fund's portfolio compared to the GHG target set under the GHG intensity pathway for the end of the relevant financial year was 22.47%. The calculation of the GHG intensity is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio which is covered by GHG intensity data was	94.27%	99.63%	94.89%
The actual GHG intensity of the Sub-Fund's portfolio compared to the GHG target set under the GHG intensity pathway for the end of the relevant financial year was	22.47%	17.25%	-0.01-
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
CISCO SYSTEMS INC	MANUFACTURING	3.54 %	USA

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	4.91 %
B06	Extraction of crude petroleum and natural gas	1.57 %
B07	Mining of metal ores	3.34 %
C	MANUFACTURING	46.43 %
C19	Manufacture of coke and refined petroleum products	1.76 %
C20	Manufacture of chemicals and chemical products	5.16 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	5.58 %
C23	Manufacture of other non-metallic mineral products	2.79 %
C26	Manufacture of computer, electronic and optical products	13.59 %
C27	Manufacture of electrical equipment	4.47 %
C28	Manufacture of machinery and equipment n.e.c.	4.36 %
C29	Manufacture of motor vehicles, trailers and semi-trailers	4.95 %

C30	Manufacture of other transport equipment	2.35 %
C32	Other manufacturing	1.42 %
D	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	5.10 %
D35	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	5.10 %
G	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	4.02 %
G47	Retail trade, except of motor vehicles and motorcycles	4.02 %
H	TRANSPORTATION AND STORAGE	0.60 %
H49	Land transport and transport via pipelines	0.60 %
J	INFORMATION AND COMMUNICATION	20.92 %
J58	Publishing activities	10.56 %
J60	Programming and broadcasting activities	3.45 %

K66	Activities auxiliary to financial services and insurance activities	1.33 %
L	REAL ESTATE ACTIVITIES	0.93 %
L68	REAL ESTATE ACTIVITIES	0.93 %
N	ADMINISTRATIVE AND SUPPORT SERVICE ACTIVITIES	1.52 %
N79	Travel agency, tour operator and other reservation service and related activities	1.52 %
Q	HUMAN HEALTH AND SOCIAL WORK ACTIVITIES	0.98 %
Q86	Human health activities	0.98 %
R	ARTS, ENTERTAINMENT AND RECREATION	2.67 %
R92	Gambling and betting activities	2.67 %
Other	NOT SECTORIZED	2.80 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

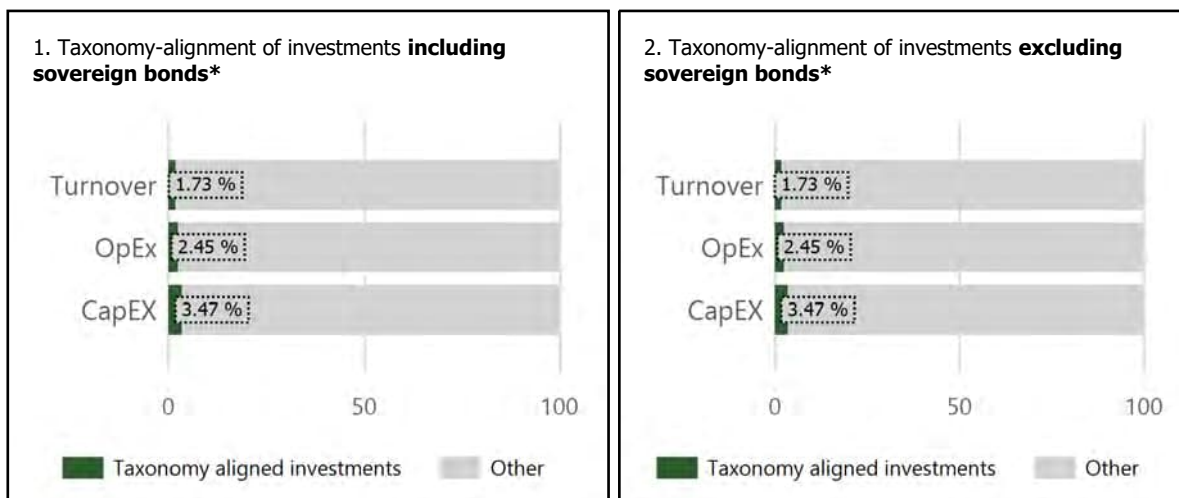

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

- Yes
- In fossil gas In nuclear energy
- No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	1.73 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.03 %
Enabling activities	1.26 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	1.73 %	2.43 %	2.14 %
Capex	3.47 %	2.3 %	0 %
Opex	2.45 %	1.58 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	1.73 %	2.43 %	2.14 %
Capex	3.47 %	2.3 %	0 %
Opex	2.45 %	1.58 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 9.55% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 30.06% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager’s engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI’s strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI’s holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks
are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Product name:

Allianz Global Equity Unconstrained

Legal entity identifier: 529900MK0JF6PD64Q806

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 62% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Global Equity Unconstrained (the "Sub-Fund") promoted environmental and social characteristics as well as the management of greenhouse gas ("GHG") intensity. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed investments (excluded cash and derivatives) according to the greenhouse gas ("GHG") emissions of investee companies as far as such data was available. Based on this, the Investment Manager managed the Sub-Fund in a way that the GHG intensity of the portfolio was 20.00% lower than the GHG intensity of the Sub-Fund's benchmark. GHG intensity was defined as GHG emissions (scope 1 and 2) per million USD sales of the issuer. GHG emissions per million USD sales was used, as this metrics allows to differentiate between more and less energy efficient issuers. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio GHG intensity data must be available.

A reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio which is covered by GHG intensity data was 99.28%. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual GHG intensity of the Sub-Fund's portfolio was 71.49% lower than the GHG intensity of the benchmark at the relevant financial year. The calculation of the GHG intensity is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **... and compared to previous periods?**

On 28.09.2023, the sustainable investment approach was changed from the Climate Engagement with Outcome (CEWO) to another E/S Strategy (KPI Strategy - Relative). The indicators for measuring compliance with ecological and social characteristics between the investment approaches are only partially comparable. If the indicators for the CEWO are not comparable, they are not included in the table. For information on the performance of the strategy, please refer to the 2023 year-end report (available upon request).

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio which is covered by GHG intensity data was	99.28%	99.75%	98%
The actual average GHG intensity of the Sub-Fund's portfolio vs average GHG intensity of the benchmark was lower by	71.49%	88.51%	87.76%
The response rate (companies replied to the engagement questionnaire) was*	-	-	73%
Change of the carbon footprint**	-	-	18.6%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

* The top 10 carbon emitting issuers are determined periodically. Over the reference dates Q4/2020, Q1/2022 and Q1/2023 the 15 emitters were identified.

** Change of the CO2 emissions of the year 2019 compared to 2021.

All investments in sovereign issuers were evaluated with an SRI rating until the sustainable investment approach was changed.

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
NVIDIA CORP	MANUFACTURING	4.52 %	USA

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	37.42 %
C11	Manufacture of beverages	3.99 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

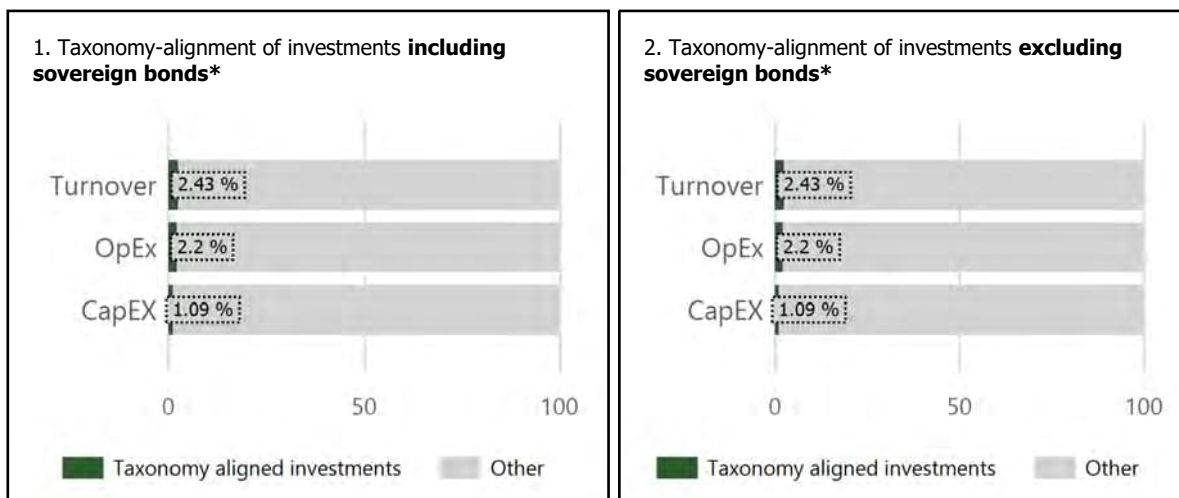

Yes

In fossil gas In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	2.29 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	1.25 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	2.43 %	0.14 %	0.11 %
Capex	1.09 %	0.43 %	0.05 %
Opex	2.2 %	0.01 %	0.01 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	2.43 %	0.14 %	0.11 %
Capex	1.09 %	0.43 %	0.05 %
Opex	2.2 %	0.01 %	0.01 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 15.44% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 44.13% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Investment Manager has assigned the index "MSCI AC World (ACWI) Total Return Net" as the Sub-Fund's benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by managing the GHG intensity so that it will be continuously 20% lower than the GHG intensity of the benchmark as described in the section "What investment strategy does this financial product follow?".

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did the reference benchmark differ from a broad market index?

The Sub-Fund's benchmark is a market index.

- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

The actual GHG intensity of the Sub-Fund's portfolio was 71.49 % lower than the GHG intensity of the benchmark at the relevant financial year end. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- How did this financial product perform compared with the reference benchmark?

01/10/2024 - 30/09/2025	Allianz Global Equity Unconstrained	Benchmark	Active Return
Performance %	-2.26	17.27	-19.53

- How did this financial product perform compared with the broad market index?

Performance %	-2.26	17.27	-19.53

Product name:

Allianz Global Floating Rate Notes Plus

Legal entity identifier: 529900QOOVX41NDJV51

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 34.76% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Global Floating Rate Notes Plus (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- Further, the Investment Manager adhered to a minimum percentage of 5.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does

this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- deriving more than 5% of their revenues from (i) weapons or (ii) military equipment and military services,
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco,
- deriving more than 5% of their revenues from (i) the production of alcohol (limited to spirits) or (ii) the distribution/sales of alcohol,
- involved in the production of pornography, or deriving more than 5% of their revenues from the distribution/sales of pornography,
- Deriving more than 5% of their revenues from the (i) production, (ii) exploration, or (iii) extraction of fossil fuels including thermal coal, conventional oil and gas, and non-conventional oil and gas-related activities (This includes, but is not limited to, the extraction of tar/oil sands, shale oil, shale gas and arctic drilling),
- deriving more than 5% of their revenues from the (i) production or (ii) distribution/sales of gambling.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The actual percentage of the portfolio with a proprietary sustainability score of 2 or more was 72.85 % at the financial year end. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- **... and compared to previous periods?**

On 02.06.2023, the sustainable investment approach was changed from the Climate Engagement with Outcome (CEWO) to another E/S Strategy (SRI BIC). The indicators for measuring compliance with ecological and social characteristics between the investment approaches are only partially comparable. If the indicators for the CEWO are not comparable, they are not included in the table. For information on the performance of the strategy, please refer to the 2023 year-end report (available upon request).

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a proprietary sustainability score was	72.85%	70.68%	53.89%
The response rate (companies replied to the engagement questionnaire) was*	-	-	71%
Change of the carbon footprint**	-	-	-11.0%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

* The top 10 carbon emitting issuers are determined periodically. Over the reference dates Q4/2020, Q1/2022 and Q1/2023 the 21 emitters were identified.

** Change of the CO2 emissions of the year 2019 compared to 2021

All investments in sovereign issuers were evaluated with an SRI rating until the sustainable investment approach was changed.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 16.91 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.53 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.34 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	0.62 %	1.18 %	1.06 %
Capex	0.6 %	1.86 %	0 %
Opex	0.91 %	2.27 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	0.75 %	1.24 %	1.06 %
Capex	0.72 %	1.95 %	0 %
Opex	1.1 %	2.38 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 3.16% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 30.98% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Global High Yield

Legal entity identifier: 549300Y1G08CCQCSWL61

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 32.65% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Global High Yield (the "Sub-Fund") promoted environmental and social characteristics as well as the management of greenhouse gas ("GHG") intensity. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed investments (excluded cash and derivatives) according to the greenhouse gas ("GHG") emissions of investee companies as far as such data was available. Based on this, the Investment Manager managed the Sub-Fund in a way that the GHG intensity of the portfolio was 20.00% lower than the GHG intensity of the Sub-Fund's benchmark. GHG intensity was defined as GHG emissions (scope 1 and 2) per million USD sales of the issuer. GHG emissions per million USD sales was used, as this metrics allows to differentiate between more and less energy efficient issuers. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio GHG intensity data must be available.
- Further, the Investment Manager adhered to a minimum percentage of 5.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

A reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund 's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio which is covered by GHG intensity data was 75.79 %. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual GHG intensity of the Sub-Fund's portfolio was 57.46 % lower than the GHG intensity of the benchmark at the relevant financial year. The calculation of the GHG intensity is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **... and compared to previous periods?**

On 29.12.2022, the sustainable investment approach was changed from the Climate Engagement with Outcome (CEWO) to another E/S Strategy (KPI Strategy - Relative). The indicators for measuring compliance with ecological and social characteristics between the investment approaches are only partially comparable. If the indicators for the CEWO are not comparable, they are not included in the table. For information on the performance of the strategy, please refer to the 2022 year-end report (available upon request).

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio which is covered by GHG intensity data was	75.79%	77.5%	81.07%
The actual average GHG intensity of the Sub-Fund's portfolio vs average GHG intensity of the benchmark was lower by	57.46%	60.75%	61.06%
The response rate (companies replied to the engagement questionnaire) was*	-	-	94%
Change of the carbon footprint**	-	-	-7.9%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

* The top 10 carbon emitting issuers are determined periodically. Over the two reference dates Q4/2020 and Q1/2022 the 17 emitters were identified.

** Change of the CO2 emissions of the year 2019 compared to 2021.

All investments in sovereign issuers were evaluated with an SRI rating until the sustainable investment approach was changed.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	1.03 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.14 %
Enabling activities	0.34 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	1.05 %	1.7 %	4.15 %
Capex	1.33 %	1.14 %	0 %
Opex	0.9 %	1.01 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	1.05 %	1.77 %	4.15 %
Capex	1.33 %	1.19 %	0 %
Opex	0.9 %	1.05 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 8.11% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 23.48% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Investment Manager has assigned the index "ICE BOFAML Global High Yield Constrained (hedged)" as the Sub-Fund's benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by managing the GHG intensity so that it will be continuously 20% lower than the GHG intensity of the benchmark as described in the section "What investment strategy does this financial product follow?".

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did the reference benchmark differ from a broad market index?

The Sub-Fund's benchmark is a market index.

- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

The actual GHG intensity of the Sub-Fund's portfolio was 57.46 % lower than the GHG intensity of the benchmark at the relevant financial year end. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- How did this financial product perform compared with the reference benchmark?

01/10/2024 - 30/09/2025	Allianz Global High Yield	Benchmark	Active Return
Performance %	6.48	7.66	-1.18

- How did this financial product perform compared with the broad market index?

01/10/2024 - 30/09/2025	Allianz Global High Yield	Benchmark	Active Return
Performance %	6.48	7.66	-1.18

Product name:

Allianz Global Hi-Tech Growth

Legal entity identifier: 529900VB6HV6W8GMHM45

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 62.5% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Global Hi-Tech Growth (the "Sub-Fund") promoted environmental and social characteristics as well as the reduction of greenhouse gas ("GHG") intensity. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed investments (excluded cash and derivatives) according to the greenhouse gas ("GHG") emissions of investee companies as far as such data was available. Based on this, the Investment Manager managed the Sub-Fund so that the GHG intensity of the portfolio declines over time. The basis for assessing the decline was a GHG intensity target set for the respective end of the Sub-Fund's financial year. GHG intensity was defined as GHG emissions (scope 1 and 2) per million USD sales of the issuer. GHG emissions per million USD sales was used, as this metrics allows to differentiate between more and less energy efficient issuers. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio GHG intensity data must be available.
- Further, the Investment Manager adhered to a minimum percentage of 10.00% of Sustainable Investments.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund 's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio which is covered by GHG intensity data was 96 %. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual GHG intensity of the Sub-Fund's portfolio compared to the GHG target set under the GHG intensity pathway for the end of the relevant financial year was 17.8 %. The calculation of the GHG intensity is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- ... and compared to previous periods?

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio which is covered by GHG intensity data was	96%	96.95%	95.07%
The actual GHG intensity of the Sub-Fund's portfolio compared to the GHG target set under the GHG intensity pathway for the end of the relevant financial year was	17.8%	29.61%	-0.01-
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
NVIDIA CORP	MANUFACTURING	8.57 %	USA

VISA INC-CLASS A SHARES	FINANCIAL AND INSURANCE ACTIVITIES	2.43 %	USA
TENCENT HOLDINGS LTD	INFORMATION AND COMMUNICATION	2.03 %	People's Republic of China
TEXAS INSTRUMENTS INC	MANUFACTURING	1.98 %	USA
CADENCE DESIGN SYS INC	INFORMATION AND COMMUNICATION	1.93 %	USA

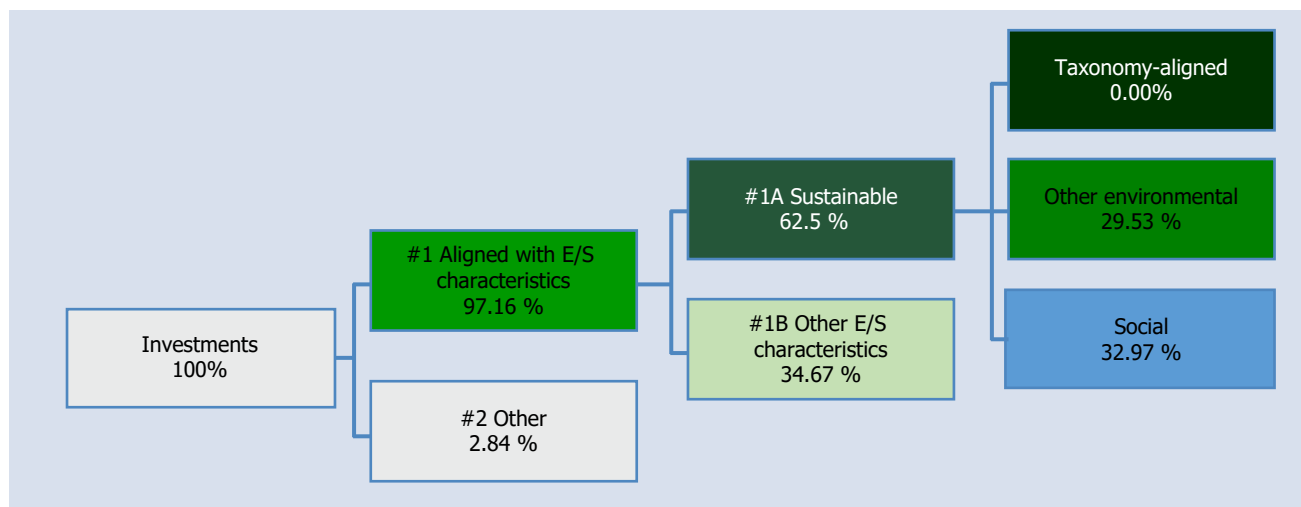

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	46.54 %
C25	Manufacture of fabricated metal products, except machinery and equipment	1.24 %
C26	Manufacture of computer, electronic and optical products	43.34 %
C27	Manufacture of electrical equipment	0.89 %
C28	Manufacture of machinery and equipment n.e.c.	1.06 %
G	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	4.69 %
G47	Retail trade, except of motor vehicles and motorcycles	4.69 %
J	INFORMATION AND COMMUNICATION	42.09 %
J58	Publishing activities	18.96 %
J61	Telecommunications	0.82 %
J62	Computer programming, consultancy and related activities	4.63 %
J63	Information service activities	17.68 %
K	FINANCIAL AND INSURANCE ACTIVITIES	2.35 %
K66	Activities auxiliary to financial services and insurance activities	2.35 %
N	ADMINISTRATIVE AND SUPPORT SERVICE ACTIVITIES	1.49 %
N79	Travel agency, tour operator and other reservation service and related activities	1.49 %
Other	NOT SECTORIZED	2.84 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	0 %	0.08 %	0.32 %
Capex	0.08 %	0.08 %	0 %
Opex	0 %	0.04 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	0 %	0.08 %	0.32 %
Capex	0.08 %	0.08 %	0 %
Opex	0 %	0.04 %	0 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 29.53% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 32.97% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did this financial product perform compared with the broad market index?

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Global Intelligent Cities Income (the "Sub-Fund") promoted environmental and social characteristics as well as the management of greenhouse gas ("GHG") intensity. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed investments (excluded cash and derivatives) according to the greenhouse gas ("GHG") emissions of investee companies as far as such data was available. Based on this, the Investment Manager managed the Sub-Fund in a way that the GHG intensity of the portfolio was 20.00% lower than the GHG intensity of the Sub-Fund's benchmark. GHG intensity was defined as GHG emissions (scope 1 and 2) per million USD sales of the issuer. GHG emissions per million USD sales was used, as this metrics allows to differentiate between more and less energy efficient issuers. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio GHG intensity data must be available.
- Further, the Investment Manager adhered to a minimum percentage of 10.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

A reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does

this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio which is covered by GHG intensity data was 93.13%. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual GHG intensity of the Sub-Fund's portfolio was 61.35% lower than the GHG intensity of the benchmark at the relevant financial year. The calculation of the GHG intensity is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio which is covered by GHG intensity data was	93.13%	98.11%	96.22%
The actual average GHG intensity of the Sub-Fund's portfolio vs average GHG intensity of the benchmark was lower by	61.35%	57.56%	34.77%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	2.41 %
B07	Mining of metal ores	1.39 %
B08	Other mining and quarrying	0.47 %
B09	Mining support service activities	0.55 %
C	MANUFACTURING	47.46 %

Q86	Human health activities	0.83 %
Other	NOT SECTORIZED	3.34 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

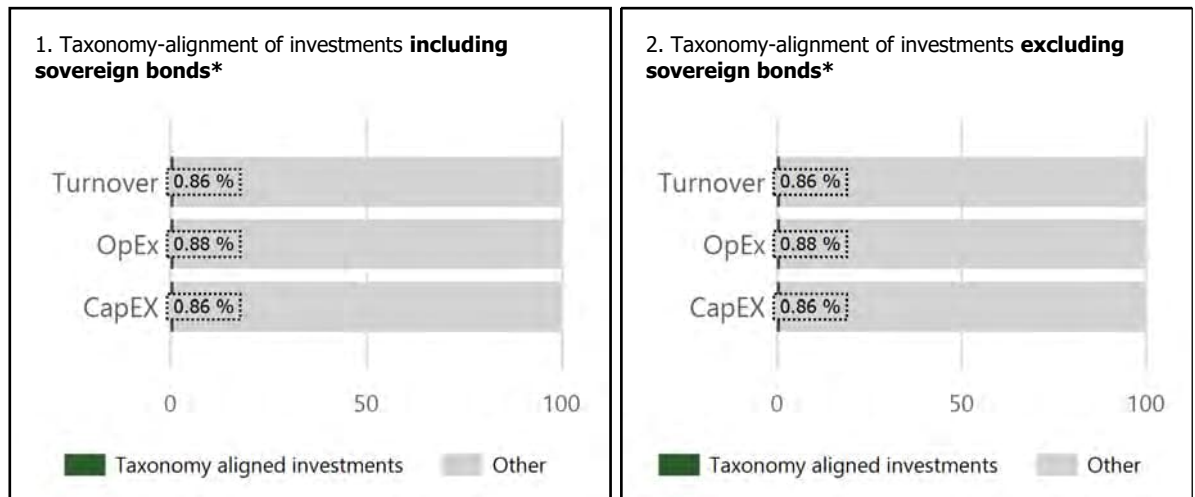

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.62 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.60 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	0.86 %	1.73 %	2.17 %
Capex	0.86 %	1.44 %	0 %
Opex	0.88 %	0.97 %	0 %

Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	0.86 %	1.73 %	2.17 %
Capex	0.86 %	1.44 %	0 %
Opex	0.88 %	0.97 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 15.94% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 40.17% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI 's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Investment Manager has assigned "70% MSCI AC World (ACWI) Total Return Net + 30% ICE BOFAML US Corporate & High Yield Index " as the Sub-Fund's composite benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by managing the GHG intensity so that it will be continuously 20% lower than the GHG intensity of the benchmark as described in the section "What investment strategy does this financial product follow?".

- **How did the reference benchmark differ from a broad market index?**

The Sub-Fund's composite benchmark is a market index.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The actual GHG intensity of the Sub-Fund's portfolio was 61.35 % lower than the GHG intensity of the benchmark at the relevant financial year end. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **How did this financial product perform compared with the reference benchmark?**

01/10/2024 - 30/09/2025	Allianz Global Intelligent Cities Income	Benchmark	Active Return
Performance %	18.09	13.33	4.76

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did this financial product perform compared with the broad market index?

01/10/2024 - 30/09/2025	Allianz Global Intelligent Cities Income	Benchmark	Active Return
Performance %	18.09	13.33	4.76

Product name:

Allianz Global Multi Asset Balanced

Legal entity identifier: 549300IVJKX5A2N0KP64

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 44.73% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Global Multi Asset Balanced (the "Sub-Fund") promoted a broad range of environmental and social characteristics. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe direct investments which were selected with respect to sustainability aspects and other internal funds ("Target Funds") which promote environmental or social characteristics, or which had Sustainable Investments as an objective for at least 70% of the Sub-Fund's assets. Target Funds were counted into the 70% if they disclose according to Art 8 Sustainable Finance Disclosure Regulation ("SFDR") or Art 9 SFDR. Direct investments were counted into the 70% if they were managed according to another approach of the Investment Manager qualifying as Art 8 or 9 SFDR).
- Further, the Investment Manager adhered to a minimum percentage of 3.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the Sub-Fund's assets invested in direct investments which are selected with respect to sustainability aspects and Target Funds which promote environmental or social characteristics, or which have Sustainable Investments as an objective at the end of the financial year was 89.72 %. In case the Investment Manager decides to directly invest in Debt or Equity Securities which are selected with respect to sustainability aspects the adherence to the respective binding element will be reported.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the Sub-Fund's assets invested in direct investments which are selected with respect to sustainability aspects and Target Funds which promote environmental or social characteristics, or which have Sustainable Investments as an objective at the end of the financial year was	89.72 %	83.59 %	92 %
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. The exclusion criteria did not apply to Target Funds managed by another Investment Manager and for Target Funds managed by the Investment Manager, but which did not promote environmental or social characteristics or did not have Sustainable Investments as an objective. The Investment Manager would limit this part of the Sub-Fund assets to 30%, so that the exclusion criteria applied to the majority of the Sub-Funds assets. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogeneous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 19.8 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

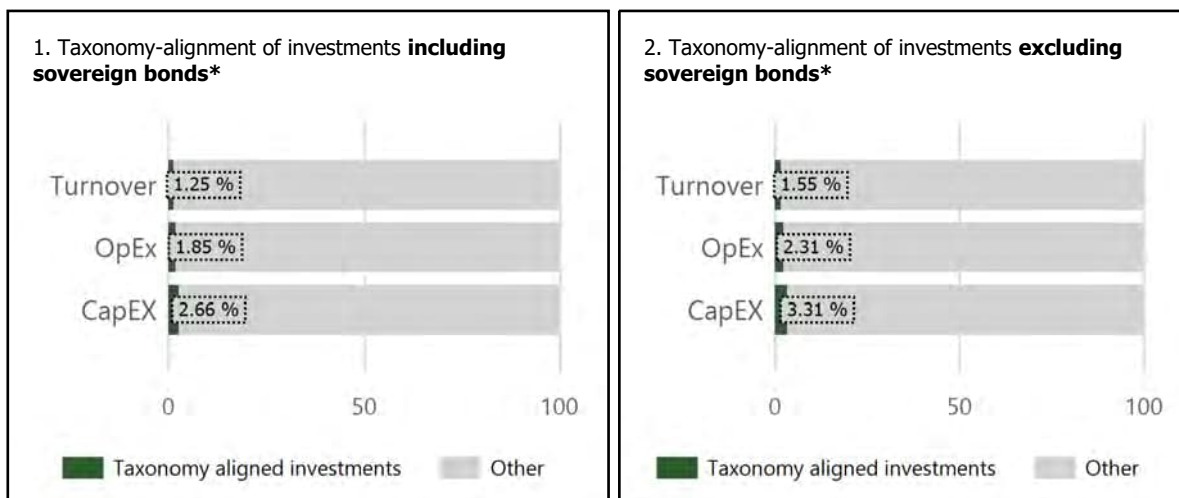

Yes

In fossil gas In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	1.10 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.09 %
Enabling activities	0.63 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	1.25 %	2.81 %	1.08 %
Capex	2.66 %	3.34 %	0 %
Opex	1.85 %	2.39 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	1.55 %	3.47 %	1.56 %
Capex	3.31 %	4.12 %	0 %
Opex	2.31 %	2.94 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 11.12% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 32.36% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager’s engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI’s strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI’s holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks
are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Product name:

Allianz Global Sustainability

Legal entity identifier: 529900W68IN4IJ546R85

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 55.7% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Global Sustainability (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- Further, the Investment Manager adhered to a minimum percentage of 50.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does

this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- deriving more than 10% of their revenues from (i) weapons or (ii) military equipment and military services,
- deriving more than 1% of their revenues from exploration, mining, extraction, distribution or refining of thermal coal,
- active within the utility sector and generating more than 20% of their revenues from coal,
- deriving more than 10% of their revenues from the exploration, extraction, distribution or refining of oil fuels,
- deriving more than 50% of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels,
- deriving more than 50% of their revenues from electricity generation with a GHG intensity of more than 100 g CO₂ e/kWh,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco,
- deriving more than 5% of their revenues in the sectors (i) alcohol, (ii) gambling, or (iii) pornography.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The investment universe has been reduced by excluding at least 20.00% of the total number of potential issuers compared to the investible issuers according to the Sub-Fund's general investment strategy as described in the prospectus.

- The actual percentage of the portfolio with a proprietary sustainability score of 2 or more was 96.34 % at the financial year end. The actual percentage of the benchmark with a proprietary sustainability score was 86.98 %. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a proprietary sustainability score was	96.34%	73.12%	75.16%
The actual percentage of the benchmark with a proprietary sustainability score was	86.98%	76.36%	80.27%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
MICROSOFT CORP	INFORMATION AND COMMUNICATION	6.53 %	USA

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	40.39 %
C10	Manufacture of food products	1.63 %
C20	Manufacture of chemicals and chemical products	4.70 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	6.52 %
C25	Manufacture of fabricated metal products, except machinery and equipment	1.17 %
C26	Manufacture of computer, electronic and optical products	20.50 %
C27	Manufacture of electrical equipment	1.83 %
C28	Manufacture of machinery and equipment n.e.c.	4.03 %
D	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	3.79 %
D35	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	3.79 %
E	WATER SUPPLY; SEWERAGE, WASTE MANAGEMENT AND REMEDIATION ACTIVITIES	1.82 %
E38	Waste collection, treatment and disposal activities; materials recovery	1.82 %
G	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	9.47 %
G46	Wholesale trade, except of motor vehicles and motorcycles	1.70 %
G47	Retail trade, except of motor vehicles and motorcycles	7.77 %
H	TRANSPORTATION AND STORAGE	1.78 %
H49	Land transport and transport via pipelines	1.78 %
I	ACCOMMODATION AND FOOD SERVICE ACTIVITIES	1.66 %

N	ADMINISTRATIVE AND SUPPORT SERVICE ACTIVITIES	2.31 %
N81	Services to buildings and landscape activities	2.31 %
Other	NOT SECTORIZED	2.81 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	1.60 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	1.29 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	2.17 %	0.95 %	1.26 %
Capex	2.99 %	1.18 %	0.03 %
Opex	2.8 %	1.38 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	2.17 %	0.95 %	1.26 %
Capex	2.99 %	1.18 %	0.03 %
Opex	2.8 %	1.38 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 10.9% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 40.9% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Global Water

Legal entity identifier: 529900NQRL4PJUZL0R84

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 75.53% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Global Water (the "Sub-Fund") promoted environmental and social characteristics and one or more of the United Nations Sustainable Development Goals ("SDGs") or other Sustainable Investment objectives. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe mainly those issuers providing products or services suitable to facilitate positive environmental and social contributions. Environmental or social contributions include a broad range of topics, for which the Investment Manager used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the EU Taxonomy objectives. The proprietary methodology to assess the environmental and social contribution was described in the section "What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?" and contained an assessment of the positive contribution to environmental and social contributions as well as an assessment to avoid significant harm to any environmental or social objective.
- Further, the Investment Manager adhered to a minimum percentage of 50.00% of Sustainable Investments.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the sustainable investment objective the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 1% of their revenues from exploration, mining, extraction, distribution or refining of thermal coal,
- active within the utility sector and generating more than 20% of their revenues from coal,
- deriving more than 10% of their revenues from the exploration, extraction, distribution or refining of oil fuels,
- deriving more than 50% of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels,
- deriving more than 50% of their revenues from electricity generation with a GHG intensity of more than 100 g CO₂ e/kWh,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual Sustainable Investment share at the end of the financial year was 75.53 %.

- At least 70% of the Sub-Fund's net asset value has been invested throughout the SubFund's financial year in issuers that pursue business activities that contribute to one or more of the following SDGs: Zero Hunger; Good Health and Well-being; Clean Water and Sanitation; Sustainable Cities and Communities; Climate Action.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual Sustainable Investment share at the end of the financial year was	75.53 %	74.8 %	73.89 %
Confirmation on SDG aligned investments	At least 70% of the Sub-Fund's net asset value has been invested throughout the SubFund's financial year in issuers that pursue business activities that contribute to one or more of the following SDGs: Zero Hunger; Good Health and Well-being; Clean Water and Sanitation; Sustainable Cities and Communities; Climate Action.		
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Share of non-renewable energy consumption and production
- Activities negatively affecting biodiversity-sensitive areas
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Unadjusted gender pay gap
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- GHG intensity
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	53.42 %
C22	Manufacture of rubber and plastic products	7.90 %
C25	Manufacture of fabricated metal products, except machinery and equipment	3.26 %
C26	Manufacture of computer, electronic and optical products	13.22 %
C27	Manufacture of electrical equipment	3.98 %
C28	Manufacture of machinery and equipment n.e.c.	25.06 %
E	WATER SUPPLY; SEWERAGE, WASTE MANAGEMENT AND REMEDIATION ACTIVITIES	24.81 %
E36	Water collection, treatment and supply	15.50 %
E38	Waste collection, treatment and disposal activities; materials recovery	9.31 %
F	CONSTRUCTION	4.04 %
F42	Civil engineering	4.04 %
G	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	9.48 %
G46	Wholesale trade, except of motor vehicles and motorcycles	9.48 %
K	FINANCIAL AND INSURANCE ACTIVITIES	0.04 %
K66	Activities auxiliary to financial services and insurance activities	0.04 %
M	PROFESSIONAL, SCIENTIFIC AND TECHNICAL ACTIVITIES	5.89 %
M71	Architectural and engineering activities; technical testing and analysis	5.89 %
Other	NOT SECTORIZED	2.32 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

- [Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?](#)

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	9.65 %
Climate change adaptation	0.00 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.10 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	12.06 %	6.64 %	7.69 %
Capex	3.06 %	3.59 %	0 %
Opex	2.66 %	1.5 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	12.06 %	6.64 %	7.69 %
Capex	3.06 %	3.59 %	0 %
Opex	2.66 %	1.5 %	0 %

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 18.67% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 44.8% of Sub-Fund assets.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager’s engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI’s strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI’s holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**
The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did this financial product perform compared with the reference benchmark?

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- How did this financial product perform compared with the broad market index?

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Product name:

Allianz High Dividend Asia Pacific Equity

Legal entity identifier: 549300NMGJFNXMUMPO08

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 56.96% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz High Dividend Asia Pacific Equity (the "Sub-Fund") promoted environmental and social characteristics as well as the management of greenhouse gas ("GHG") intensity. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed investments (excluded cash and derivatives) according to the greenhouse gas ("GHG") emissions of investee companies as far as such data was available. Based on this, the Investment Manager managed the Sub-Fund in a way that the GHG intensity of the portfolio was 20.00% lower than the GHG intensity of the Sub-Fund's benchmark. GHG intensity was defined as GHG emissions (scope 1 and 2) per million USD sales of the issuer. GHG emissions per million USD sales was used, as this metrics allows to differentiate between more and less energy efficient issuers. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio GHG intensity data must be available.
- Further, the Investment Manager adhered to a minimum percentage of 2.00% of Sustainable Investments.

A reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund 's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio which is covered by GHG intensity data was 97.1 %.

The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual GHG intensity of the Sub-Fund's portfolio was 65.05 % lower than the GHG intensity of the benchmark at the relevant financial year. The calculation of the GHG intensity is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio which is covered by GHG intensity data was	97.1%	97.68%	91.21%
The actual average GHG intensity of the Sub-Fund's portfolio vs average GHG intensity of the benchmark was lower by	65.05%	75.44%	65.56%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	1.31 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	1.31 %	1.19 %	0.01 %
Capex	0.01 %	0.09 %	0 %
Opex	0 %	0 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	1.31 %	1.19 %	0.01 %
Capex	0.01 %	0.09 %	0 %
Opex	0 %	0 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 15.17% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 40.47% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI 's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Investment Manager has assigned the index "MSCI AC Asia Pacific Excl. Japan Total Return Net" as the Sub-Fund's benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by managing the GHG intensity so that it will be continuously 20% lower than the GHG intensity of the benchmark as described in the section "What investment strategy does this financial product follow?".

- **How did the reference benchmark differ from a broad market index?**

The Sub-Fund's benchmark is a market index.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The actual GHG intensity of the Sub-Fund's portfolio was 65.05 % lower than the GHG intensity of the benchmark at the relevant financial year end. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **How did this financial product perform compared with the reference benchmark?**

01/10/2024 - 30/09/2025	Allianz High Dividend Asia Pacific Equity	Benchmark	Active Return
Performance %	7.26	9.13	-1.87

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did this financial product perform compared with the broad market index?

01/10/2024 - 30/09/2025	Allianz High Dividend Asia Pacific Equity	Benchmark	Active Return
Performance %	7.26	9.13	-1.87

Product name:

Allianz India Equity

Legal entity identifier: 529900DZ16RXF9X8FN04

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 46.45% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz India Equity (the "Sub-Fund") promoted environmental and social characteristics as well as the management of greenhouse gas ("GHG") intensity. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed investments (excluded cash and derivatives) according to the greenhouse gas ("GHG") emissions of investee companies as far as such data was available. Based on this, the Investment Manager managed the Sub-Fund in a way that the GHG intensity of the portfolio was 20.00% lower than the GHG intensity of the Sub-Fund's benchmark. GHG intensity was defined as GHG emissions (scope 1 and 2) per million USD sales of the issuer. GHG emissions per million USD sales was used, as this metrics allows to differentiate between more and less energy efficient issuers. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio GHG intensity data must be available.
- Further, the Investment Manager adhered to a minimum percentage of 10.00% of Sustainable Investments.

A reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 10% of their revenue from thermal coal extraction,

- active within the utility sector and generating more than 20% of their revenues from coal,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio which is covered by GHG intensity data was 91.2 %. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual GHG intensity of the Sub-Fund's portfolio was 62.01 % lower than the GHG intensity of the benchmark at the relevant financial year. The calculation of the GHG intensity is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
RELIANCE INDUSTRIES LIMITED	MANUFACTURING	6.87 %	India

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	46.03 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

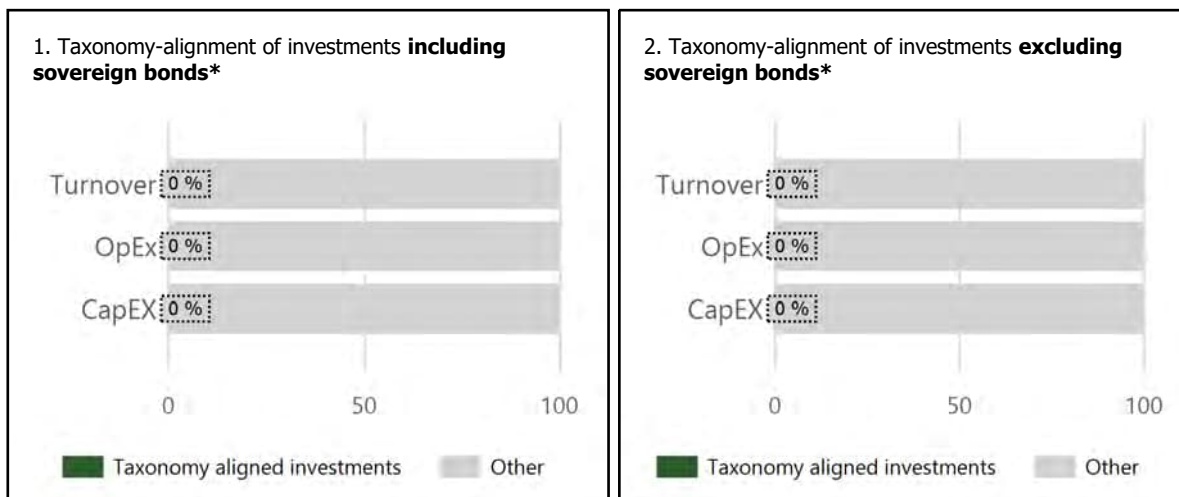

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 0.32% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 46.13% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Investment Manager has assigned the index "MSCI India Total Return Net" as the Sub-Fund's benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by managing the GHG intensity so that it will be continuously 20% lower than the GHG intensity of the benchmark as described in the section "What investment strategy does this financial product follow?".

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did the reference benchmark differ from a broad market index?

The Sub-Fund's benchmark is a market index.

- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

The actual GHG intensity of the Sub-Fund's portfolio was 62.01 % lower than the GHG intensity of the benchmark at the relevant financial year end. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- How did this financial product perform compared with the reference benchmark?

01/10/2024 - 30/09/2025	Allianz India Equity	Benchmark	Active Return
Performance %	-12.65	-13.15	0.50

- How did this financial product perform compared with the broad market index?

Product name:

Allianz Japan Equity

Legal entity identifier: 529900D7K4CJB8ABAW87

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 36% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Japan Equity (the "Sub-Fund") promoted environmental and social characteristics as well as the management of greenhouse gas ("GHG") intensity. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed investments (excluded cash and derivatives) according to the greenhouse gas ("GHG") emissions of investee companies as far as such data was available. Based on this, the Investment Manager managed the Sub-Fund in a way that the GHG intensity of the portfolio was 20.00% lower than the GHG intensity of the Sub-Fund's benchmark. GHG intensity was defined as GHG emissions (scope 1 and 2) per million USD sales of the issuer. GHG emissions per million USD sales was used, as this metrics allows to differentiate between more and less energy efficient issuers. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio GHG intensity data must be available.
- Further, the Investment Manager adhered to a minimum percentage of 5.00% of Sustainable Investments.

A reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio which is covered by GHG intensity data was 98.31%. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual GHG intensity of the Sub-Fund's portfolio was 22.61% lower than the GHG intensity of the benchmark at the relevant financial year. The calculation of the GHG intensity is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **... and compared to previous periods?**

On 02.06.2023, the sustainable investment approach was changed from the Climate Engagement with Outcome (CEWO) to another E/S Strategy (KPI Strategy - Relative). The indicators for measuring compliance with ecological and social characteristics between the investment approaches are only partially comparable. If the indicators for the CEWO are not comparable, they are not included in the table. For information on the performance of the strategy, please refer to the 2023 year-end report (available upon request).

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio which is covered by GHG intensity data was	98.31%	98.28%	93.2%
The actual average GHG intensity of the Sub-Fund's portfolio vs average GHG intensity of the benchmark was lower by	22.61%	31.15%	33.99%
The response rate (companies replied to the engagement questionnaire) was*	-	-	84%
Change of the carbon footprint**	-	-	-11.5%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

* The top 10 carbon emitting issuers are determined periodically. Over the two reference dates Q4/2020 and Q1/2022 the 19 emitters were identified.

** Change of the CO2 emissions of the year 2019 compared to 2021

All investments in sovereign issuers were evaluated with an SRI rating until the sustainable investment approach was changed.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
HITACHI LTD	INFORMATION AND COMMUNICATION	3.71 %	Japan
TOYOTA MOTOR CORP	MANUFACTURING	3.56 %	Japan

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	53.18 %
C10	Manufacture of food products	0.82 %

N77	Rental and leasing activities	0.09 %
N78	Employment activities	1.01 %

R	ARTS, ENTERTAINMENT AND RECREATION	1.03 %
R93	Sports activities and amusement and recreation activities	1.03 %
Other	NOT SECTORIZED	1.44 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?**

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.47 %
Climate change adaptation	0.00 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.12 %
Enabling activities	0.24 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	0.47 %	0.48 %	1.61 %
Capex	0 %	0 %	0 %
Opex	0 %	0 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	0.47 %	0.48 %	1.61 %
Capex	0 %	0 %	0 %
Opex	0 %	0 %	0 %

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 7.01% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 28.52% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI 's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Investment Manager has assigned the index "TOPIX Total Return Net" as the Sub-Fund's benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by managing the GHG intensity so that it will be continuously 20% lower than the GHG intensity of the benchmark as described in the section "What investment strategy does this financial product follow?".

- **How did the reference benchmark differ from a broad market index?**

The Sub-Fund's benchmark is a market index.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The actual GHG intensity of the Sub-Fund's portfolio was 22.61 % lower than the GHG intensity of the benchmark at the relevant financial year end. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **How did this financial product perform compared with the reference benchmark?**

01/10/2024 - 30/09/2025	Allianz Japan Equity	Benchmark	Active Return
Performance %	12.59	17.73	-5.14

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 54.95% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Multi Asset Future (the "Sub-Fund") promoted a broad range of environmental and social characteristics. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe direct investments which were selected with respect to sustainability aspects and other internal funds ("Target Funds") which promote environmental or social characteristics, or which had Sustainable Investments as an objective for at least 90% of the Sub-Fund's assets. Target Funds were counted into the 90% if they disclose according to Art 8 Sustainable Finance Disclosure Regulation ("SFDR") or Art 9 SFDR. Direct investments were counted into the 90% if they were managed according to another approach of the Investment Manager qualifying as Art 8 or 9 SFDR).
- Further, the Investment Manager adhered to a minimum percentage of 5.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the Sub-Fund's assets invested in direct investments which are selected with respect to sustainability aspects and Target Funds which promote environmental or social characteristics, or which have Sustainable Investments as an objective at the end of the financial year was 99.22 %. In case the Investment Manager decides to directly invest in Debt or Equity Securities which are selected with respect to sustainability aspects the adherence to the respective binding element will be reported.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the Sub-Fund's assets invested in direct investments which are selected with respect to sustainability aspects and Target Funds which promote environmental or social characteristics, or which have Sustainable Investments as an objective at the end of the financial year was	99.22 %	99.05 %	97.55 %
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. The exclusion criteria did not apply to Target Funds managed by another Investment Manager and for Target Funds managed by the Investment Manager, but which did not promote environmental or social characteristics or did not have Sustainable Investments as an objective. The Investment Manager would limit this part of the Sub-Fund assets to 30%, so that the exclusion criteria applied to the majority of the Sub-Funds assets. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogeneous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
ALLIANZ GREEN BOND-W EUR	N/A	16.55 %	Luxembourg
ALLIANZ ADVAN FI EUR-WT EUR	N/A	11.92 %	Luxembourg
ALLIANZ GLB SUSTAINBTY-WTEUR	N/A	9.27 %	Luxembourg
ALLIANZ-BE STY SRI GB EQ-WTE	N/A	8.81 %	Luxembourg
ALLIANZ EM MK SRI B-WT H2 EU	N/A	8.47 %	Luxembourg

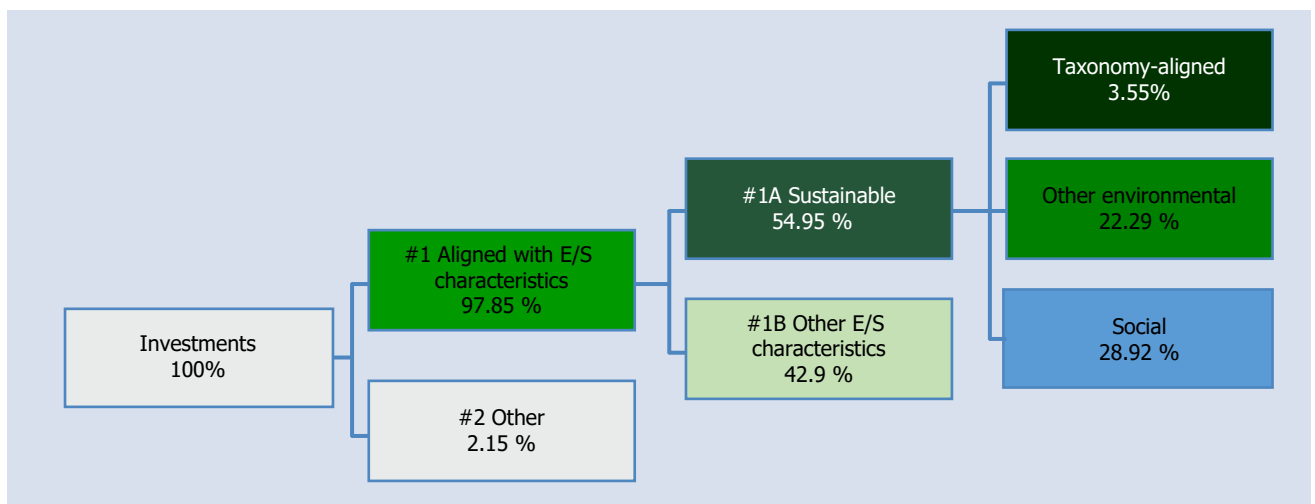

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- [What was the asset allocation?](#)

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- **In which economic sectors were the investments made?**

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 19.98 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	3.08 %
Climate change adaptation	0.05 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.14 %
Enabling activities	1.38 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	3.55 %	4.22 %	4.92 %
Capex	4.54 %	5.52 %	0 %
Opex	3.59 %	4.49 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	4.44 %	5.43 %	5.94 %
Capex	5.68 %	7.11 %	0 %
Opex	4.49 %	5.79 %	0 %

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 22.29% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 28.92% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Pet and Animal Wellbeing

Legal entity identifier: 529900WR8ULGAFRMO18

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 53.6% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Pet and Animal Wellbeing (the "Sub-Fund") promoted a broad range of environmental and social characteristics. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by, excluded direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager adhered to a minimum percentage of 20.00% of Sustainable Investments. Sustainable Investments include a broad range of environmental and social topics, for which the Investment Manager used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the EU Taxonomy objectives. The proprietary methodology to assess the environmental and social contribution was described in the section "What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?" and contained an assessment of the positive contribution to environmental and social contributions as well as an assessment to avoid significant harm to any environmental or social objective.
- Further, the Investment Manager committed to invest minimum 70% of Sub-Fund's net asset value into issuers which, as assessed by the Investment Manager, were not considered to significantly harm any environmental or social objective according to the Sustainable Investment methodology.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does

this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund 's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of assets invested in issuers which have been assessed according to the Sustainable Investments methodology at the end of the financial year was 95.96 %. The calculation of the Sustainable Investments methodology is described below in the sections "What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?" and "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual Sustainable Investment share at the end of the financial year was 53.6 %.

- The actual percentage of investments that pass the assessment to significantly harm environmental or social objectives at the end of the financial year was 2.41 %.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of assets invested in issuers which have been assessed according to the Sustainable Investments methodology at the end of the financial year was	95.96%	98.48%	97.15%
The actual weighted average sustainable investment share of Sub-Fund Assets was	53.6%	55.02%	59.86%
The actual percentage of investments that pass the assessment to not significantly harm environmental or social objectives at the end of the financial year was	2.41%	1.88%	3.54%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
IDEXX LABORATORIES INC	PROFESSIONAL, SCIENTIFIC AND TECHNICAL ACTIVITIES	8.18 %	USA
ZOETIS INC	MANUFACTURING	7.77 %	USA
TRACTOR SUPPLY COMPANY	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	7.04 %	USA
CHEWY INC - CLASS A	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	6.98 %	USA
VIRBAC SA	MANUFACTURING	4.46 %	France
SYMRISE AG	MANUFACTURING	4.01 %	Germany
FRESHPET INC	MANUFACTURING	3.87 %	USA
COLGATE-PALMOLIVE CO	MANUFACTURING	3.78 %	USA
TRUPANION INC	FINANCIAL AND INSURANCE ACTIVITIES	3.67 %	USA
NESTLE SA-REG	MANUFACTURING	3.55 %	USA

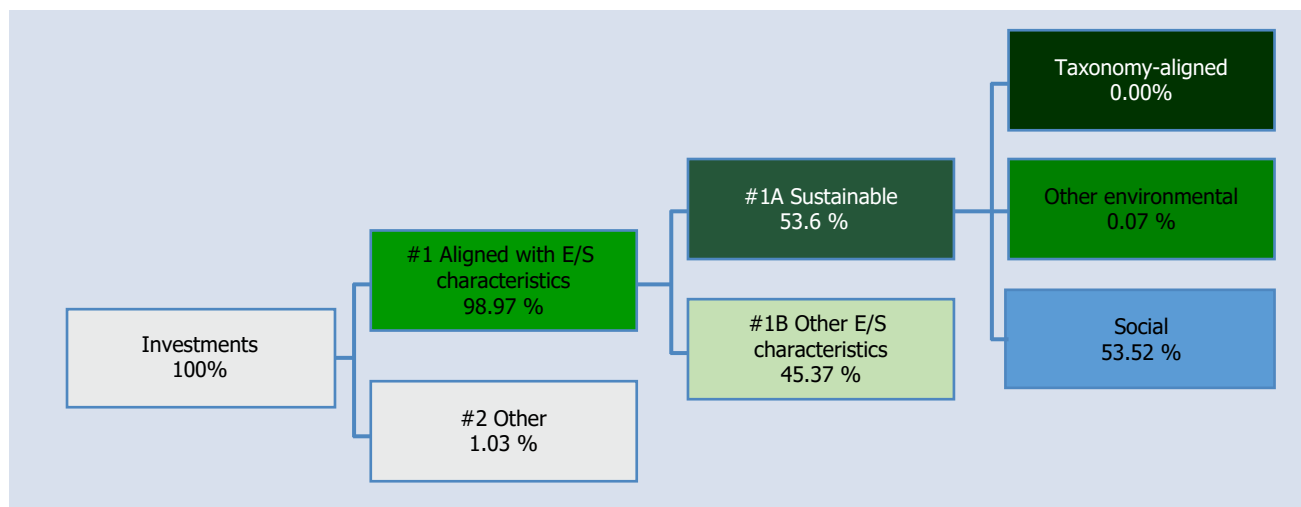

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	50.49 %
C10	Manufacture of food products	13.29 %
C11	Manufacture of beverages	3.60 %
C17	Manufacture of paper and paper products	2.00 %
C20	Manufacture of chemicals and chemical products	9.58 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	19.96 %
C26	Manufacture of computer, electronic and optical products	1.55 %
C27	Manufacture of electrical equipment	0.52 %
G	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	28.71 %
G46	Wholesale trade, except of motor vehicles and motorcycles	11.46 %
G47	Retail trade, except of motor vehicles and motorcycles	17.25 %
K	FINANCIAL AND INSURANCE ACTIVITIES	7.28 %
K65	Insurance, reinsurance and pension funding, except compulsory social security	7.17 %
K66	Activities auxiliary to financial services and insurance activities	0.11 %
M	PROFESSIONAL, SCIENTIFIC AND TECHNICAL ACTIVITIES	12.61 %
M75	Veterinary activities	12.61 %
Other	NOT SECTORIZED	0.92 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?**

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	0 %	0.08 %	0.02 %
Capex	0.06 %	0.38 %	0 %
Opex	0 %	0.12 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	0 %	0.08 %	0.02 %
Capex	0.06 %	0.38 %	0 %
Opex	0 %	0.12 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 0.07% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 53.52% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did this financial product perform compared with the broad market index?

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Product name:

Allianz Positive Change

Legal entity identifier: 529900BL3ET622OAU93

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 74.22% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Positive Change (the "Sub-Fund") promoted environmental and social characteristics and one or more of the United Nations Sustainable Development Goals ("SDGs") or other Sustainable Investment objectives. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.

- In a second step, the Investment Manager selected from the remaining investment universe mainly those issuers providing products or services suitable to facilitate positive environmental and social contributions. Environmental or social contributions include a broad range of topics, for which the Investment Manager used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the EU Taxonomy objectives. The proprietary methodology to assess the environmental and social contribution was described in the section "What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?" and contained an assessment of the positive contribution to environmental and social contributions as well as an assessment to avoid significant harm to any environmental or social objective.

- Further, the Investment Manager adhered to a minimum percentage of 50.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the sustainable investment objective the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 10% of their revenue from thermal coal extraction,

- active within the utility sector and generating more than 20% of their revenues from coal,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual Sustainable Investment share at the end of the financial year was 74.22 %.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual Sustainable Investment share at the end of the financial year was	74.22 %	73.78 %	85.85 %
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Share of non-renewable energy consumption and production
- Activities negatively affecting biodiversity-sensitive areas
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Unadjusted gender pay gap
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- GHG intensity
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
A	AGRICULTURE, FORESTRY AND FISHING	0.62 %
A01	Crop and animal production, hunting and related service activities	0.62 %

Other	NOT SECTORIZED	0.62 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

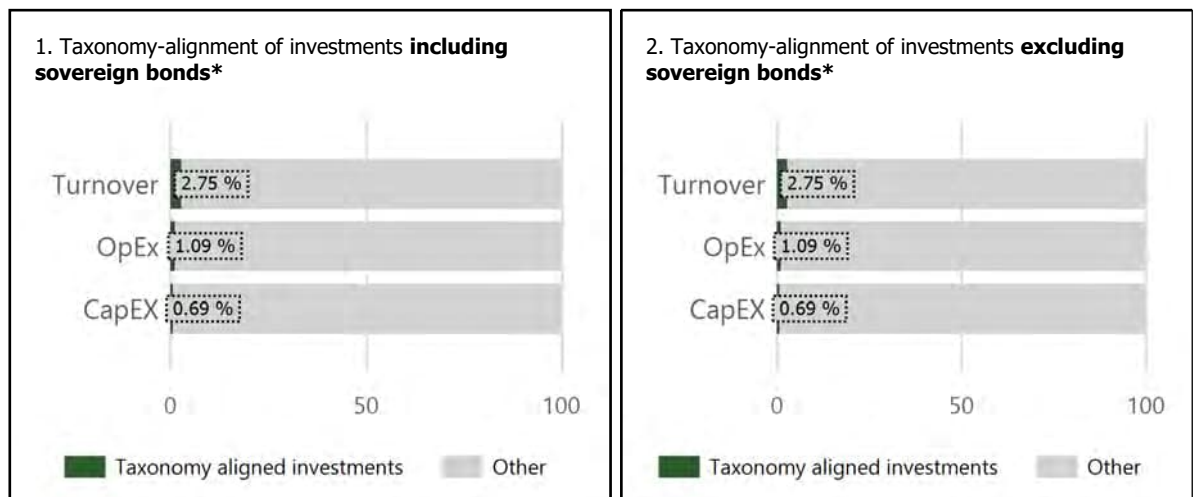

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.49 %
Climate change adaptation	0.01 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.32 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	2.75 %	1.69 %	7.7 %
Capex	0.69 %	0.7 %	0 %
Opex	1.09 %	0.27 %	0 %

Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	2.75 %	1.69 %	7.7 %
Capex	0.69 %	0.7 %	0 %
Opex	1.09 %	0.27 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 21.84% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 49.62% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Selection Fixed Income

Legal entity identifier: 549300GHHV2E38CY6D14

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 18.86% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Selection Fixed Income (the "Sub-Fund") promoted a broad range of environmental and social characteristics. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe direct investments which were selected with respect to sustainability aspects and other funds ("Target Funds") which promote environmental or social characteristics, or which had Sustainable Investments as an objective for at least 70% of the Sub-Fund's assets. Target Funds were counted into the 70% if they disclose according to Art 8 Sustainable Finance Disclosure Regulation ("SFDR") or Art 9 SFDR. Direct investments were counted into the 70% if they were managed according to another approach of the Investment Manager qualifying as Art 8 or 9 SFDR).

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the Sub-Fund's assets invested in direct investments which are selected with respect to sustainability aspects and Target Funds which promote environmental or social characteristics, or which have Sustainable Investments as an objective at the end of the financial year was 84.93 %. In case the Investment Manager decides to directly invest in Debt or Equity Securities which are selected with respect to sustainability aspects the adherence to the respective binding element will be reported.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024
The actual percentage of the Sub-Fund's assets invested in direct investments which are selected with respect to sustainability aspects and Target Funds which promote environmental or social characteristics, or which have Sustainable Investments as an objective at the end of the financial year was	84.93 %	78.88 %
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year	

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Sub-Fund considers for the part, which are counted as sustainable investments, PAI indicators as part of the DNSH assessment. The Sub-Fund does however not consider PAI indicators as binding element of the Sub-Fund.

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
ALLIANZ-US SHDU HI B-WTH2EUR	N/A	7.97 %	Luxembourg

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 21.35 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	2.05 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.07 %
Enabling activities	0.66 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024
Turnover	2.1 %	1.41 %
Capex	2.54 %	2.01 %
Opex	1.77 %	1.59 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024
Turnover	2.67 %	1.99 %
Capex	3.23 %	2.85 %
Opex	2.26 %	2.25 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 3.87% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 12.86% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these

investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Selection Small and Mid Cap Equity

Legal entity identifier: 529900F8INOFIY57KZ10

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 28.27% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Selection Small and Mid Cap Equity (the "Sub-Fund") promoted a broad range of environmental and social characteristics. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe direct investments which were selected with respect to sustainability aspects and other funds ("Target Funds") which promote environmental or social characteristics, or which had Sustainable Investments as an objective for at least 70% of the Sub-Fund's assets. Target Funds were counted into the 70% if they disclose according to Art 8 Sustainable Finance Disclosure Regulation ("SFDR") or Art 9 SFDR. Direct investments were counted into the 70% if they were managed according to another approach of the Investment Manager qualifying as Art 8 or 9 SFDR).

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the Sub-Fund's assets invested in direct investments which are selected with respect to sustainability aspects and Target Funds which promote environmental or social characteristics, or which have Sustainable Investments as an objective at the end of the financial year was 99.85 %. In case the Investment Manager decides to directly invest in Debt or Equity Securities which are selected with respect to sustainability aspects the adherence to the respective binding element will be reported.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024
The actual percentage of the Sub-Fund's assets invested in direct investments which are selected with respect to sustainability aspects and Target Funds which promote environmental or social characteristics, or which have Sustainable Investments as an objective at the end of the financial year was	99.85 %	89.53 %
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year	

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Sub-Fund considers for the part, which are counted as sustainable investments, PAI indicators as part of the DNSH assessment. The Sub-Fund does however not consider PAI indicators as binding element of the Sub-Fund.

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
INDEPEN AM SIC EUR SML-X EUR	N/A	15.43 %	Luxembourg
ECHIQUIER ENTREPRENEURS-G	N/A	11.86 %	France
SEXTANT PME-I	N/A	10.47 %	France
ODDO BHF ACT SMALL CAP-CREUR	N/A	10.41 %	France
DNCA ACT EUR PME-F EUR ACC	N/A	10.30 %	France

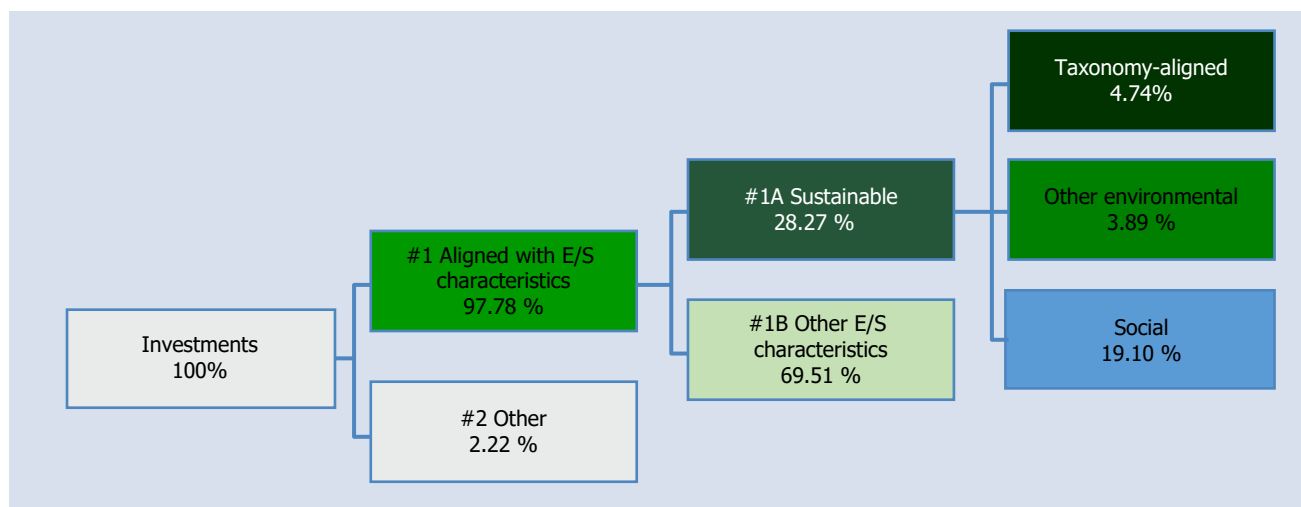

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund’s investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

Other	NOT SECTORIZED	5.92 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	4.13 %
Climate change adaptation	0.14 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.37 %
Enabling activities	1.64 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024
Turnover	4.74 %	2.87 %
Capex	5.86 %	3.63 %
Opex	3.74 %	2.07 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024
Turnover	4.74 %	2.87 %
Capex	5.86 %	3.63 %
Opex	3.74 %	2.07 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 3.89% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 19.1% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these

investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Smart Energy

Legal entity identifier: 5299001HEJY28N2P7I26

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 75.88% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Smart Energy (the "Sub-Fund") promoted environmental and social characteristics and one or more of the United Nations Sustainable Development Goals ("SDGs") or other Sustainable Investment objectives. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe mainly those issuers providing products or services suitable to facilitate positive environmental and social contributions. Environmental or social contributions include a broad range of topics, for which the Investment Manager used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the EU Taxonomy objectives. The proprietary methodology to assess the environmental and social contribution was described in the section "What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?" and contained an assessment of the positive contribution to environmental and social contributions as well as an assessment to avoid significant harm to any environmental or social objective.
- Further, the Investment Manager adhered to a minimum percentage of 50.00% of Sustainable Investments.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the sustainable investment objective the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco,
- deriving more than 30% of their revenues from upstream oil or power generation from this fuel.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual Sustainable Investment share at the end of the financial year was 75.88 %.

- At least 70% of the Sub-Fund's net asset value has been invested throughout the SubFund's financial year in issuers that pursue business activities that contribute to one or more of the following SDGs: Affordable and Clean Energy; Industry, Innovation and Infrastructure; Sustainable Cities and Communities; Responsible Consumption and Production; Climate Action.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual Sustainable Investment share at the end of the financial year was	75.88 %	66.18 %	72.94 %
Confirmation on SDG aligned investments	Confirmation that at least 70% of the Sub-Fund's net asset value has been invested throughout the SubFund's financial year in issuers that pursue business activities that contribute to one or more of the following SDGs: Affordable and Clean Energy; Industry, Innovation and Infrastructure; Sustainable Cities and Communities; Responsible Consumption and Production; Climate Action.		
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Share of non-renewable energy consumption and production
- Activities negatively affecting biodiversity-sensitive areas
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Unadjusted gender pay gap
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- GHG intensity
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
FIRST SOLAR INC	MANUFACTURING	3.82 %	USA
INFINEON TECHNOLOGIES AG	MANUFACTURING	3.72 %	Germany
IBERDROLA SA	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	3.58 %	Spain
SCHNEIDER ELECTRIC SE	MANUFACTURING	3.48 %	USA
AIR LIQUIDE SA	MANUFACTURING	3.42 %	France
ENEL SPA	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	3.33 %	Italy
NEXANS SA	MANUFACTURING	3.20 %	France
NEXTERA ENERGY INC	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	3.20 %	USA
SSE PLC	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	3.11 %	United Kingdom
AMPHENOL CORP-CL A	MANUFACTURING	3.04 %	USA
HAIER SMART HOME CO LTD-H	MANUFACTURING	2.78 %	People's Republic of China
ITRON INC	MANUFACTURING	2.74 %	USA
BOLIDEN AB	MANUFACTURING	2.73 %	Sweden
RENESAS ELECTRONICS CORP	MANUFACTURING	2.70 %	Japan
ROCKWOOL A/S-B SHS	MANUFACTURING	2.69 %	Denmark

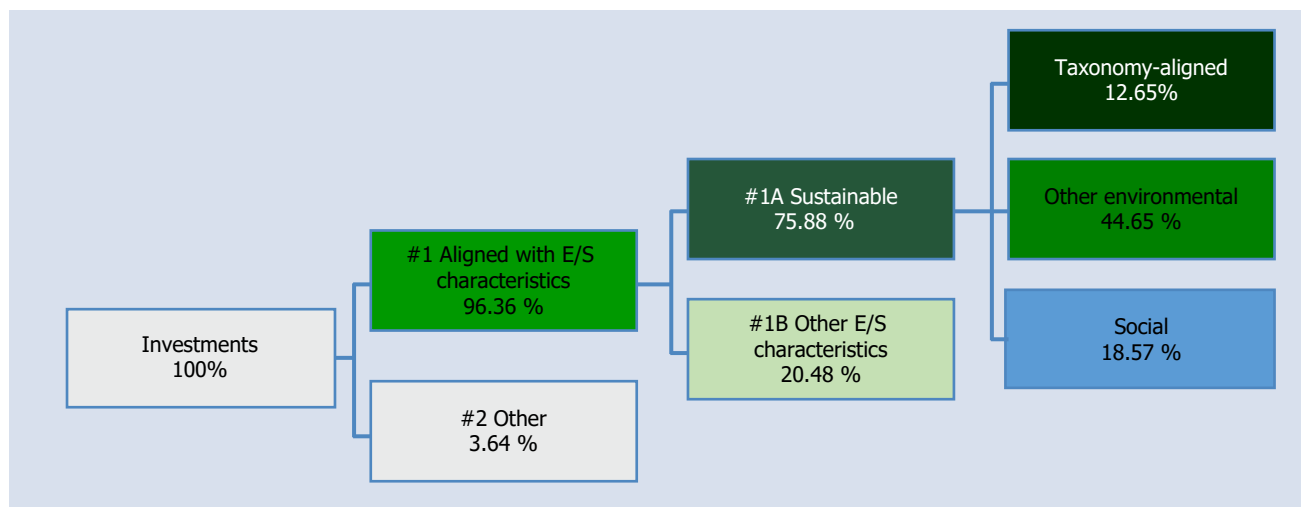

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	76.68 %
C20	Manufacture of chemicals and chemical products	4.20 %
C23	Manufacture of other non-metallic mineral products	2.51 %
C24	Manufacture of basic metals	5.29 %
C25	Manufacture of fabricated metal products, except machinery and equipment	4.50 %
C26	Manufacture of computer, electronic and optical products	31.27 %
C27	Manufacture of electrical equipment	22.39 %
C28	Manufacture of machinery and equipment n.e.c.	1.68 %
C29	Manufacture of motor vehicles, trailers and semi-trailers	3.33 %
C30	Manufacture of other transport equipment	1.51 %
D	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	18.07 %
D35	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	18.07 %
G	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	1.61 %
G46	Wholesale trade, except of motor vehicles and motorcycles	1.61 %
K	FINANCIAL AND INSURANCE ACTIVITIES	0.05 %
K66	Activities auxiliary to financial services and insurance activities	0.05 %
Other	NOT SECTORIZED	3.58 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?**

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	11.62 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	7.86 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	12.65 %	18.54 %	23.83 %
Capex	18.27 %	17.19 %	0 %
Opex	17.05 %	14.79 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	12.65 %	18.54 %	23.83 %
Capex	18.27 %	17.19 %	0 %
Opex	17.05 %	14.79 %	0 %

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 44.65% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 18.57% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did this financial product perform compared with the broad market index?

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Product name:

Allianz Social Conviction Equity

Legal entity identifier: 529900RICS54KA4ZV927

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 63.23% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Social Conviction Equity (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- Further, the Investment Manager adhered to a minimum percentage of 50% of Sustainable Investments, a minimum percentage of 30.00% of socially Sustainable Investments, and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does

this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 10% of their revenue from thermal coal extraction,

- active within the utility sector and generating more than 20% of their revenues from coal,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The investment universe has been reduced by excluding at least 20.00% of the total number of potential issuers compared to the investible issuers according to the Sub-Fund's general investment strategy as described in the prospectus.

- The actual percentage of the portfolio with a proprietary sustainability score of 2 or more was 99.98 % at the financial year end. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024
The actual percentage of the portfolio with a proprietary sustainability score was	99.98%	99.86%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year	

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
SAP SE	INFORMATION AND COMMUNICATION	5.44 %	Germany

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	2.48 %
B09	Mining support service activities	2.48 %
C	MANUFACTURING	43.13 %
C10	Manufacture of food products	2.41 %

O84.1	Administration of the State and the economic and social policy of the community	0.26 %
Other	NOT SECTORIZED	0.35 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0.26 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	7.34 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.34 %
Enabling activities	5.91 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024
Turnover	7.73 %	4.73 %
Capex	12.06 %	9.65 %
Opex	9.87 %	7.14 %

Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024
Turnover	7.75 %	4.73 %
Capex	12.09 %	9.66 %
Opex	9.89 %	7.14 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 7.66% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 47.66% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz SRI Multi Asset 75

Legal entity identifier: 529900A943LOFBAFNR54

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 52.96% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz SRI Multi Asset 75 (the "Sub-Fund") promoted a broad range of environmental and social characteristics. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe direct investments which were selected with respect to sustainability aspects and other funds ("Target Funds") which promote environmental or social characteristics, or which had Sustainable Investments as an objective for at least 80% of the Sub-Fund's assets. Target Funds were counted into the 80% if they disclose according to Art 8 Sustainable Finance Disclosure Regulation ("SFDR") or Art 9 SFDR. Direct investments were counted into the 80% if they were managed according to another approach of the Investment Manager qualifying as Art 8 or 9 SFDR).
- Further, the Investment Manager adhered to a minimum percentage of 20.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**
To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:
 - The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:
 - severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
 - developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
 - deriving more than 10% of their revenues from (i) weapons or (ii) military equipment and military services,
 - involved in the production of tobacco or tobacco products (e-cigarettes and essential parts thereof included), or deriving more than 5% of their revenues from the distribution of tobacco,
 - deriving more than 10% of their revenue from gambling,
 - involved in coal extraction or with expansion plans in coal mining or coal-based power generation,
 - deriving more than 1.00% of their revenues from exploration, mining, distribution or refining of thermal coal,
 - involved in non-conventional oil & gas (shale gas, shale oil, tar sands, arctic drilling, deep water drilling, extra heavy oil) extraction,
 - active in coal sector (starting from 1st of January 2030),
 - active in the conventional oil and gas extraction sector with (i) less than or equal to 20% of CapEx for renewable energy activities or (ii) has expansion or exploration plans in relation to fossil fuels,
 - deriving more than 10% of their revenues from the exploration, extraction, distribution or refining of oil fuels,
 - deriving more than 50% of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels,
 - active in the electricity generation with a carbon intensity above the following thresholds
Year 2023: 346 gCO₂/kWh
Year 2024: 312 gCO₂/kWh
Year 2025: 279 gCO₂/kWh
Year 2026: 247 gCO₂/kWh
Year 2027: 216 gCO₂/kWh
Year 2028: 186 gCO₂/kWh
Year 2029: 156 gCO₂/kWh
Year 2030: 128 gCO₂/kWh

or if carbon intensity data is not available, involved in (i) more than 5% of electricity production based on coal or (ii) more than 20% of electricity production based on oil and gas,

- active within the utility sector and generating more than 20% of their revenues from coal,
- deriving more than 50% of their revenues from electricity generation with a GHG intensity of more than 100 g CO₂ e/kWh,
- active in the mining sector and not complying with the United Nations Guiding Principles on Business and Human Rights (UNGP) or the OECD Guidelines on Multinational Enterprises.
- active in the palm oil industry and that are not a member of the Roundtable on Sustainable Palm Oil (RSPO), an international sector organization that aims to promote the sustainable cultivation of palm oil,
- active in the soy industry and that are not a member of the Roundtable on Responsible Soy (RTRS) an international sector organization that promotes the production, trade and use of responsible soy, through collaboration with all parties in the soy value chain, from production to consumption.

The Investment Manager will not actively commercialize Exchange Traded Funds (ETF), Exchange Traded Commodities (ETC) and Exchange Traded Notes (ETN) type products with agricultural commodity derivatives in their portfolio, nor investment products with agricultural commodity derivatives in their portfolio that involve speculation at the expense of agricultural and food commodities.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria report as well as in the pre-contractual information.

- The actual percentage of the Sub-Fund's assets invested in direct investments which are selected with respect to sustainability aspects and Target Funds which promote environmental or social characteristics, or which have Sustainable Investments as an objective at the end of the financial year was 91.85 %. In case the Investment Manager decides to directly invest in Debt or Equity Securities which are selected with respect to sustainability aspects the adherence to the respective binding element will be reported.

- ... and compared to previous periods?

Indicator	09.2025	09.2024	09.2023
The actual percentage of the Sub-Fund's assets invested in direct investments which are selected with respect to sustainability aspects and Target Funds which promote environmental or social characteristics, or which have Sustainable Investments as an objective at the end of the financial year was	91.85 %	92.43 %	97.45 %
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. The exclusion criteria did not apply to Target Funds managed by another Investment Manager and for Target Funds managed by the Investment Manager, but which did not promote environmental or social characteristics or did not have Sustainable Investments as an objective. The Investment Manager would limit this part of the Sub-Fund assets to 30%, so that the exclusion criteria applied to the majority of the Sub-Funds assets. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogeneous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity

- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
MICROSOFT CORP	INFORMATION AND COMMUNICATION	3.33 %	USA

UNITEDHEALTH GROUP INC	FINANCIAL AND INSURANCE ACTIVITIES	0.85 %	USA

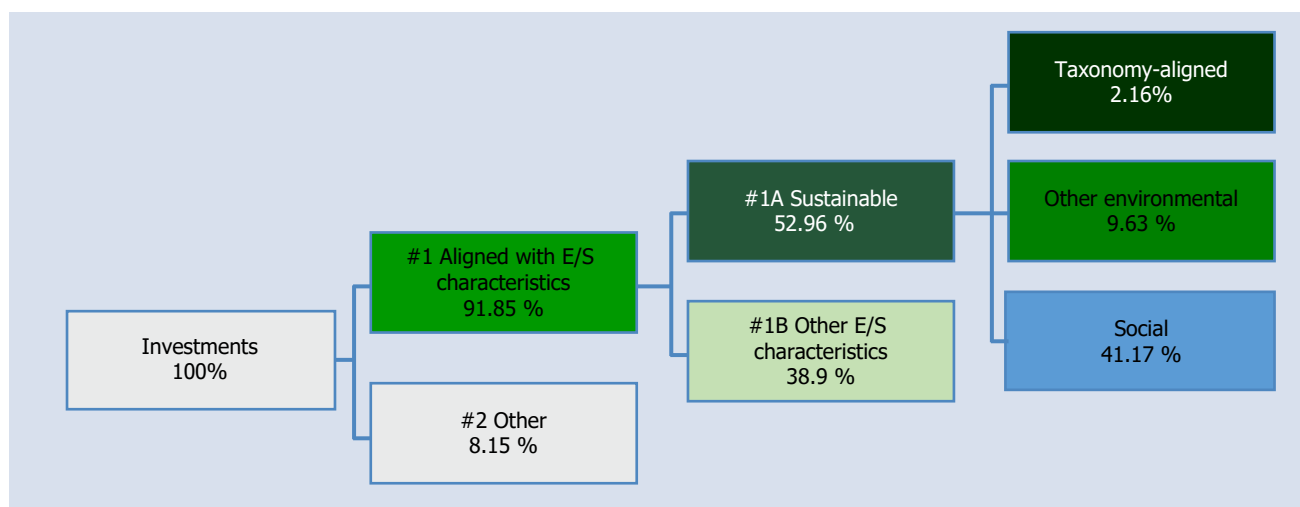

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
A	AGRICULTURE, FORESTRY AND FISHING	0.13 %
A01	Crop and animal production, hunting and related service activities	0.13 %
B	MINING AND QUARRYING	1.35 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 4.93 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

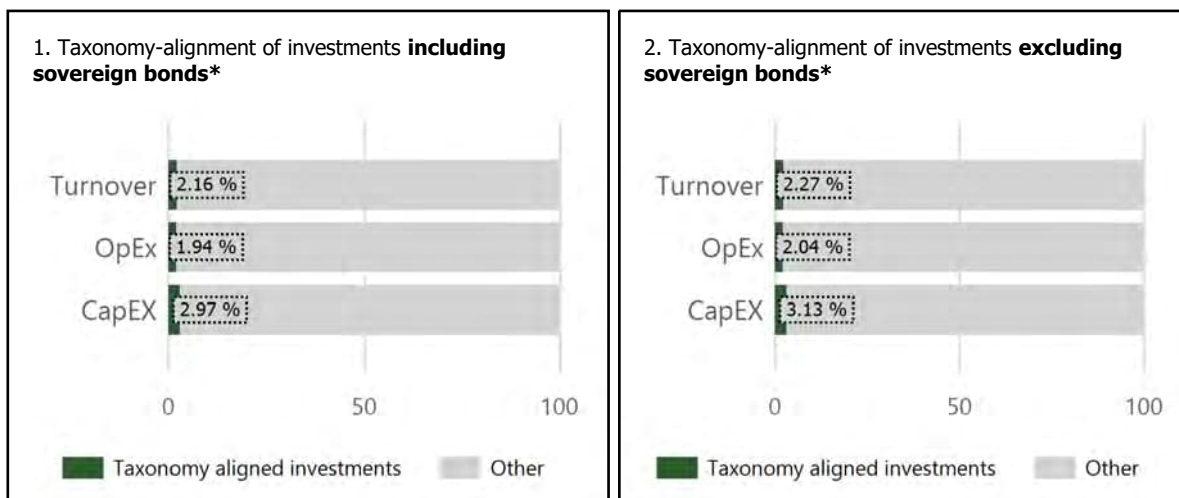

Yes

In fossil gas In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	2.37 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.22 %
Enabling activities	0.72 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	2.16 %	1.1 %	1.46 %
Capex	2.97 %	1.86 %	0 %
Opex	1.94 %	1.45 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	2.27 %	1.19 %	1.64 %
Capex	3.13 %	2.01 %	0 %
Opex	2.04 %	1.57 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 9.63% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 41.17% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager’s engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI’s strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI’s holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks
are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Product name:

Allianz Strategy Select 30

Legal entity identifier: 529900NYTK2L7H470184

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 25.01% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Strategy Select 30 (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- Further, the Investment Manager adhered to a minimum percentage of 3.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does

this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 10% of their revenue from thermal coal extraction,

- active within the utility sector and generating more than 20% of their revenues from coal,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The actual percentage of the portfolio with a proprietary sustainability score of 1 or more was 99.07 % at the financial year end. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	2.98 %
C10	Manufacture of food products	0.36 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.46 %
C27	Manufacture of electrical equipment	1.00 %
C29	Manufacture of motor vehicles, trailers and semi-trailers	1.15 %
D	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	1.86 %
D35	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	1.86 %
F	CONSTRUCTION	0.46 %
F42	Civil engineering	0.46 %
H	TRANSPORTATION AND STORAGE	0.48 %
H49	Land transport and transport via pipelines	0.48 %

K66	Activities auxiliary to financial services and insurance activities	0.67 %
O	PUBLIC ADMINISTRATION AND DEFENCE; COMPULSORY SOCIAL SECURITY	49.25 %
O84	Public administration and defence; compulsory social security, from which:	49.25 %
O84.1	Administration of the State and the economic and social policy of the community	49.25 %
U	ACTIVITIES OF EXTRATERRITORIAL ORGANISATIONS AND BODIES	1.38 %
U99	ACTIVITIES OF EXTRATERRITORIAL ORGANISATIONS AND BODIES	1.38 %
Other	NOT SECTORIZED	3.27 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 52.01 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

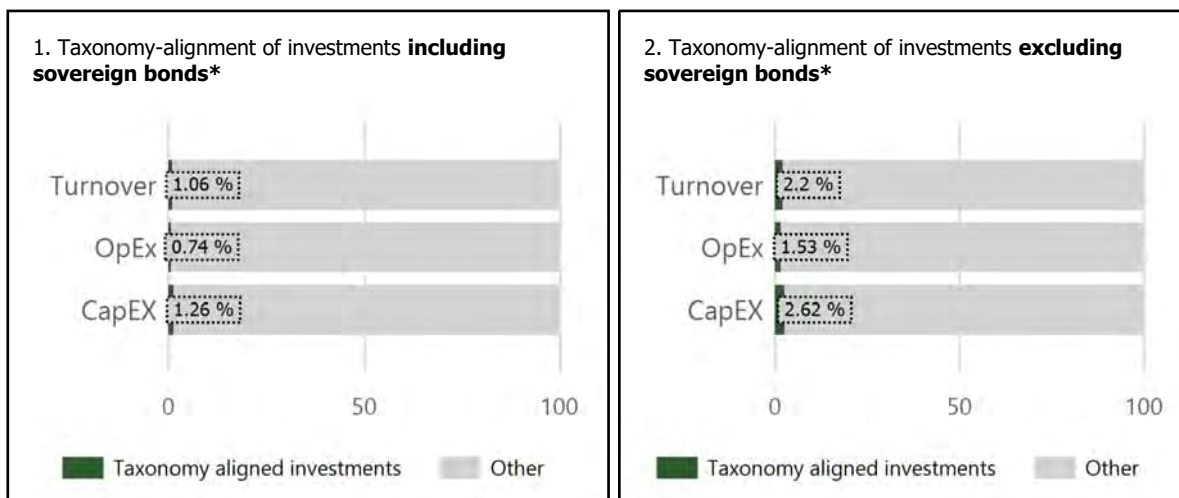

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

- Yes
 - In fossil gas
 - In nuclear energy
- No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	1.00 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.01 %
Enabling activities	0.44 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 5.7% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 18.25% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-

through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Strategy Select 50

Legal entity identifier: 549300SO8FOHM33Y9L46

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 25.86% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Strategy Select 50 (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- Further, the Investment Manager adhered to a minimum percentage of 3.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does

this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the
environmental or social
characteristics promoted
by the financial product
are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 10% of their revenue from thermal coal extraction,

- active within the utility sector and generating more than 20% of their revenues from coal,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The actual percentage of the portfolio with a proprietary sustainability score of 1 or more was 99.06 % at the financial year end. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	3.02 %
C10	Manufacture of food products	0.37 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.47 %
C27	Manufacture of electrical equipment	1.02 %
C29	Manufacture of motor vehicles, trailers and semi-trailers	1.16 %

Other	NOT SECTORIZED	3.45 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 50.58 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

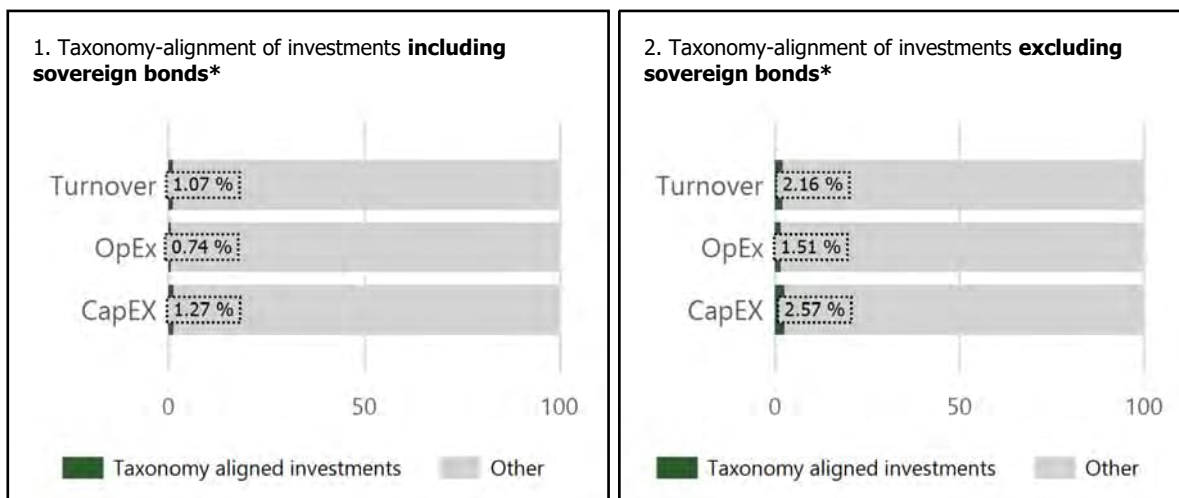

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

- Yes
 - In fossil gas
 - In nuclear energy
- No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	1.01 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.01 %
Enabling activities	0.45 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 5.75% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 19.04% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-

through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Strategy Select 75

Legal entity identifier: 549300MJH0WU5BY1TM44

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 26.05% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Strategy Select 75 (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- Further, the Investment Manager adhered to a minimum percentage of 3.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does

this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the
environmental or social
characteristics promoted
by the financial product
are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 10% of their revenue from thermal coal extraction,

- active within the utility sector and generating more than 20% of their revenues from coal,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The actual percentage of the portfolio with a proprietary sustainability score of 1 or more was 99.04 % at the financial year end. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	3.11 %
C10	Manufacture of food products	0.39 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	0.48 %
C27	Manufacture of electrical equipment	1.04 %
C29	Manufacture of motor vehicles, trailers and semi-trailers	1.20 %
D	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	1.93 %
D35	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	1.93 %
F	CONSTRUCTION	0.48 %
F42	Civil engineering	0.48 %
H	TRANSPORTATION AND STORAGE	0.50 %
H49	Land transport and transport via pipelines	0.50 %
J	INFORMATION AND COMMUNICATION	0.89 %

K66	Activities auxiliary to financial services and insurance activities	0.93 %
O	PUBLIC ADMINISTRATION AND DEFENCE; COMPULSORY SOCIAL SECURITY	47.52 %
O84	Public administration and defence; compulsory social security, from which:	47.52 %
O84.1	Administration of the State and the economic and social policy of the community	47.52 %
U	ACTIVITIES OF EXTRATERRITORIAL ORGANISATIONS AND BODIES	1.44 %
U99	ACTIVITIES OF EXTRATERRITORIAL ORGANISATIONS AND BODIES	1.44 %
Other	NOT SECTORIZED	3.09 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 50.4 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

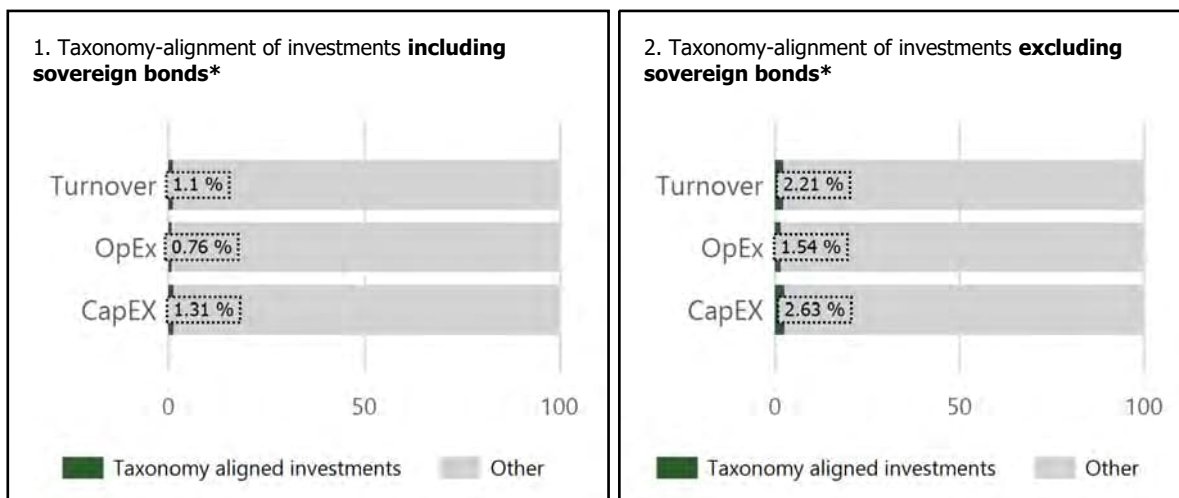

Yes

In fossil gas In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	1.04 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.01 %
Enabling activities	0.46 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 5.94% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 19.01% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-

through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Strategy4Life Europe 40

Legal entity identifier: 529900VGMX20P6DTP861

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 26.99% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Strategy4Life Europe 40 (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The actual percentage of the portfolio with a proprietary sustainability score of 1 or more was 97.97 % at the financial year end. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- **... and compared to previous periods?**

On 28.09.2023, the sustainable investment approach was changed from the Climate Engagement with Outcome (CEWO) to another E/S Strategy (KPI Strategy - Absolute Threshold). The indicators for measuring compliance with ecological and social characteristics between the investment approaches are only partially comparable. If the indicators for the CEWO are not comparable, they are not included in the table. For information on the performance of the strategy, please refer to the 2023 year-end report (available upon request).

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a proprietary sustainability score was	97.97%	97.51%	96.13%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 49.27 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	1.07 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.01 %
Enabling activities	0.46 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	1.13 %	0 %	0 %
Capex	1.35 %	0 %	0 %
Opex	0.76 %	0 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	2.22 %	0 %	0 %
Capex	2.66 %	0 %	0 %
Opex	1.5 %	0 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 6.23% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 19.64% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager’s engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI’s strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI’s holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks

are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Product name:

Allianz Systematic Enhanced US Equity

Legal entity identifier: 5299002WOGP7C2R2FD60

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 59.94% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Systematic Enhanced US Equity (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step, the Investment Manager identifies those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at class 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- In a second step, excluded direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- Further, the Investment Manager adhered to a minimum percentage of 25.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund’s financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The investment universe has been reduced by excluding at least 20.00% of the total number of potential issuers compared to the investible issuers according to the Sub-Fund’s general investment strategy as described in the prospectus.

- The actual percentage of the portfolio with a proprietary sustainability score of 1 or more was 100 % at the financial year end. The scoring process is described within the section “What investment strategy does this financial product follow?” in the precontractual document of the fund. The basis for the calculation is the Sub-Fund’s net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a proprietary sustainability score was	100%	99.23%	99.02%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country

JOHNSON & JOHNSON	MANUFACTURING	0.91 %	USA

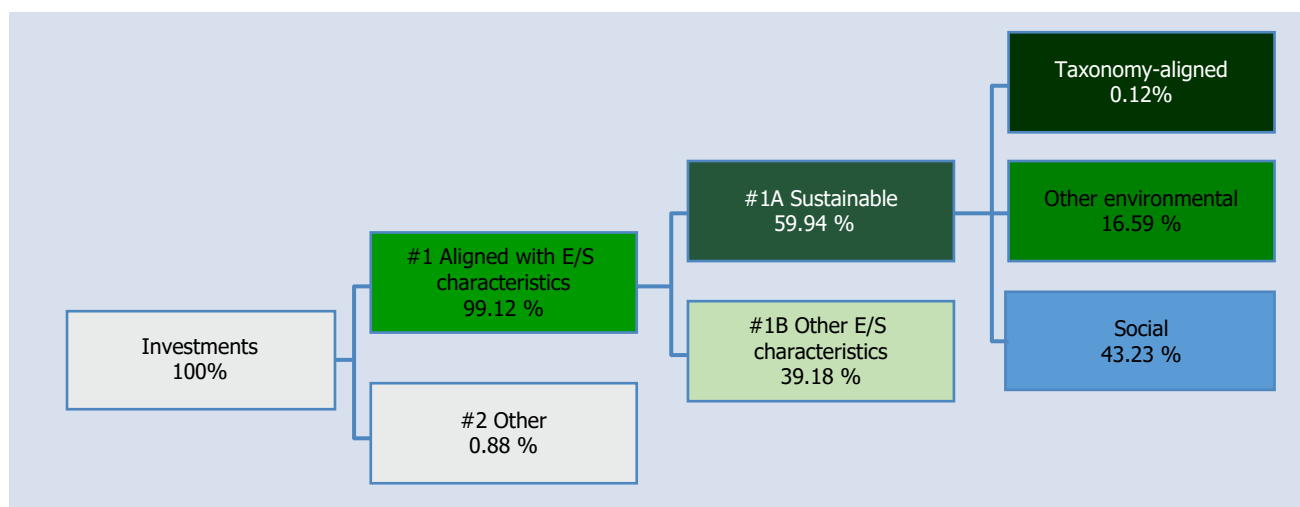

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

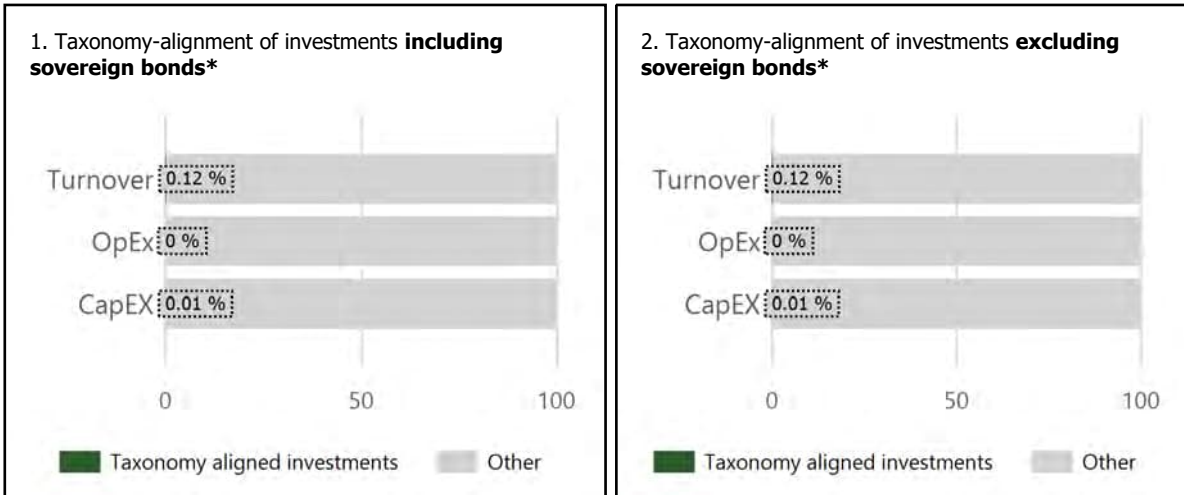

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.12 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.05 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	0.12 %	0.32 %	0.53 %
Capex	0.01 %	0.21 %	0 %
Opex	0 %	0.02 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	0.12 %	0.32 %	0.53 %
Capex	0.01 %	0.21 %	0 %
Opex	0 %	0.02 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 16.59% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 43.23% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these

investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Target Maturity Euro Bond I

Legal entity identifier: 529900AGQHNHIYLXHR90

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 44.49% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Target Maturity Euro Bond I (the "Sub-Fund") promoted environmental and social characteristics as well as the management of greenhouse gas ("GHG") intensity. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed investments (excluded cash and derivatives) according to the greenhouse gas ("GHG") emissions of investee companies as far as such data was available. Based on this, the Investment Manager managed the Sub-Fund in a way that the GHG intensity of the portfolio was 20.00% lower than the GHG intensity of the Sub-Fund's benchmark. GHG intensity was defined as GHG emissions (scope 1 and 2) per million USD sales of the issuer. GHG emissions per million USD sales was used, as this metrics allows to differentiate between more and less energy efficient issuers. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio GHG intensity data must be available.
- Further, the Investment Manager adhered to a minimum percentage of 5.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

A reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does

this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 10% of their revenue from thermal coal extraction,

- active within the utility sector and generating more than 20% of their revenues from coal,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio which is covered by GHG intensity data was 96.33%. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual GHG intensity of the Sub-Fund's portfolio was 59.03% lower than the GHG intensity of the benchmark at the relevant financial year. The calculation of the GHG intensity is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio which is covered by GHG intensity data was	96.33%	96.24%	93.98%
The actual average GHG intensity of the Sub-Fund's portfolio vs average GHG intensity of the benchmark was lower by	59.03%	72.42%	71.94%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation
describes the share of
investments in specific
assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	29.27 %
C10	Manufacture of food products	1.54 %

Other	NOT SECTORIZED	1.82 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

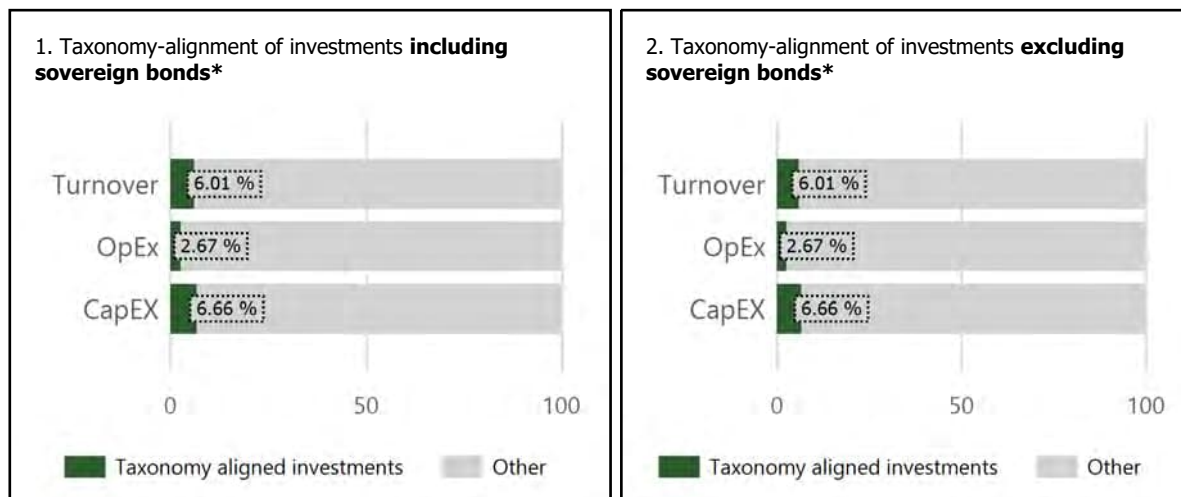

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	4.19 %
Climate change adaptation	0.85 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.01 %
Enabling activities	2.30 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	6.01 %	2.56 %	1.1 %
Capex	6.66 %	3.43 %	0 %
Opex	2.67 %	2.52 %	0 %

Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	6.01 %	2.56 %	1.1 %
Capex	6.66 %	3.43 %	0 %
Opex	2.67 %	2.52 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 7.85% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 29.5% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Investment Manager has assigned the index "ICE BofA Euro Corporate Index" as the Sub-Fund's benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by managing the GHG intensity so that it will be continuously 20% lower than the GHG intensity of the benchmark as described in the section "What investment strategy does this financial product follow?".

- **How did the reference benchmark differ from a broad market index?**

The Sub-Fund's benchmark is a market index.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The actual GHG intensity of the Sub-Fund's portfolio was 59.03 % lower than the GHG intensity of the benchmark at the relevant financial year end. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **How did this financial product perform compared with the reference benchmark?**

Benchmark is only used in connection with the measurement of Sub-Fund's GHG intensity.

- **How did this financial product perform compared with the broad market index?**

Benchmark is only used in connection with the measurement of Sub-Fund's GHG intensity.

Reference benchmarks
are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Target Maturity Euro Bond II

Legal entity identifier: 529900Q9BL9FG9DCDZ05

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 43.12% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Target Maturity Euro Bond II (the "Sub-Fund") promoted environmental and social characteristics as well as the management of greenhouse gas ("GHG") intensity. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed investments (excluded cash and derivatives) according to the greenhouse gas ("GHG") emissions of investee companies as far as such data was available. Based on this, the Investment Manager managed the Sub-Fund in a way that the GHG intensity of the portfolio was 20.00% lower than the GHG intensity of the Sub-Fund's benchmark. GHG intensity was defined as GHG emissions (scope 1 and 2) per million USD sales of the issuer. GHG emissions per million USD sales was used, as this metrics allows to differentiate between more and less energy efficient issuers. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio GHG intensity data must be available.
- Further, the Investment Manager adhered to a minimum percentage of 5.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

A reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does

this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio which is covered by GHG intensity data was 92.91%. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual GHG intensity of the Sub-Fund's portfolio was 65.13% lower than the GHG intensity of the benchmark at the relevant financial year. The calculation of the GHG intensity is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio which is covered by GHG intensity data was	92.91%	95.94%	47.22%
The actual average GHG intensity of the Sub-Fund's portfolio vs average GHG intensity of the benchmark was lower by	65.13%	70.36%	65.11%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	23.98 %
C11	Manufacture of beverages	0.31 %
C20	Manufacture of chemicals and chemical products	2.01 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.46 %
C25	Manufacture of fabricated metal products, except machinery and equipment	2.41 %
C26	Manufacture of computer, electronic and optical products	0.68 %
C27	Manufacture of electrical equipment	1.15 %
C28	Manufacture of machinery and equipment n.e.c.	1.14 %
C29	Manufacture of motor vehicles, trailers and semi-trailers	13.82 %
D	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	6.13 %

S	OTHER SERVICE ACTIVITIES	1.07 %
S96	Other personal service activities	1.07 %
Other	NOT SECTORIZED	2.33 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

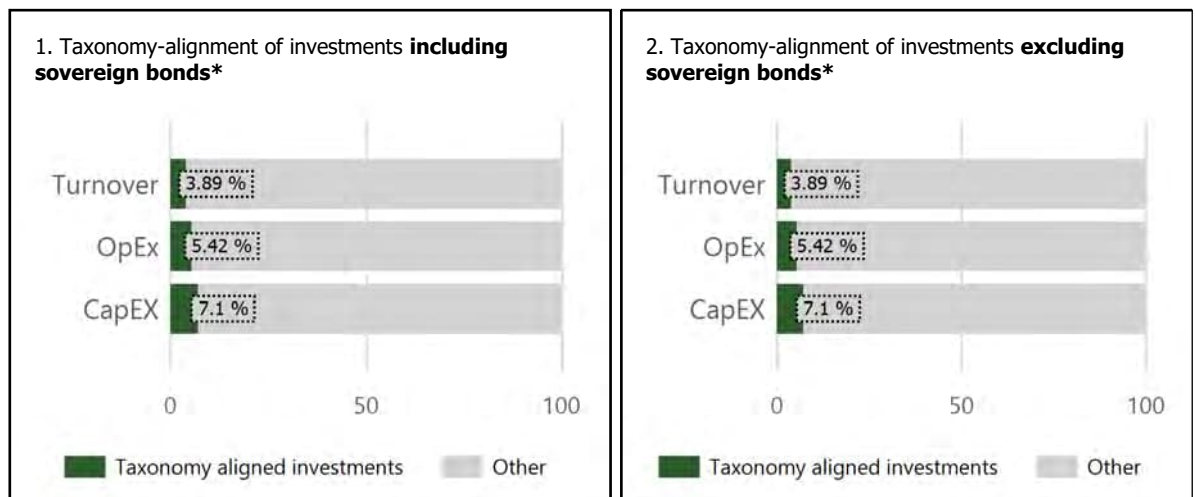

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	2.86 %
Climate change adaptation	0.14 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.02 %
Enabling activities	1.19 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	3.89 %	2.36 %	0.32 %
Capex	7.1 %	5.93 %	0 %
Opex	5.42 %	5.68 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	3.89 %	2.36 %	0.92 %
Capex	7.1 %	5.93 %	0 %
Opex	5.42 %	5.68 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 21.59% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 17.65% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Investment Manager has assigned the index "ICE BofA Euro Corporate Index" as the Sub-Fund's benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by managing the GHG intensity so that it will be continuously 20% lower than the GHG intensity of the benchmark as described in the section "What investment strategy does this financial product follow?".

- **How did the reference benchmark differ from a broad market index?**

The Sub-Fund's benchmark is a market index.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The actual GHG intensity of the Sub-Fund's portfolio was 65.13 % lower than the GHG intensity of the benchmark at the relevant financial year end. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **How did this financial product perform compared with the reference benchmark?**

Benchmark is only used in connection with the measurement of Sub-Fund's GHG intensity.

- **How did this financial product perform compared with the broad market index?**

Benchmark is only used in connection with the measurement of Sub-Fund's GHG intensity.

Reference benchmarks
are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Target Maturity Euro Bond III

Legal entity identifier: 529900YTC9IHB6RCQ908

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 46.29% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Target Maturity Euro Bond III (the "Sub-Fund") promoted environmental and social characteristics as well as the management of greenhouse gas ("GHG") intensity. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed investments (excluded cash and derivatives) according to the greenhouse gas ("GHG") emissions of investee companies as far as such data was available. Based on this, the Investment Manager managed the Sub-Fund in a way that the GHG intensity of the portfolio was 20.00% lower than the GHG intensity of the Sub-Fund's benchmark. GHG intensity was defined as GHG emissions (scope 1 and 2) per million USD sales of the issuer. GHG emissions per million USD sales was used, as this metrics allows to differentiate between more and less energy efficient issuers. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio GHG intensity data must be available.
- Further, the Investment Manager adhered to a minimum percentage of 5.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

A reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does

this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio which is covered by GHG intensity data was 96.1 %.

The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual GHG intensity of the Sub-Fund's portfolio was 51.3 % lower than the GHG intensity of the benchmark at the relevant financial year. The calculation of the GHG intensity is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024
The actual percentage of the portfolio which is covered by GHG intensity data was	96.1%	92.56%
The actual average GHG intensity of the Sub-Fund's portfolio vs average GHG intensity of the benchmark was lower by	51.3%	65.05%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year	

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	25.63 %
C10	Manufacture of food products	1.76 %

Other	NOT SECTORIZED	3.32 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

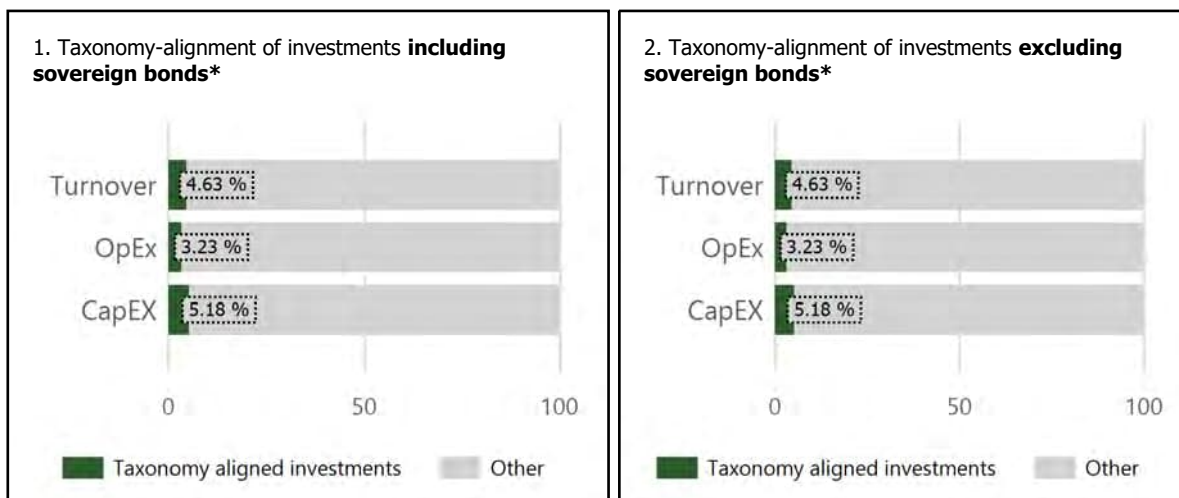

Yes

In fossil gas In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	4.59 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.39 %
Enabling activities	1.17 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024
Turnover	4.63 %	3.35 %
Capex	5.18 %	5.25 %
Opex	3.23 %	3.49 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024
Turnover	4.63 %	3.35 %
Capex	5.18 %	5.25 %
Opex	3.23 %	3.49 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 17.32% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 24.34% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Investment Manager has assigned the index "ICE BofA Euro Corporate Index" as the Sub-Fund's benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by managing the GHG intensity so that it will be continuously 20% lower than the GHG intensity of the benchmark as described in the section "What investment strategy does this financial product follow?".

Reference benchmarks

are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- [How did the reference benchmark differ from a broad market index?](#)

The Sub-Fund's benchmark is a market index.

- [How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?](#)

The actual GHG intensity of the Sub-Fund's portfolio was 51.3 % lower than the GHG intensity of the benchmark at the relevant financial year end. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- [How did this financial product perform compared with the reference benchmark?](#)

Benchmark is only used in connection with the measurement of Sub-Fund's GHG intensity.

- [How did this financial product perform compared with the broad market index?](#)

Benchmark is only used in connection with the measurement of Sub-Fund's GHG intensity.

Product name:

Allianz Target Maturity Euro Bond IV

Legal entity identifier: 529900LIFZM3ONFVC719

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 49.11% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Target Maturity Euro Bond IV (the "Sub-Fund") promoted environmental and social characteristics as well as the management of greenhouse gas ("GHG") intensity. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed investments (excluded cash and derivatives) according to the greenhouse gas ("GHG") emissions of investee companies as far as such data was available. Based on this, the Investment Manager managed the Sub-Fund in a way that the GHG intensity of the portfolio was 20.00% lower than the GHG intensity of the Sub-Fund's benchmark. GHG intensity was defined as GHG emissions (scope 1 and 2) per million USD sales of the issuer. GHG emissions per million USD sales was used, as this metrics allows to differentiate between more and less energy efficient issuers. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio GHG intensity data must be available.
- Further, the Investment Manager adhered to a minimum percentage of 5.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

A reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does

this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund 's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 10% of their revenue from thermal coal extraction,

- active within the utility sector and generating more than 20% of their revenues from coal,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio which is covered by GHG intensity data was 93.01 %. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual GHG intensity of the Sub-Fund's portfolio was 62.23 % lower than the GHG intensity of the benchmark at the relevant financial year. The calculation of the GHG intensity is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024
The actual percentage of the portfolio which is covered by GHG intensity data was	93.01%	66.15%
The actual average GHG intensity of the Sub-Fund's portfolio vs average GHG intensity of the benchmark was lower by	62.23%	57.6%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year	

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	20.69 %
C10	Manufacture of food products	3.86 %
C11	Manufacture of beverages	3.67 %
C28	Manufacture of machinery and equipment n.e.c.	1.92 %
C29	Manufacture of motor vehicles, trailers and semi-trailers	11.23 %
D	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	3.76 %
D35	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	3.76 %
G	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	1.91 %
G47	Retail trade, except of motor vehicles and motorcycles	1.91 %
H	TRANSPORTATION AND STORAGE	1.92 %
H51	Air transport	1.92 %
J	INFORMATION AND COMMUNICATION	11.76 %
J61	Telecommunications	11.76 %
K	FINANCIAL AND INSURANCE ACTIVITIES	41.73 %
K64	Financial service activities, except insurance and pension funding	37.10 %
K66	Activities auxiliary to financial services and insurance activities	4.63 %
L	REAL ESTATE ACTIVITIES	5.13 %
L68	REAL ESTATE ACTIVITIES	5.13 %
M	PROFESSIONAL, SCIENTIFIC AND TECHNICAL ACTIVITIES	1.89 %
M73	Advertising and market research	1.89 %
N	ADMINISTRATIVE AND SUPPORT SERVICE ACTIVITIES	7.87 %
N77	Rental and leasing activities	3.98 %
N79	Travel agency, tour operator and other reservation service and related activities	1.99 %
N80	Security and investigation activities	1.90 %
Q	HUMAN HEALTH AND SOCIAL WORK ACTIVITIES	1.80 %
Q86	Human health activities	1.80 %
Other	NOT SECTORIZED	1.53 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	1.47 %
Climate change adaptation	0.01 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.01 %
Enabling activities	0.61 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024
Turnover	2.13 %	0.72 %
Capex	3.5 %	1.6 %
Opex	3.19 %	1.19 %

Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024
Turnover	2.13 %	1.55 %
Capex	3.5 %	3.45 %
Opex	3.19 %	2.57 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 11.56% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 35.11% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Investment Manager has assigned the index "ICE BofA Euro Corporate Index" as the Sub-Fund's benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by managing the GHG intensity so that it will be continuously 20% lower than the GHG intensity of the benchmark as described in the section "What investment strategy does this financial product follow?".

- **How did the reference benchmark differ from a broad market index?**

The Sub-Fund's benchmark is a market index.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The actual GHG intensity of the Sub-Fund's portfolio was 62.23 % lower than the GHG intensity of the benchmark at the relevant financial year end. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **How did this financial product perform compared with the reference benchmark?**

Benchmark is only used in connection with the measurement of Sub-Fund's GHG intensity.

- **How did this financial product perform compared with the broad market index?**

Benchmark is only used in connection with the measurement of Sub-Fund's GHG intensity.

Reference benchmarks
are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Thematica

Legal entity identifier: 5493004ZRV2CSS15YF05

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 53.47% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Thematica (the "Sub-Fund") promoted a broad range of environmental and social characteristics. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by, excluded direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager adhered to a minimum percentage of 30.00% of Sustainable Investments. Sustainable Investments include a broad range of environmental and social topics, for which the Investment Manager used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the EU Taxonomy objectives. The proprietary methodology to assess the environmental and social contribution was described in the section "What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?" and contained an assessment of the positive contribution to environmental and social contributions as well as an assessment to avoid significant harm to any environmental or social objective.
- Further, the Investment Manager committed to invest minimum 65% of Sub-Fund's net asset value into issuers which, as assessed by the Investment Manager, were not considered to significantly harm any environmental or social objective according to the Sustainable Investment methodology.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does

Sustainability indicators
measure how the
environmental or social
characteristics promoted
by the financial product
are attained.

this financial product follow?" in the pre-contractual document.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 10% of their revenue from thermal coal extraction,

- active within the utility sector and generating more than 20% of their revenues from coal,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of assets invested in issuers which have been assessed according to the Sustainable Investments methodology at the end of the financial year was 92.38 %. The calculation of the Sustainable Investments methodology is described below in the sections "What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?" and "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual Sustainable Investment share at the end of the financial year was 53.47 %.

-The actual percentage of investments that pass the assessment to significantly harm environmental or social objectives at the end of the financial year was 5.82 %.

- ... and compared to previous periods?

On 28.09.2023, the sustainable investment approach was changed from the Climate Engagement with Outcome (CEWO) to another E/S Strategy (KPI Strategy - Absolute Threshold). The indicators for measuring compliance with ecological and social characteristics between the investment approaches are only partially comparable. If the indicators for the CEWO are not comparable, they are not included in the table. For information on the performance of the strategy, please refer to the 2023 year-end report (available upon request).

Indicator	09.2025	09.2024	09.2023
The actual percentage of assets invested in issuers which have been assessed according to the Sustainable Investments methodology at the end of the financial year was	92.38%	97%	95.65%
The actual weighted average sustainable investment share of Sub-Fund Assets was	53.47%	61.77%	47.56%
The actual percentage of investments that pass the assessment to not significantly harm environmental or social objectives at the end of the financial year was	5.82%	0.56%	6.01%
The response rate (companies replied to the engagement questionnaire) was*	-	-	100%
Change of the carbon footprint**	-	-	-12.7%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

* The top 10 carbon emitting issuers are determined periodically. Over the reference dates Q4/2020, Q1/2022 and Q1/2023 the 21 emitters were identified.

** Change of the CO2 emissions of the year 2019 compared to 2021

All investments in sovereign issuers were evaluated with an SRI rating until the sustainable investment approach was changed.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
BROADCOM INC	MANUFACTURING	1.07 %	USA

ABB LTD-REG	MANUFACTURING	0.90 %	Switzerland

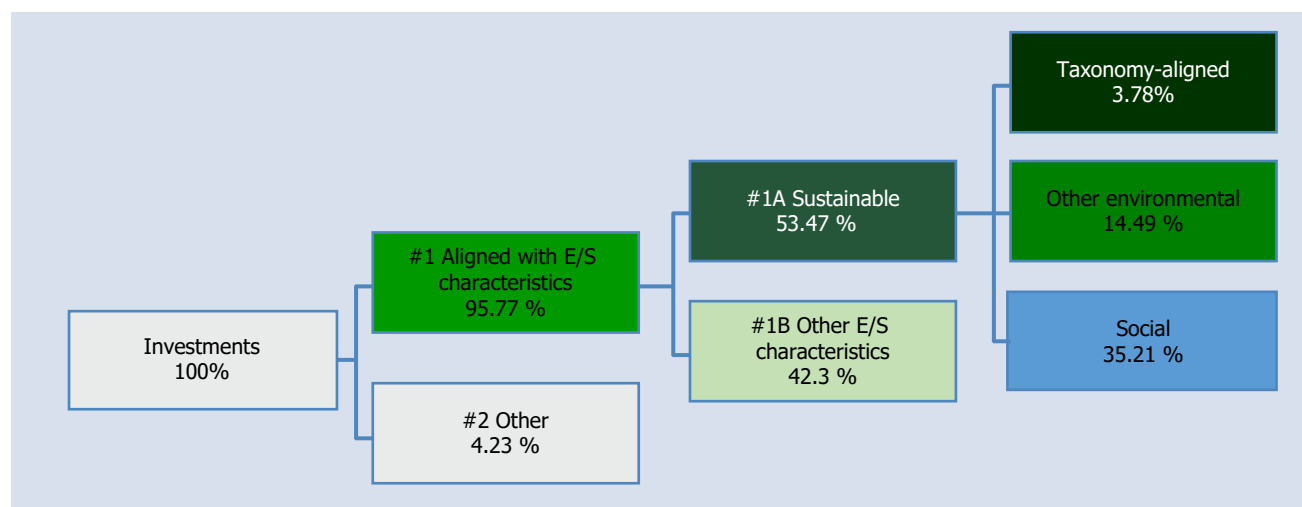

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	2.17 %
B07	Mining of metal ores	2.17 %
C	MANUFACTURING	46.96 %
C20	Manufacture of chemicals and chemical products	1.48 %
C22	Manufacture of rubber and plastic products	1.51 %
C24	Manufacture of basic metals	0.40 %
C25	Manufacture of fabricated metal products, except machinery and equipment	0.66 %
C26	Manufacture of computer, electronic and optical products	19.00 %
C27	Manufacture of electrical equipment	8.18 %
C28	Manufacture of machinery and equipment n.e.c.	8.94 %
C29	Manufacture of motor vehicles, trailers and semi-trailers	2.16 %
C30	Manufacture of other transport equipment	4.00 %

C32	Other manufacturing	0.43 %
C33	Repair and installation of machinery and equipment	0.20 %
D	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	3.70 %
D35	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	3.70 %
E	WATER SUPPLY; SEWERAGE, WASTE MANAGEMENT AND REMEDIATION ACTIVITIES	4.25 %

M71	Architectural and engineering activities; technical testing and analysis	1.70 %
N	ADMINISTRATIVE AND SUPPORT SERVICE ACTIVITIES	0.40 %
N82	Office administrative, office support and other business support activities	0.40 %
Other	NOT SECTORIZED	5.73 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	3.22 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	1.74 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	3.78 %	5.42 %	4.41 %
Capex	3.53 %	5.15 %	0 %
Opex	3.12 %	3.68 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	3.78 %	5.42 %	4.41 %
Capex	3.53 %	5.15 %	0 %
Opex	3.12 %	3.68 %	0 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 14.49% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 35.21% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager’s engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI’s strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI’s holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks
are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Product name:

Allianz Total Return Asian Equity

Legal entity identifier: 549300K61J05QBE7CP78

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 48.21% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Total Return Asian Equity (the "Sub-Fund") promoted environmental and social characteristics as well as the management of greenhouse gas ("GHG") intensity. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed investments (excluded cash and derivatives) according to the greenhouse gas ("GHG") emissions of investee companies as far as such data was available. Based on this, the Investment Manager managed the Sub-Fund in a way that the GHG intensity of the portfolio was 20.00% lower than the GHG intensity of the Sub-Fund's benchmark. GHG intensity was defined as GHG emissions (scope 1 and 2) per million USD sales of the issuer. GHG emissions per million USD sales was used, as this metrics allows to differentiate between more and less energy efficient issuers. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio GHG intensity data must be available.
- Further, the Investment Manager adhered to a minimum percentage of 2.00% of Sustainable Investments.

A reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio which is covered by GHG intensity data was 93.31%. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual GHG intensity of the Sub-Fund's portfolio was 66.55% lower than the GHG intensity of the benchmark at the relevant financial year. The calculation of the GHG intensity is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio which is covered by GHG intensity data was	93.31%	97.98%	89.3%
The actual average GHG intensity of the Sub-Fund's portfolio vs average GHG intensity of the benchmark was lower by	66.55%	70.94%	61.12%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
TAIWAN SEMICONDUCTOR MANUFAC	MANUFACTURING	9.53 %	Taiwan

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	50.15 %
C10	Manufacture of food products	1.56 %
C19	Manufacture of coke and refined petroleum products	2.37 %
C20	Manufacture of chemicals and chemical products	2.85 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	1.37 %
C24	Manufacture of basic metals	1.75 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

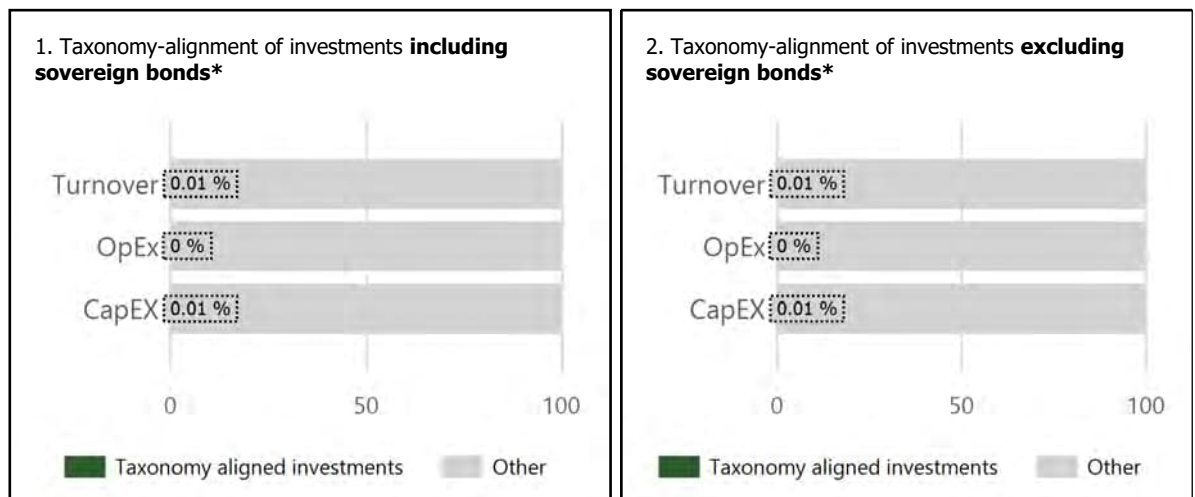

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.01 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	0.01 %	0.06 %	0 %
Capex	0.01 %	0.07 %	0 %
Opex	0 %	0 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	0.01 %	0.06 %	0 %
Capex	0.01 %	0.07 %	0 %
Opex	0 %	0 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 18.45% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 29.75% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI 's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Investment Manager has assigned the index "MSCI AC Asia Excl. Japan Total Return Net" as the Sub-Fund's benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by managing the GHG intensity so that it will be continuously 20% lower than the GHG intensity of the benchmark as described in the section "What investment strategy does this financial product follow?".

- **How did the reference benchmark differ from a broad market index?**

The Sub-Fund's benchmark is a market index.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The actual GHG intensity of the Sub-Fund's portfolio was 66.55 % lower than the GHG intensity of the benchmark at the relevant financial year end. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **How did this financial product perform compared with the reference benchmark?**

01/10/2024 - 30/09/2025	Allianz Total Return Asian Equity	Benchmark	Active Return
Performance %	17.2	17.19	0.01

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did this financial product perform compared with the broad market index?

01/10/2024 - 30/09/2025	Allianz Total Return Asian Equity	Benchmark	Active Return
Performance %	17.2	17.19	0.01

Product name:

Allianz Treasury Short Term Plus Euro

Legal entity identifier: 549300RZL4PEFWYY4H53

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: _%**

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 52.3% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective: _%**

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Treasury Short Term Plus Euro (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- Further, the Investment Manager adhered to a minimum percentage of 5.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does

this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 10% of their revenue from thermal coal extraction,

- active within the utility sector and generating more than 20% of their revenues from coal,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The actual percentage of the portfolio with a proprietary sustainability score of 1 or more was 100 % at the financial year end. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a proprietary sustainability score was	100%	99.54%	98.69%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 9.33 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	2.19 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.02 %
Enabling activities	0.91 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	2.25 %	2.79 %	2.22 %
Capex	4.14 %	5.94 %	0 %
Opex	3.25 %	5.93 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	2.48 %	3.16 %	2.6 %
Capex	4.56 %	6.73 %	0 %
Opex	3.58 %	6.72 %	0 %

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 16.66% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 33.17% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz US Investment Grade Credit

Legal entity identifier: 529900XTY5ODOFJVZ671

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 45.76% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz US Investment Grade Credit (the "Sub-Fund") promoted environmental and social characteristics as well as the management of greenhouse gas ("GHG") intensity. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed investments (excluded cash and derivatives) according to the greenhouse gas ("GHG") emissions of investee companies as far as such data was available. Based on this, the Investment Manager managed the Sub-Fund in a way that the GHG intensity of the portfolio was 20.00% lower than the GHG intensity of the Sub-Fund's benchmark. GHG intensity was defined as GHG emissions (scope 1 and 2) per million USD sales of the issuer. GHG emissions per million USD sales was used, as this metrics allows to differentiate between more and less energy efficient issuers. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio GHG intensity data must be available.
- Further, the Investment Manager adhered to a minimum percentage of 10.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

A reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does

this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 10% of their revenue from thermal coal extraction,

- active within the utility sector and generating more than 20% of their revenues from coal,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio which is covered by GHG intensity data was 89.27%. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual GHG intensity of the Sub-Fund's portfolio was 27.09% lower than the GHG intensity of the benchmark at the relevant financial year. The calculation of the GHG intensity is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024
The actual percentage of the portfolio which is covered by GHG intensity data was	89.27%	89.04%
The actual average GHG intensity of the Sub-Fund's portfolio vs average GHG intensity of the benchmark was lower by	27.09%	36.55%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year	

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 5.83 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

- [Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?](#)

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.51 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.03 %
Enabling activities	0.15 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024
Turnover	0.85 %	0.53 %
Capex	0.17 %	0.31 %
Opex	0.14 %	0.24 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024
Turnover	0.91 %	0.57 %
Capex	0.18 %	0.34 %
Opex	0.15 %	0.26 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 7.05% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 37.85% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these

investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager’s engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI’s strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI’s holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Investment Manager has assigned the index "Bloomberg US Corporate Total Return" as the Sub-Fund's benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by managing the GHG intensity so that it will be continuously 20% lower than the GHG intensity of the benchmark as described in the section "What investment strategy does this financial product follow?".

- [How did the reference benchmark differ from a broad market index?](#)

The Sub-Fund's benchmark is a market index.

- [How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?](#)

The actual GHG intensity of the Sub-Fund's portfolio was 27.09 % lower than the GHG intensity of the benchmark at the relevant financial year end. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- [How did this financial product perform compared with the reference benchmark?](#)

01/10/2024 - 30/09/2025	Allianz US Investment Grade Credit	Benchmark	Active Return

Product name:

Allianz US Large Cap Value

Legal entity identifier: 529900PCEKY03SO2GS40

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 42.05% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz US Large Cap Value (the "Sub-Fund") promoted environmental and social characteristics as well as the reduction of greenhouse gas ("GHG") intensity. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed investments (excluded cash and derivatives) according to the greenhouse gas ("GHG") emissions of investee companies as far as such data was available. Based on this, the Investment Manager managed the Sub-Fund so that the GHG intensity of the portfolio declines over time. The basis for assessing the decline was a GHG intensity target set for the respective end of the Sub-Fund's financial year. GHG intensity was defined as GHG emissions (scope 1 and 2) per million USD sales of the issuer. GHG emissions per million USD sales was used, as this metrics allows to differentiate between more and less energy efficient issuers. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio GHG intensity data must be available.
- Further, the Investment Manager adhered to a minimum percentage of 10.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does

this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio which is covered by GHG intensity data was 99.06 %. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual GHG intensity of the Sub-Fund's portfolio compared to the GHG target set under the GHG intensity pathway for the end of the relevant financial year was 4.31 %. The calculation of the GHG intensity is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024
The actual percentage of the portfolio which is covered by GHG intensity data was	99.06%	95.61%
The actual GHG intensity of the Sub-Fund's portfolio compared to the GHG target set under the GHG intensity pathway for the end of the relevant financial year was	4.31%	10.36%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year	

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
BANK OF AMERICA CORP	FINANCIAL AND INSURANCE ACTIVITIES	3.37 %	USA

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	1.82 %
B06	Extraction of crude petroleum and natural gas	1.82 %

Q86	Human health activities	3.18 %
Other	NOT SECTORIZED	0.25 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.58 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.36 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds		
	09.2025	09.2024
Turnover	0.58 %	0.26 %
Capex	0 %	0.27 %
Opex	0 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds		
	09.2025	09.2024
Turnover	0.58 %	0.26 %
Capex	0 %	0.27 %
Opex	0 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 6.45% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 35.02% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz US Short Duration High Income Bond

Legal entity identifier: 549300AGX4LFUYBR5189

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 27.76% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz US Short Duration High Income Bond (the "Sub-Fund") promoted environmental and social characteristics as well as the reduction of greenhouse gas ("GHG") intensity. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed investments (excluded cash and derivatives) according to the greenhouse gas ("GHG") emissions of investee companies as far as such data was available. Based on this, the Investment Manager managed the Sub-Fund so that the GHG intensity of the portfolio declines over time. The basis for assessing the decline was a GHG intensity target set for the respective end of the Sub-Fund's financial year. GHG intensity was defined as GHG emissions (scope 1 and 2) per million USD sales of the issuer. GHG emissions per million USD sales was used, as this metrics allows to differentiate between more and less energy efficient issuers. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio GHG intensity data must be available.
- Further, the Investment Manager adhered to a minimum percentage of 3.00% of Sustainable Investments.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund 's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio which is covered by GHG intensity data was 69.62 %. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual GHG intensity of the Sub-Fund's portfolio compared to the GHG target set under the GHG intensity pathway for the end of the relevant financial year was 31.01 %. The calculation of the GHG intensity is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **... and compared to previous periods?**

On 02.06.2023, the sustainable investment approach was changed from the Climate Engagement with Outcome (CEWO) to another E/S Strategy (KPI Strategy - Absolute). The indicators for measuring compliance with ecological and social characteristics between the investment approaches are only partially comparable. If the indicators for the CEWO are not comparable, they are not included in the table. For information on the performance of the strategy, please refer to the 2023 year-end report (available upon request).

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio which is covered by GHG intensity data was	69.62%	70.1%	70.68%
The actual GHG intensity of the Sub-Fund's portfolio compared to the GHG target set under the GHG intensity pathway for the end of the relevant financial year was	31.01%	3.85%	9.54%
The response rate (companies replied to the engagement questionnaire) was*	-	-	79%
Change of the carbon footprint**	-	-	13.4%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

* The top 10 carbon emitting issuers are determined periodically. Over the reference dates Q4/2020, Q1/2022 and Q1/2023 the 19 emitters were identified.

** Change of the CO2 emissions of the year 2019 compared to 2021

All investments in sovereign issuers were evaluated with an SRI rating until the sustainable investment approach was changed.

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	14.64 %
C19	Manufacture of coke and refined petroleum products	5.21 %
C20	Manufacture of chemicals and chemical products	1.01 %
C22	Manufacture of rubber and plastic products	2.77 %
C24	Manufacture of basic metals	0.18 %
C27	Manufacture of electrical equipment	1.87 %

C28	Manufacture of machinery and equipment n.e.c.	1.19 %
C29	Manufacture of motor vehicles, trailers and semi-trailers	2.42 %
D	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	4.86 %
D35	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	4.86 %
F	CONSTRUCTION	0.98 %

R92	Gambling and betting activities	0.79 %

R93	Sports activities and amusement and recreation activities	0.24 %
Other	NOT SECTORIZED	13.65 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?**

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.19 %
Climate change adaptation	0.00 %

- **What was the share of investments made in transitional and enabling activities?**

Transitional activities	0.00 %
Enabling activities	0.02 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	0.22 %	2.46 %	3.87 %
Capex	0 %	0 %	0 %
Opex	0 %	0 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	0.22 %	2.46 %	3.87 %
Capex	0 %	0 %	0 %
Opex	0 %	0 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 6.78% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 20.76% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Better World Defensive

Legal entity identifier: 529900ASTWITUJ82W129

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: 60.27%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of _% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: 34.34%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

Allianz Better World Defensive (the "Sub-Fund") invests in securities of companies providing products or services which contribute to environmental or social objectives, as defined by the UN Sustainable Development goals (SDGs) or the EU Taxonomy objectives, which were also related to the SDGs. The Sub-Fund did so by:

- As a first step, the Investment Manager excluded direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe mainly those issuers providing products or services suitable to facilitate positive environmental and social contributions. Environmental or social contributions include a broad range of topics, for which the Investment Manager used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the EU Taxonomy objectives. The proprietary methodology to assess the environmental and social contribution was described in the section "What were the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?" and contained an assessment of the positive contribution to environmental and social contributions as well as an assessment to avoid significant harm to any environmental or social objective.
- Further, the Investment Manager adhered to a minimum percentage of 80% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark for the purpose of attaining the sustainable investment objective of the Fund was designated.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the sustainable investment objective the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund 's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- deriving more than 10% of their revenues from (i) weapons or (ii) military equipment and military services,
- deriving more than 1% of their revenues from exploration, mining, extraction, distribution or refining of thermal coal,
- active within the utility sector and generating more than 20% of their revenues from coal,
- deriving more than 10% of their revenues from the exploration, extraction, distribution or refining of oil fuels,
- deriving more than 50% of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels,
- deriving more than 50% of their revenues from electricity generation with a GHG intensity of more than 100 g CO₂ e/kWh,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual Sustainable Investment share at the end of the financial year was 94.61 %.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual Sustainable Investment share at the end of the financial year was	94.61%	93.23%	92.56%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

investments to attain the sustainable investment objective?".

- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.

- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.

- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

-The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also

prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement. -The Investment Manager joined the Net Zero Asset Manager Initiative.[1] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[1]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Share of non-renewable energy consumption and production
- Activities negatively affecting biodiversity-sensitive areas
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Unadjusted gender pay gap
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- GHG intensity
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not contribute to meet the sustainable investment objective. Examples of such assets are derivatives, cash and deposits. As these assets were not used to meet the sustainable investment objective of the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the attainment of the sustainable investment objective within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the sustainable investment objective of this Sub-Fund. A low portion of the Sub-Fund contained assets which did not contribute to the sustainable investment objective. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

- What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector

affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
A	AGRICULTURE, FORESTRY AND FISHING	0.02 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0.07 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	7.45 %
Climate change adaptation	0.49 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.17 %
Enabling activities	3.91 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	8.68 %	7.13 %	6.94 %
Capex	11.8 %	9.28 %	0 %
Opex	8.96 %	8.45 %	0 %

Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	8.68 %	7.13 %	6.94 %
Capex	11.8 %	9.28 %	0 %
Opex	8.97 %	8.46 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 51.65% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 34.34% of Sub-Fund assets.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to attain the sustainability investment objective during the reference period?

To ensure that the Sub-Fund meets its sustainable investment objective, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager’s engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus

of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference sustainable benchmark?

No, the Investment Manager has not assigned a reference benchmark to meet the sustainable investment objective of the financial product.

Reference benchmarks are indexes to measure whether the financial product attains sustainable objective.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to meet the sustainable investment objective.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?**

The Investment Manager has not assigned a reference benchmark to meet the sustainable investment objective.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to meet the sustainable investment objective.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to meet the sustainable investment objective.

Product name:

Allianz Better World Dynamic

Legal entity identifier: 529900APHN2CJCOLZ557

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: 37.41%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of _% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: 51.33%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

Allianz Better World Dynamic (the "Sub-Fund") invests in securities of companies providing products or services which contribute to environmental or social objectives, as defined by the UN Sustainable Development goals (SDGs) or the EU Taxonomy objectives, which were also related to the SDGs. The Sub-Fund did so by:

- As a first step, the Investment Manager excluded direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe mainly those issuers providing products or services suitable to facilitate positive environmental and social contributions. Environmental or social contributions include a broad range of topics, for which the Investment Manager used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the EU Taxonomy objectives. The proprietary methodology to assess the environmental and social contribution was described in the section "What were the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?" and contained an assessment of the positive contribution to environmental and social contributions as well as an assessment to avoid significant harm to any environmental or social objective.
- Further, the Investment Manager adhered to a minimum percentage of 80% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark for the purpose of attaining the sustainable investment objective of the Fund was designated.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the sustainable investment objective the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund 's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- deriving more than 10% of their revenues from (i) weapons or (ii) military equipment and military services,
- deriving more than 1% of their revenues from exploration, mining, extraction, distribution or refining of thermal coal,
- active within the utility sector and generating more than 20% of their revenues from coal,
- deriving more than 10% of their revenues from the exploration, extraction, distribution or refining of oil fuels,
- deriving more than 50% of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels,
- deriving more than 50% of their revenues from electricity generation with a GHG intensity of more than 100 g CO₂ e/kWh,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual Sustainable Investment share at the end of the financial year was 88.74 %.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual Sustainable Investment share at the end of the financial year was	88.74%	86.08%	85.47%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

investments to attain the sustainable investment objective?".

- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.

- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.

- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

-The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also

prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement. -The Investment Manager joined the Net Zero Asset Manager Initiative.[1] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[1]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Share of non-renewable energy consumption and production
- Activities negatively affecting biodiversity-sensitive areas
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Unadjusted gender pay gap
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- GHG intensity
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not contribute to meet the sustainable investment objective. Examples of such assets are derivatives, cash and deposits. As these assets were not used to meet the sustainable investment objective of the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

Largest investment	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the attainment of the sustainable investment objective within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the sustainable investment objective of this Sub-Fund. A low portion of the Sub-Fund contained assets which did not contribute to the sustainable investment objective. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

- What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered

aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
A	AGRICULTURE, FORESTRY AND FISHING	0.05 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0.02 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

Taxonomy-aligned activities are expressed as a share of:

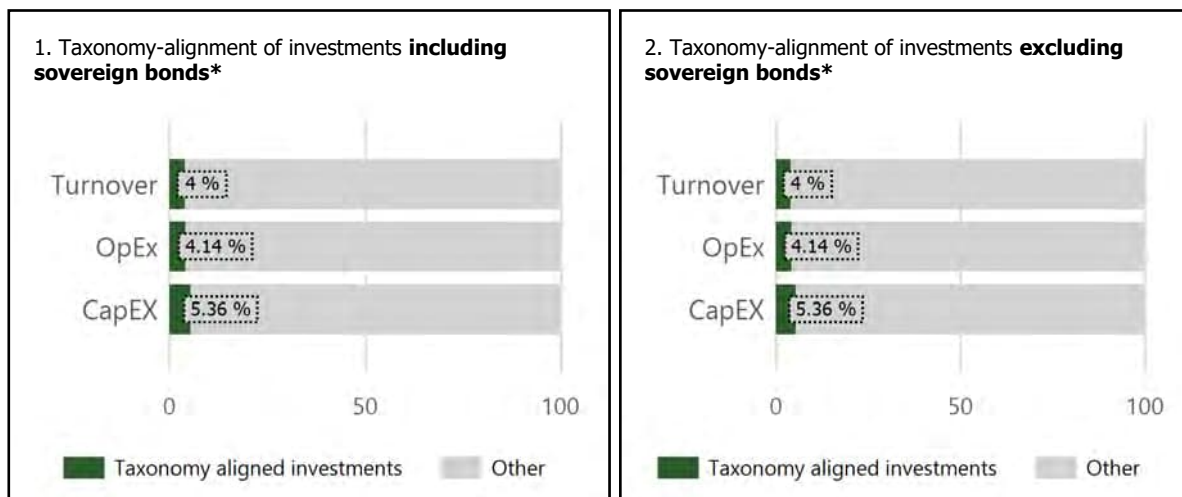

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

In fossil gas In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	3.49 %
Climate change adaptation	0.14 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.25 %
Enabling activities	1.51 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	4 %	3.68 %	7.23 %
Capex	5.36 %	3.98 %	0 %
Opex	4.14 %	3.61 %	0 %

Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	4 %	3.68 %	7.23 %
Capex	5.36 %	3.98 %	0 %
Opex	4.14 %	3.61 %	0 %

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 33.35% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 51.33% of Sub-Fund assets.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to attain the sustainability investment objective during the reference period?

To ensure that the Sub-Fund meets its sustainable investment objective, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager’s engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI’s strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI’s holdings and considering the priorities of clients.

How did this financial product perform compared to the reference sustainable benchmark?

No, the Investment Manager has not assigned a reference benchmark to meet the sustainable investment objective of the financial product.

- [How did the reference benchmark differ from a broad market index?](#)

The Investment Manager has not assigned a reference benchmark to meet the sustainable investment objective.

- [How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?](#)

Reference benchmarks are indexes to measure whether the financial product attains sustainable objective.

Product name:

Allianz Better World Moderate

Legal entity identifier: 529900R8CZVBS2IWI189

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: 48.95%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of _% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: 42.77%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

Allianz Better World Moderate (the "Sub-Fund") invests in securities of companies providing products or services which contribute to environmental or social objectives, as defined by the UN Sustainable Development goals (SDGs) or the EU Taxonomy objectives, which were also related to the SDGs. The Sub-Fund did so by:

- As a first step, the Investment Manager excluded direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe mainly those issuers providing products or services suitable to facilitate positive environmental and social contributions. Environmental or social contributions include a broad range of topics, for which the Investment Manager used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the EU Taxonomy objectives. The proprietary methodology to assess the environmental and social contribution was described in the section "What were the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?" and contained an assessment of the positive contribution to environmental and social contributions as well as an assessment to avoid significant harm to any environmental or social objective.
- Further, the Investment Manager adhered to a minimum percentage of 80% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark for the purpose of attaining the sustainable investment objective of the Fund was designated.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the sustainable investment objective the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund 's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- deriving more than 10% of their revenues from (i) weapons or (ii) military equipment and military services,
- deriving more than 1% of their revenues from exploration, mining, extraction, distribution or refining of thermal coal,
- active within the utility sector and generating more than 20% of their revenues from coal,
- deriving more than 10% of their revenues from the exploration, extraction, distribution or refining of oil fuels,
- deriving more than 50% of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels,
- deriving more than 50% of their revenues from electricity generation with a GHG intensity of more than 100 g CO₂ e/kWh,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual Sustainable Investment share at the end of the financial year was 91.72 %.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual Sustainable Investment share at the end of the financial year was	91.72%	89.51%	88.51%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

investments to attain the sustainable investment objective?".

- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.

- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.

- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

-The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also

prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement. -The Investment Manager joined the Net Zero Asset Manager Initiative.[1] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[1]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Share of non-renewable energy consumption and production
- Activities negatively affecting biodiversity-sensitive areas
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Unadjusted gender pay gap
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- GHG intensity
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not contribute to meet the sustainable investment objective. Examples of such assets are derivatives, cash and deposits. As these assets were not used to meet the sustainable investment objective of the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the attainment of the sustainable investment objective within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the sustainable investment objective of this Sub-Fund. A low portion of the Sub-Fund contained assets which did not contribute to the sustainable investment objective. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation
describes the share of investments in specific assets.

- What was the asset allocation?

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration,

mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
A	AGRICULTURE, FORESTRY AND FISHING	0.04 %
A01	Crop and animal production, hunting and related service activities	0.04 %
B	MINING AND QUARRYING	0.04 %

Other	NOT SECTORIZED	0.27 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0.01 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

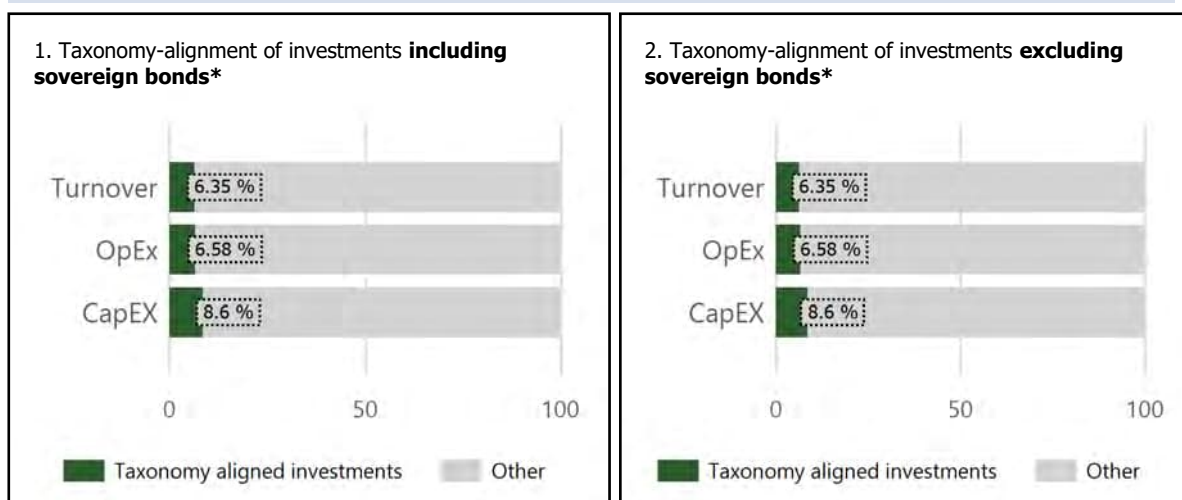

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

- Yes
- In fossil gas In nuclear energy
- No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	5.42 %
Climate change adaptation	0.40 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.20 %
Enabling activities	2.69 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	6.35 %	5.58 %	7.19 %
Capex	8.6 %	6.73 %	0 %
Opex	6.58 %	6.15 %	0 %

Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	6.35 %	5.58 %	7.19 %
Capex	8.6 %	6.73 %	0 %
Opex	6.58 %	6.15 %	0 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 42.61% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 42.77% of Sub-Fund assets.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to attain the sustainability investment objective during the reference period?

To ensure that the Sub-Fund meets its sustainable investment objective, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager’s engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI’s strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI’s holdings and considering the priorities of clients.

How did this financial product perform compared to the reference sustainable benchmark?

No, the Investment Manager has not assigned a reference benchmark to meet the sustainable investment objective of the financial product.

- [How did the reference benchmark differ from a broad market index?](#)

The Investment Manager has not assigned a reference benchmark to meet the sustainable

Reference benchmarks are indexes to measure whether the financial product attains sustainable objective.

investment objective.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?**

The Investment Manager has not assigned a reference benchmark to meet the sustainable investment objective.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to meet the sustainable investment objective.

Product name:

Allianz Green Bond

Legal entity identifier: 549300JPE1XADGY8YM71

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: 95.55%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of _% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: 0%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

Allianz Green Bond (the "Sub-Fund") had Climate Change Mitigation and Climate Change Adaptation as sustainable investment objective. The Sub-Fund did so by:

- As a first step, the Investment Manager excluded direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected Green Bonds from the remaining investment universe. Green Bonds were instruments dedicated to finance Climate Change Mitigation, Climate Change Adaptation or other environmental sustainability projects, notably in the following fields: energy efficiency, renewable energy, raw materials, water and land, waste management, greenhouse gas emissions reduction, biodiversity preservation or circular economy.
- In addition, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects.
- Further, the Investment Manager adhered to a minimum percentage of 80% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark for the purpose of attaining the sustainable investment objective of the Fund was designated.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the sustainable investment objective the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund’s financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- developing, producing, using, maintaining, offering for sale, distributing, storing or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- deriving more than 10% of their revenues from (i) weapons or (ii) military equipment and military services,
- deriving more than 1% of their revenues from exploration, mining, extraction, distribution or refining of thermal coal,
- deriving more than 10% of their revenues from the exploration, extraction, distribution or refining of oil fuels,
- deriving more than 50% of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels
- deriving more than 50% of their revenues from electricity generation with a GHG intensity of more than 100 g CO2 e/kWh,
- active within the utility sector that generate more than 30% of their revenues from coal.
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the Sub-Fund's assets invested in Green Bonds at the end of the financial year was 99.29 %. Details of the selection process of the instruments are described within the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The Investment Manager of the Sub-Fund adhered to a proprietary score of 1 or more for Green Bonds. The scoring process is described within the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the Sub-Fund's assets invested in Green Bonds at the end of the financial year was	99.29%	98.69%	92.14%
Confirmation that the proprietary score of 1 or more for Green bonds has been adhered to throughout the financial year	The Investment Manager of the Sub-Fund adhered to a proprietary score of 1 or more for Green Bonds. The scoring process is described within the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.		
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse

impacts ("PAI") on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of

the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[1] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[1]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Share of non-renewable energy consumption and production
- Activities negatively affecting biodiversity-sensitive areas
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Unadjusted gender pay gap
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- GHG intensity
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not contribute to meet the sustainable investment objective. Examples of such assets are derivatives, cash and deposits. As these assets were not used to meet the sustainable investment objective of the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the attainment of the sustainable investment objective within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the sustainable investment objective of this Sub-Fund. A low portion of the Sub-Fund contained assets which did not contribute to the sustainable investment objective. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation
describes the share of investments in specific assets.

- What was the asset allocation?

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 18.94 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	7.95 %
Climate change adaptation	0.32 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.14 %
Enabling activities	4.78 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	9.2 %	13.56 %	10.32 %
Capex	14.19 %	20.25 %	0 %
Opex	11.57 %	16.78 %	0 %

Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	11.35 %	16.98 %	13.06 %
Capex	17.51 %	25.34 %	0 %
Opex	14.28 %	21.01 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 86.35% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 0% of Sub-Fund assets.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to attain the sustainability investment objective during the reference period?

To ensure that the Sub-Fund meets its sustainable investment objective, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager’s engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus

of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference sustainable benchmark?

No, the Investment Manager has not assigned a reference benchmark to meet the sustainable investment objective of the financial product.

Reference benchmarks are indexes to measure whether the financial product attains sustainable objective.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to meet the sustainable investment objective.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?**

The Investment Manager has not assigned a reference benchmark to meet the sustainable investment objective.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to meet the sustainable investment objective.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to meet the sustainable investment objective.

Product name:

Allianz SDG Euro Credit

Legal entity identifier: 529900IA5IQGQKTAYO36

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: 78.59%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of _% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: 17.67%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

Allianz SDG Euro Credit (the "Sub-Fund") invests in securities of companies providing products or services which contribute to environmental or social objectives, as defined by the UN Sustainable Development goals (SDGs) or the EU Taxonomy objectives, which were also related to the SDGs. The Sub-Fund did so by:

- As a first step, the Investment Manager excluded direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe mainly those issuers providing products or services suitable to facilitate positive environmental and social contributions. Environmental or social contributions include a broad range of topics, for which the Investment Manager used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the EU Taxonomy objectives. The proprietary methodology to assess the environmental and social contribution was described in the section "What were the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?" and contained an assessment of the positive contribution to environmental and social contributions as well as an assessment to avoid significant harm to any environmental or social objective.
- Further, the Investment Manager adhered to a minimum percentage of 80% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark for the purpose of attaining the sustainable investment objective of the Fund was designated.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the sustainable objectives of this financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the sustainable investment objective the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund 's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- deriving more than 10% of their revenues from (i) weapons or (ii) military equipment and military services,
- deriving more than 1% of their revenues from exploration, mining, extraction, distribution or refining of thermal coal,
- active within the utility sector and generating more than 20% of their revenues from coal,
- deriving more than 50% of their revenues from electricity generation with a GHG intensity of more than 100 g CO₂ e/kWh,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco, or deriving more than 15% of their revenues from the involvement in tobacco-related services,
- involved in the production of (i) arctic oil drilling or (ii) other non-conventional oil and gas,
- deriving more than 10% of their revenues from the exploration, extraction, distribution or refining of oil fuels,
- deriving more than 50% of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels,
- involved in gambling,
- deriving more than 10% of their revenues from high-proof alcohol.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual Sustainable Investment share at the end of the financial year was 96.26 %.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual Sustainable Investment share at the end of the financial year was	96.26%	94.51%	88.80%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact,

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?".

- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.

- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.

- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[1] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[1]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Share of non-renewable energy consumption and production
- Activities negatively affecting biodiversity-sensitive areas
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Unadjusted gender pay gap
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- GHG intensity
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not contribute to meet the sustainable investment objective. Examples of such assets are derivatives, cash and deposits. As these assets were not used to meet the sustainable investment objective of the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

Largest investment	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the attainment of the sustainable investment objective within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the sustainable investment objective of this Sub-Fund. A low portion of the Sub-Fund contained assets which did not contribute to the sustainable investment objective. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	14.70 %
C10	Manufacture of food products	2.08 %
C20	Manufacture of chemicals and chemical products	2.20 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0.02 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	11.26 %
Climate change adaptation	0.30 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.16 %
Enabling activities	5.67 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	12.73 %	11.62 %	6.78 %
Capex	18.45 %	16.78 %	0 %
Opex	13.34 %	15.13 %	0 %

Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	12.73 %	11.62 %	6.91 %
Capex	18.45 %	16.79 %	0 %
Opex	13.35 %	15.14 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 65.96% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 17.67% of Sub-Fund assets.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to attain the sustainability investment objective during the reference period?

To ensure that the Sub-Fund meets its sustainable investment objective, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager’s engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus

of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference sustainable benchmark?

No, the Investment Manager has not assigned a reference benchmark to meet the sustainable investment objective of the financial product.

Reference benchmarks are indexes to measure whether the financial product attains sustainable objective.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to meet the sustainable investment objective.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?**

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to meet the sustainable investment objective.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to meet the sustainable investment objective.

Product name:

Allianz SDG Global Equity

Legal entity identifier: 529900TZLZ3XIEIHC86

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: 22.61%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of _% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: 62.59%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent was the sustainable investment objective of this financial product met?

Allianz SDG Global Equity (the "Sub-Fund") invests in securities of companies providing products or services which contribute to environmental or social objectives, as defined by the UN Sustainable Development goals (SDGs) or the EU Taxonomy objectives, which were also related to the SDGs. The Sub-Fund did so by:

- As a first step, the Investment Manager excluded direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe mainly those issuers providing products or services suitable to facilitate positive environmental and social contributions. Environmental or social contributions include a broad range of topics, for which the Investment Manager used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the EU Taxonomy objectives. The proprietary methodology to assess the environmental and social contribution was described in the section "What were the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?" and contained an assessment of the positive contribution to environmental and social contributions as well as an assessment to avoid significant harm to any environmental or social objective.
- In addition, the Investment Manager assessed investments (excluded cash and derivatives) according to the greenhouse gas ("GHG") emissions of investee companies as far as such data was available. Based on this, the Investment Manager managed the Sub-Fund so that the GHG intensity of the portfolio was lower than the GHG intensity of the Sub-Fund's benchmark.
- Further, the Investment Manager adhered to a minimum percentage of 80% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU

Taxonomy.

No reference benchmark for the purpose of attaining the sustainable investment objective of the Fund was designated.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the sustainable investment objective the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund 's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, submunitions, chemical weapons, biological weapons, depleted or any other industrial uranium weapons, white phosphorus weapons, and nuclear weapons), and/or deriving more than 5% of their revenues from the production of (i) (other) weapons or (ii) military equipment, and services and/or which are involved in the distribution/sales of military equipment and services and/or which provide services in relation to military equipment and services,
- deriving more than 1% of their revenues from exploration, mining, extraction, distribution or refining of thermal coal,
- generating more than 5% of their revenue from conventional oil and gas or non-conventional oil and gas-related activities such as exploration, mining, extraction, transportation, distribution, or refinement, or providing dedicated equipment or services. This includes, but is not limited to, the extraction of tar/oil sands, coalbed methane, extra heavy oil, shale oil, shale gas and ultra deep drilling. The aforesaid exclusion criteria are not applicable for those issuers which have a Science Based Targets initiative (SBTi) target set at well-below 2°C or 1.5°C, or have a SBTi Business Ambition for 1.5°C commitment, except for issuers deriving more than 10% of their revenues from the exploration, extraction, distribution or refining of oil fuels or deriving more than 50% of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels or involved in the production and/or exploration of oil sands of more than 5% of their revenues,
- active within the utility sector and generating more than 20% of their revenues from coal,
- deriving more than 5% of their revenues from coal-based energy generation. The aforesaid exclusion criterium is not applicable for those issuers which have a Science Based Targets initiative (SBTi) target set at well below 2°C or 1.5°C, or have a SBTi Business Ambition for 1.5°C commitment,
- deriving 50% or more of their revenues from electricity generation with a GHG intensity of more than 100 g CO₂ e/kWh,
- involved in the production of tobacco or e-cigarettes, or deriving more than 5% of their revenues from the distribution of tobacco or e-cigarettes,
- involved in the production of hydraulic fracturing and/or which provide services in relation to hydraulic fracturing of more than 5% of their revenues,
- involved in the production of alcohol (limited to spirits) of more than 10% of their revenues,
- involved in the production of agricultural genetically modified organisms -GMOs- of more than 5% of their revenues,
- involved in the production of nuclear power and/or which provide services in relation to nuclear power of more than 10% of their revenues,
- involved in nuclear-, gas- or coal-based energy generation related products or services unless they derive more than 50% of their revenues from contributing activities (economic activities included in the EU taxonomy). The aforesaid exclusion criterium is not applicable for those issuers which have a Science Based Targets initiative (SBTi) target set at well- below 2°C or 1.5°C or have a SBTi Business Ambition for 1.5°C commitment,
- involved in the production of arctic drilling,
- involved in the production of gambling and/or which are involved in the distribution/sales of gambling and/or which provide services in relation to gambling of more than 5% of their revenues,
- involved in the production of pornography of more than 5% of their revenues and/or which

are involved in the distribution/sales of pornography of more than 5% of their revenues,
- involved in exploration or be involved in exploitation or development of new oil or gas fields or the exploitation or development of new coal mines building new coal-fired power stations or absolute production of or capacity for coal-based power exceeds 5 GW. The non-expansion criteria can temporarily be ignored in case of national legal obligations in the context of energy provision security,
- with more than 25% of their revenues derived from products/services dedicated to the execution of harmful activities (companies which are involved in activities covered by the a.m. Sub-Fund's specific exclusion criteria are executing "Harmful Activities"). Products/services aimed at mitigating or reducing negative effects of Harmful Activities should not be included in this consideration.

The aforementioned exclusion criteria did not apply to companies active within the sector of power generation (except for companies active in the utility sector that generate more than 20% of their revenues from coal) which are not yet aligned with the criteria according to the preceding section subject to the following requirements:

- The total portfolio exposure to such non-compliant companies within the sector of power generation is until 31 December 2024 max. 3,00% of the net asset value of the Sub-Fund. This percentage will decrease to max. 2,00% until 30 June 2025 and to 0% from 1 July 2025 onwards.
 - Non-compliant companies are subject to an environmental, social and governance rating (described below in this section), whereby only the 25% highest rated companies remain investible.
 - Non-compliant companies still have to meet the governance criteria as mentioned above.
- The Sub-Fund refrains from investing directly in securities of sovereign issuers of countries:
- that on average of all 6 Worldwide Governance Indicators (WGI)[2], established by the World Bank, scores lower than -0.59 or,
 - does score less than -1.00 on a single WGI.

The Sub-Fund also refrained from investing directly in securities of sovereign issuers of high-income countries as defined by the World Bank,

- that have not ratified or implemented the eight fundamental conventions identified in the International Labour Organisation's declaration of the Fundamental Rights[4] and Principles at work,
- that have not ratified or implemented at least half of the 18 core International Human Rights Treaties[5] national legislation or equivalent,
- which are not party to the Paris Agreement[6], the UN Convention on Biological Diversity[7], or the Nuclear Non-Proliferation Treaty[8],
- with particularly high military budget exceeding 4% of the respective country's Gross Domestic Product (GDP),
- which are considered as the jurisdictions with strategic deficiencies in their regimes to counter money laundering and combating the financing of terrorism and proliferation by the Financial Action Task Force (FATF)[9],
- scoring below 40/100 on the Transparency International Corruption Perception Index[10], or
- qualified with a score as "not free" by the Freedom House Index[11],
- in which the death penalty is legal and in use. Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.
- The actual Sustainable Investment share at the end of the financial year was 85.2 %.
- The actual GHG intensity of the Sub-Fund's portfolio was 37.08 % lower than the GHG intensity of the benchmark at the relevant financial year. The calculation of the GHG intensity is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- [... and compared to previous periods?](#)

On 19.09.2025, the sustainable investment approach was changed from the SDG Aligned Type A to the SDG Aligned Type B. The indicators for measuring compliance with ecological and social characteristics between the investment approaches are only partially comparable. If the indicators for the SDG Aligned Type A are not comparable, they are not included in the table. For information on the performance of the strategy, please refer to the 2025 year-end report (available upon request).

Indicator	09.2025	09.2024	09.2023
The actual Sustainable Investment share at the end of the financial year was	85.20%	82.01%	71.96%
The actual average GHG intensity of the Sub-Fund's portfolio vs average GHG intensity of the benchmark was lower by	37.08%	-	-
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[1] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[1]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Share of non-renewable energy consumption and production
- Activities negatively affecting biodiversity-sensitive areas
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Unadjusted gender pay gap
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- GHG intensity
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not contribute to meet the sustainable investment objective. Examples of such assets are derivatives, cash and deposits. As these assets were not used to meet the sustainable investment objective of the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
NVIDIA CORP	MANUFACTURING	5.48 %	USA
MICROSOFT CORP	INFORMATION AND COMMUNICATION	5.36 %	USA
APPLE INC	MANUFACTURING	4.35 %	USA
AMAZON.COM INC	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	2.50 %	USA

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the attainment of the sustainable investment objective within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the sustainable investment objective of this Sub-Fund. A low portion of the Sub-Fund contained assets which did not contribute to the sustainable investment objective. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation
describes the share of
investments in specific
assets.

- What was the asset allocation?

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
A	AGRICULTURE, FORESTRY AND FISHING	0.07 %
A01	Crop and animal production, hunting and related service activities	0.07 %
B	MINING AND QUARRYING	0.07 %
B07	Mining of metal ores	0.07 %
C	MANUFACTURING	41.29 %
C10	Manufacture of food products	1.40 %
C11	Manufacture of beverages	0.49 %
C16	Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials	0.20 %
C20	Manufacture of chemicals and chemical products	1.85 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	6.19 %
C22	Manufacture of rubber and plastic products	0.17 %
C23	Manufacture of other non-metallic mineral products	0.08 %
C24	Manufacture of basic metals	2.44 %
C25	Manufacture of fabricated metal products, except machinery and equipment	0.28 %
C26	Manufacture of computer, electronic and optical products	17.73 %
C27	Manufacture of electrical equipment	1.37 %
C28	Manufacture of machinery and equipment n.e.c.	6.26 %

Q88	Social work activities without accommodation	0.16 %
S	OTHER SERVICE ACTIVITIES	0.37 %
S95	Repair of computers and personal and household goods	0.37 %
Other	NOT SECTORIZED	0.96 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	1.15 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.30 %
Enabling activities	0.22 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	1.22 %	2.34 %	8.78 %
Capex	1.26 %	1.91 %	0 %
Opex	1.14 %	1.61 %	0 %

Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	1.22 %	2.34 %	8.78 %
Capex	1.26 %	1.91 %	0 %
Opex	1.14 %	1.61 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 21.27% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 62.59% of Sub-Fund assets.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to attain the sustainability investment objective during the reference period?

To ensure that the Sub-Fund meets its sustainable investment objective, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, the Sustainable Minimum Exclusion list was updated at least twice per year by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager’s engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus

of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference sustainable benchmark?

No, the Investment Manager has not assigned a reference benchmark to meet the sustainable investment objective of the financial product.

Reference benchmarks are indexes to measure whether the financial product attains sustainable objective.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to meet the sustainable investment objective.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?**

The Investment Manager has not assigned a reference benchmark to meet the sustainable investment objective.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to meet the sustainable investment objective.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to meet the sustainable investment objective.

Note for investors in the Federal Republic of Germany (Unaudited)

All payments to shareholders (redemption proceeds, any dividends and other payments) can be made through the German Paying Agent listed in the "Directory". Applications for redemption and conversion may be submitted through the German Paying Agent.

With respect to sales in the Federal Republic of Germany, the Subscription, the Redemption and, if applicable, Conversion prices are published on the website <https://de.allianzgi.com>. Any announcements to investors are published on the website <https://de.allianzgi.com>. For selected share classes (e.g. share classes exclusively for institutional investors or share classes whose bases of taxation are not published in the Federal Republic of Germany) publication can be performed on one of the websites <https://regulatory.allianzgi.com> or <https://lu.allianzgi.com>.

In addition, in accordance with § 298 paragraph 2 of the German Capital Investment Code a durable medium within the meaning of § 167 of the German Capital Investment Code is used to inform investors in the Federal Republic of Germany in the following cases:

- Suspension of the redemption of Shares in a Subfund,
- Termination of the management of the Company/a Subfund or liquidation of the Company/a Subfund,
- Amendments to the terms and conditions that are not reconcilable with previous investment principles, affect material investor rights, or concern fees or expense reimbursements payable from a Subfund, including background information on the amendments and the rights of investors,
- In the case of a merger of a Subfund with another fund, the merger information in accordance with Article 43 of Directive 2009/65/EC, In the case of conversion of a Subfund into a feeder fund or, if applicable, changes to a master fund, the information to be prepared in accordance with Article 64 of Directive 2009/65/EC.

The prospectus, key investor information, Articles of Incorporation, current annual and semi-annual reports, subscription, redemption and, if applicable, conversion prices, and the additional documentation listed under "Available Documentation" may be obtained in hard copy without charge from the Information Agent listed in the "Directory" and on the website <https://de.allianzgi.com>. For selected Share Classes (e.g. Share Classes intended exclusively for institutional investors or Share Classes for which no bases of taxation are published in the Federal Republic of Germany), the information may be published on one of the following websites: <https://regulatory.allianzgi.com> or <https://lu.allianzgi.com>. The depositary agreement is available for inspection without charge at the offices of the Information Agent.

Neither the Management Company, the Depositary, the Registrar and Transfer Agent, the Distributor nor the Paying and Information Agents are liable for errors or omissions in the published prices.

Fund, Allianz US High Yield, Allianz US Investment Grade Credit, Allianz US Short Duration High Income Bond in the Republic of Austria has been registered with the Finanzmarktaufsicht (Vienna) pursuant to section 140 InvFG.

It is recommended to the investors to check before the acquisition of shares of the Sub-Funds if for the respective share class the required fiscal data are published via Oesterreichische Kontrollbank AG.

Note for Investors in the United Kingdom (Unaudited)

In relation to all Funds, the Unit Trust has received the necessary authorisations that the Shares may be offered for sale in the United Kingdom.

UK Distributor and Facilities Agent

The name and address of the UK Distributor and Facilities Agent is listed in the Directory.

All payments to Unitholders (proceeds of redemption, any distributions and other payments) can be made through the UK Distributor and Facilities Agent.

In addition to the procedures set out in the "Administration of the Trust" section of the Prospectus, any person wishing to purchase Units or any Unitholders wishing to have all or any of their Units redeemed or converted may also apply in writing to the UK Distributor and Facilities Agent and should include the duly completed application or redemption or conversion request form as appropriate or such other written notification specified by the UK Distributor and Facilities Agent.

Furthermore, the Subscription and Redemption Prices can be obtained from the UK Distributor and Facilities Agent and shall be published on a website address specified in the Prospectus. Any person who has a complaint to make about the operation of the scheme can submit the complaint to the UK Distributor and Facilities Agent.

Any complaints may be sent to The Complaints Officer at the address of the UK Distributor and Facilities Agent. A copy of the complaints process leaflet of the UK Distributor and Facilities Agent is available on request. Eligible complainants may also refer their complaint to the Financial Ombudsman Service if they are not satisfied with the final response from the UK Distributor and Facilities Agent.

UK Reporting Status Units

The Unit Trust currently intends to apply in respect of each accounting period for certification of certain Classes of Units in the Funds as reporting Classes of Units for UK tax purposes ("UK Reporting Status"). However, no guarantee can be given that such certification will be obtained.

The UK Retail Distribution Review (RDR)

Intermediaries that are regulated by the UK's Financial Conduct Authority (FCA) or are a UK branch of a regulated entity in a member state of the EEA are from 31 December 2012 subject to the FCA's RDR rules in relation to investment advice that they provide to retail clients.

In accordance with the RDR rules, any intermediary distributing funds who (i) is subject to these rules and (ii) who provides personal recommendations or advice to retail clients located in the UK, shall not be entitled to receive any commission from the fund provider in respect of any investment made after 31 December 2012 on behalf of, or related services provided to, such retail clients.

Any potential investor who is subject to the RDR rules and who provides personal recommendations or advice to retail clients located in the UK is therefore obliged to ensure that it only invests in appropriate unit classes on behalf of its clients.

The above summary does not purport to be a comprehensive description of all the considerations that may be relevant to an investor with regard to RDR. Potential investors are strongly recommended to contact their own legal advisers in this respect.

Available Documentation

The Prospectus, the Key Investor Information Document, the Trust Deed, the annual and semi-annual reports as well as the material contracts referred to in this Prospectus, together with the UCITS Regulations and the Central Bank Regulations, can be inspected, free of charge, at or obtained from the UK Distributor and Facilities Agent.

Note for investors in Switzerland (Unaudited)

1. Representative and Paying Agent in Switzerland

BNP PARIBAS, Paris, Zurich Branch, Selnaustrasse 16, CH-8002 Zurich, is Representative and Paying Agent in Switzerland for the shares distributed in Switzerland.

2. Place where the Relevant Documents may be obtained

The Prospectus, the Articles of Incorporation, the Key Investor Information as well as the Annual and Semi-Annual reports as well as the details of the changes in portfolio composition during the period under review may be obtained without charge from the Representative in Switzerland.

3. Publications

Publications in Switzerland are made on www.fundinfo.com. In Switzerland, Subscription and Redemption Prices together and/or the Net Asset Value (with the indication "commissions excluded") of the Shares are published daily on www.fundinfo.com.

4. Payment of retrocessions and rebates

Retrocessions:

The Management Company and its agents may pay retrocessions as remuneration for distribution activity in respect of shares in or from Switzerland. This remuneration may be deemed payment for the following services in particular:

- setting up processes for subscribing, holding and safe custody of the shares;
- keeping a supply of marketing and legal documents, and issuing the said documents;
- forwarding or providing access to legally required publications and other publications;
- performing due diligence delegated by the Management Company in areas such as money laundering, ascertaining client needs and distribution restrictions;
- mandating an authorised auditor to check compliance with certain duties of the Distributor, in particular with the Guidelines on the Distribution of Collective Investment

Schemes issued by the Asset Management Association Switzerland (AMAS);

- operating and maintaining an electronic distribution and/or information platform;
- clarifying and answering specific questions from investors pertaining to the investment product or the Management Company or the Sub-Investment Manager;
- drawing up fund research material;
- central relationship management;
- subscribing for shares as a "nominee" for several clients as mandated by the Management Company;
- training client advisors in collective investment schemes;
- mandating and monitoring additional distributors.

Retrocessions are not deemed to be rebates even if they are ultimately passed on, in full or in part, to the investors.

The recipients of the retrocessions must ensure transparent disclosure and inform the investor, unsolicited and free of charge, about the amount of remuneration they may receive for distribution.

On request, the recipients of retrocessions must disclose the amounts they actually receive for distributing the collective investment schemes of the investors concerned.

Rebates:

In the case of distribution activity in or from Switzerland, the Management Company and its agents may, upon request, pay rebates directly to investors. The purpose of rebates is to reduce the fees or costs incurred by the investor in question.

Rebates are permitted provided that:

- they are paid from fees received by the Management Company and therefore do not represent an additional charge on the fund assets;
- they are granted on the basis of objective criteria;
- all investors who meet the objective criteria and demand rebates are also granted these within the same timeframe and to the same extent.

The objective criteria for the granting of rebates by the Management Company are:

- the volume subscribed by the investor or the total volume they hold in the collective investment scheme or, where applicable, in the product range of the promoter;
- the amount of the fees generated by the investor;
- the investment behaviour shown by the investor (e.g. expected investment period);
- the investor's willingness to provide support in the launch phase of a collective investment scheme.

At the request of the investor, the Management Company must disclose the amounts of such rebates free of charge.

5. Place of Performance and Jurisdiction

Both the place of performance and the place of jurisdiction for Shares in the Company's Sub-Funds offered or distributed or from Switzerland shall be the seat of the Swiss representative.
