Notes to the Financial Statements

Accounting Policies

Basis of Accounting

The financial statements are prepared in accordance with the Luxembourg regulations relating to Undertakings for Collective Investment under the going concern basis of accounting, with the exception of the Subfunds Allianz Global Multi Asset Balanced, Allianz Social Conviction Equity and Allianz Systematic Enhanced US Equity for which a decision has been taken to liquidate the Subfunds. Hence the financial statements for these Subfunds have been prepared on

a liquidation basis. The application of the non going concern basis of accounting have not led to a material adjustments of the Subfunds published net asset value as of 30 September 2025.

The Subfund Allianz Emerging Europe Equity has been put into liquidation on 13 May 2024 and has also been prepared on a non-going concern basis.

The base currency of the Allianz Global Investors Fund is the Euro (EUR). The base currencies of the Subfunds are listed below:

Allianz Emerging Europe Equity Fund (in liquidation)

Due to the ongoing geopolitical tensions and sanctions related to the Ukraine/Russia situation, the valuation of certain assets within the Subfund remains constrained. The Moscow Stock Exchange continues to restrict access for international investors, and sanctions on Russian financial instruments persist. As a result, the calculation of the net asset value (NAV) remains suspended since 1 March 2022. The Subfund remains in liquidation as of 30 September 2025.

Importantly, no major updates have occurred in the geopolitical situation that would allow for the disposal of the remaining illiquid assets.

Following the implementation of a Side Pocket structure approved by the Luxembourg Supervisory Authority, the Subfund was split on 13 May 2024 into:

- Allianz Emerging Europe Equity Subfund, retaining illiquid Russian assets.
- Allianz Emerging Europe Equity 2, receiving the liquid assets via in-kind contribution.

On the same day, the original Subfund was formally put into liquidation. The liquidation process is contingent upon the disposal of the remaining illiquid assets, which is subject to the lifting of sanctions and restoration of market access. The Board of Directors, in agreement with the Manage-

ment Company, waived all fees for the liquidating Subfund effective 13 May 2024, resulting in zero ongoing charges.

Subsequently, on 25 June 2024, Allianz Emerging Europe Equity 2 was successfully merged into Allianz Emerging Markets Equity SRI, consolidating the liquid holdings into a broader emerging markets strategy.

A significant development occurred on 15 July 2024, when Yandex NV, a key holding in the illiquid Subfund, completed the divestment of its Russian operations and re-branded as Nebius Group NV. Trading resumed on NASDAQ on 21 October 2024. On 16 December 2024, the Subfund disposed of 166,772 shares of Nebius Group (ISIN NL0009805522), generating proceeds of EUR 5,185,447. These proceeds were distributed to shareholders with an ex-date of 20 January 2025.

The Subfund will continue to be disclosed in the annual and semi-annual reports until full liquidation is achieved, in line with CSSF guidance.

Valuation of Assets

Assets that are officially listed on a stock exchange are valued at the latest available price at valuation point.

Assets that are not officially listed on a stock exchange, but are traded on a regulated market or on other organised markets, are also valued at the latest available price, provided that, at the time of valuation, the Management Company considers that price to be the best possible price at which the assets can be sold.

Assets whose trade prices are not fair market prices, as well as all other assets, are valued at the probable realisation value. At its discretion, the Management Company may authorise other valuation methods if, in its consideration, such other methods better represent the fair value of the assets.

Financial futures transactions relating to currencies, securities, financial indices, interest rates and other permissible financial instruments and options thereon and corresponding warrants are, if they are listed on a stock exchange, valued at the most recent prices on the stock exchange in question. If there is no stock market listing, in particular for all OTC transactions, the valuation shall be made based on the likely realisable value.

Interest-rate swaps are valued at their market value in relation to the applicable interest rate curve. Swaps tied to indices and to financial instruments are valued at their market value, which is determined by reference to the index concerned or the financial instrument concerned.

Shares in UCITS or UCIs are valued at the latest determined and obtainable redemption price.

Cash and time deposits are valued at their nominal value plus accrued interest. If there are significant changes in market conditions, the valuation may be made at the realisation price.

Assets not denominated in the base currency of the Subfund (hereinafter called the "base currency of the Fund") are converted into the base currency of the Subfund at the most current middle-market rate of exchange.

Russian linked assets

As of 30th of June 2021, before the conflict, these assets were material to the Fund:

Income recognition

Interest income is accrued daily. Bank interest income is recognised on an accrual basis. Dividend income is accrued on the ex-dividend date. This income is shown net of any withholding taxes.

Securities Prices

In accordance with the Prospectus, the net asset values have been calculated by reference to the valuation day which might differ from their value on a dealing day.

The financial statements presented in this report have been prepared on the basis of the latest calculated net asset values in the period.

Valuation of investments

Had the financial statements in this report been prepared on the last available market price in the period, the net asset value would have been impacted by:

0.66% on Allianz Best Styles Euroland Equity
0.56% on Allianz Best Styles Global Equity
1.12% on Allianz Clean Planet
0.55% on Allianz Dynamic Multi Asset Strategy SRI 75
0.55% on Allianz Euroland Equity Growth

RMB or Chinese Renminbi refers to the official currency of the People's Republic of China. Unless the context otherwise requires, the term RMB refers to offshore Chinese Renminbi ("CNH") and not to onshore Chinese Renminbi ("CNY"). CNH represents the exchange rate of Chinese Renminbi that is traded offshore in Hong Kong or markets outside the People's Republic of China.

All-in-Fee

The Company pays all costs to be borne by the respective Subfund from the assets of that Subfund:

The Company pays a fee ("All-in-Fee") to the Management Company from the assets of the respective Subfund, unless this fee is charged directly to the Shareholder under the terms of a particular Share Class.

Fees for the Investment Managers used by the Management Company are paid by the Management Company from its All-in-Fee and, if applicable, from its performance related fee.

Provided that it is not charged directly to the Shareholder under the terms of a particular Share Class, the All-in-Fee is charged monthly in arrears on a pro rata basis on the average daily Net Asset Value of the respective Share Class of a Subfund. The amount of the All-in-Fee charged is listed thereafter.

In return for the payment of the All-in-Fee the Management Company releases the Company from the following, conclusive enumerated commissions and expenditures:

- management and central administration agent fees;
- distribution fees;
- the administration and custody fee of the Depositary;
- the fee of the Registrar and Transfer Agent;
- costs of the preparation (including translation) and dissemination of the Prospectus, Key Investor Information, Articles of Incorporation as well as annual, semi-annual and, if any, interim reports and other reports and notifications to Shareholders;
- costs of publishing the Prospectus, Key Investor Information, Articles of Incorporation, annual, semi-annual and, if any, interim reports, other reports and notifications to Shareholders, tax information, as well as Subscription and Redemption Prices, and official announcements made to the Shareholders;
- costs of auditing the Company and its Sub-Funds by the auditor;
- costs of registering the Shares for public distribution and/or the maintenance of such registration;

- costs of preparing share certificates and, if any, coupons and coupon renewals;
- paying agent and information agent fees;
- costs of assessing the Sub-Funds by nationally and internationally recognised rating agencies;
- expenses in connection with the establishment of a Sub-Fund;
- costs related to the use of index names, in particular licence fees;
- costs and fees incurred by the Company and by third parties authorised by the Company relating to the acquisition, use and maintenance of in-house or third-party computer systems used by Investment Managers and Investment Advisors;
- costs related to obtaining and maintaining a status authorising the direct investment in assets in a country or to act directly as a contracting partner in markets in a country;
- costs and expenses incurred by the Company, the Depository and third parties authorised by the Company or the Depository in connection with monitoring of investment limits and restrictions;
- costs for calculating the risk and performance figures and the calculation of performance-related fees for the Management Company by third parties appointed to do so;
- costs related to obtaining information about general Shareholders' meetings of companies or about other meetings of the owners of assets as well as costs related to direct participation or participation through authorised third parties in such meetings;
- postage, telephone, fax and telex fees.

Taxe d'abonnement

The Company is not liable to any Luxembourg tax on profits or income, nor is any income earned by any Subfund of the Company liable to any Luxembourg withholding tax.

The Company is, however, liable in Luxembourg to a tax of 0.05 % p.a. of its net asset value for retail share classes and of 0.01 % p.a. for institutional share classes. This tax is payable quarterly based on the net asset value of the Subfunds at the end of the relevant quarter.

Transaction costs

Transaction costs take into consideration all the costs that were reported or charged separately for the accounts of the Subfunds in the period from 1 October 2024 to 30 September 2025, and which are directly related to the buying or selling of particular assets. Not all transaction costs are

Performance Fee

The Management Company may charge a performance-related fee to Subfund assets for selected Subfunds for their management, provided that this fee is not charged directly to the shareholder in the framework of a special share class. The performance-related fee will be calculated in accordance with the method described in the current sales prospectus.

Name of the Subfund	Class	Performance Fee	Performance Fee of NAV in %
Allianz Asian Small Cap Equity	AT15 (USD)	70,751.13	0.49
	WT15 (EUR)	184,873.65	0.56
Allianz Credit Opportunities	IT13 (EUR)	250,779.81	0.18
	IT13 (H2-USD)	200.96	0.18

Retrocession of Management Fees

The investment management fees of certain underlying funds, in which some Subfunds invest, are partially or totally rebated by the investment managers of such underlying funds which have entered into agreements with Allianz Global Investors GmbH. Those amounts have been classified under caption other Income.

If a Subfund acquires shares of a UCITS or UCI which is directly or indirectly managed by the same investment manager or by another investment manager with which the Company is linked by common management or control, or by a substantial direct or indirect participation according to Part I of the Luxembourg Law of 17 December 2010 on Undertakings for Collective Investment then neither the Company nor the associated investment manager may charge fees for the subscription or redemption of units. In the case of the previous sentence, the Company will also reduce its share of the All-in-Fee for the part of units in such linked UCITS or UCI by the respective actual calculated fixed management fee of the UCITS or UCI acquired. If a Sub-Fund invests a substantial portion of its assets in other UCITS and/or other UCI as defined above, a management fee at the level of such UCITS or UCI (excluding any performance fee, if any) of no more than 2.50% per annum of their net asset value may be charged. However, a decrease does not occur with respect to such linked UCITS or UCI as far as a reimbursement of this actually calculated fixed management fee is made in favour of the respective Subfund.

Placement Fees

The Company may pay to the Management Company a placement fee ("Placement Fee") out of the assets of a Sub-Fund. The amount of the Placement Fee charged, if any, is in the sales prospectus.

The Placement Fee is determined as a fixed amount per Share which shall in particular serve as a compensation for the distribution. The Placement Fees is paid in a single instalment on the first Valuation Day after the expiry of the subscription period ("Payment Date") and at the same time added to the Sub-Fund's assets as prepaid expenses. The Net Asset Value on the Payment Date is therefore not impacted by the Placement Fee. The Sub-Fund's position of pre-paid expenses is then amortized over a defined number of years ("Amortization Period") on a daily basis from the Payment Date. The remaining position of prepaid-expenses per Share on each Valuation Day is calculated by linearly decreasing the fix amount per Share over the Amortization Period on a daily basis. After expiration of the Amortization Period the remaining position of prepaid expenses per Share is zero by definition.

Fair Value Pricing

A fair value pricing model is used for several Subfunds. A fair value pricing model means that the value of certain assets will be adjusted to more accurately reflect their fair

value based upon certain criteria. Such adjustments may occur during monitoring periods as defined by the Board of Directors from time to time, if a single country equity risk exposure (excluding equity exposure held via target funds) of a Subfund reaches or exceeds a certain trigger level, as defined by the Board of Directors from time to time, on the first Valuation Day of the respective monitoring period and, at the respective Subfund's deadline for receipt of applications, the main stock exchange of the respective country is already closed during normal course of business. If the aforementioned conditions are fulfilled the value of Subfund's assets which form part of the respective single country equity risk exposure based on the closing prices of the relevant country's main stock exchange is compared to their estimated value at the moment when the Subfund's Net Asset Value is calculated; the estimation is based on the movement of index orientated instruments since the close of business of the respective country's main stock exchange. If such comparison leads to a deviation in Subfunds estimated Net Asset Value by, at least, a certain trigger level, as defined by the Board of Directors from time to time, the Subfund's Net Asset Value will be adjusted accordingly to the extent that the unadjusted value would not represent their actual value.

Soft Commission Agreements

Generally, brokers are selected on the basis of best execution in accordance with the Manager's broker selection policy by taking various factors into consideration. In line with market practice, these brokers will generally charge a full service brokerage rate for trading and as part of their services, they will also provide the Manager with advisory services including, for example, in-house generated research reports.

The Company may pay, or be responsible for payment of soft commissions only insofar as:

- a) the Management Company and/or the Investment Managers, as the case may be, act at all times in the best interest of the Company and the shareholders when entering into soft commission arrangements;
- b) the goods and/or services provided by the broker dealers relate directly to the activities of the Management Company and/or the Investment Man-

agers, as the case may be, and such activities are of demonstrable benefits to the Shareholders; and

- c) any such soft commission is paid by the Management Company and/or the Investment Managers, as the case may be, to broker-dealers which are corporate entities and not individuals.

During the Company's fiscal year, services which are paid for through or by soft commissions were in majority limited to research, market analysis as well as data and quotation services.

For the below mentioned Subfunds distributed in Hong-Kong, Soft Commissions Agreements have been in place:

Allianz AI Income, Allianz All China Equity, Allianz Asia Ex China Equity, Allianz Asia Pacific Income, Allianz Asian Multi Income Plus, Allianz Best Styles Euroland Equity, Allianz Best Styles Global Equity, Allianz China A Opportunities, Allianz China A-Shares, Allianz China Equity, Allianz China Future Technologies, Allianz Clean Planet, Allianz Cyber Security, Allianz Dynamic Multi Asset Strategy SRI 15, Allianz Dynamic Multi Asset Strategy SRI 30, Allianz Dynamic Multi Asset Strategy SRI 50, Allianz Dynamic Multi Asset Strategy SRI 75, Allianz Euroland Equity Growth, Allianz Europe Equity Growth, Allianz Europe Equity Growth Select, Allianz Food Security, Allianz GEM Equity High Dividend, Allianz Global Artificial Intelligence, Allianz Global Income, Allianz Global Intelligent Cities Income, Allianz Global Metals and Mining, Allianz Global Water, Allianz High Dividend Asia Pacific Equity, Allianz Hong Kong Equity, Allianz Income and Growth, Allianz India Equity, Allianz Japan Equity, Allianz Little Dragons, Allianz Oriental Income, Allianz Pet and Animal Wellbeing, Allianz Positive Change, Allianz Select Income and Growth, Allianz Smart Energy, Allianz Thematica, Allianz Total Return Asian Equity, Allianz US Large Cap Value.

Transactions with Custodian, the Management Company and their Connected Parties, or their delegates

The following is a summary of significant related party transactions or transactions entered into during the year between the Subfunds and the Custodian, the Manager and their Connected Persons/Associates, or their delegates. Connected Persons/Associates are those as defined in the Code on Unit Trusts and Mutual Funds and the Mandatory Provident Fund Schemes Ordinance issued by the SFC and

MPFA respectively, as well as the document "Mutual Recognition of Funds (MRF) between Luxembourg and Hong Kong"; especially mentioned in the Code on Unit Trusts and Mutual Funds Appendix E under "Notes to the Financial Reports" No. 2. All such transactions during the year were carried out at arm's length in the ordinary course of business and on normal commercial terms. To the best of the knowledge of the Custodian and the Manager, the Subfunds did not have any other transactions with Connected Persons/Associates or their delegates except for those disclosed below.

a) Custodian Fee, Registrar Fee, Transfer Agent Fee, Administration Fee

State Street Bank International, Luxembourg Branch is acting as Custodian, Fund Accountant, Collateral Manager and Transfer Agent. Additionally, State Street Bank International, Luxembourg Branch is acting as paying agent and information agent. The Company pays a fee ("All-in-Fee") to the Management Company from the assets of the respective Subfund, unless this fee is charged directly to the Shareholder under the terms of a particular Share Class. In return for the payment of the All-in-Fee the Management Company releases the Company from the enumerated commissions and expenditures related to State Street Bank International GmbH, Luxembourg Branch:

- the administration and custody fee of the Depositary
- the fee of the Registrar and Transfer Agent
- the collateral manager Fee
- Paying agent and information agent fees

Information relating to the "All-in-Fee" (fee to the management-company) is set out on page 1584.

All Securities and money-market instruments are held via the Custodian State Street Bank International, Luxembourg Branch.

b) Management Fee and Central Administration Fee

Allianz Global Investors GmbH, Luxembourg Branch is acting as Management Company (acting as Fund Manager and Central Administrator). The Company pays a fee ("All-in-Fee") to the Management Company from the assets of the respective Subfund, unless this fee is charged directly to the Shareholder under the terms of a particular share class. Information relating to the "All-in-Fee" (fee to the management-company) is set out on page 1584.

c) Brokerage

In its purchases and sales of investments, the Subfunds utilize among others the brokerage services of State Street Bank International, Luxembourg Branch, which is a member of the State Street Bank Corporation. For FX Transactions which are executed by the Custodian, no Commission is charged to the fund directly. Transactions in bonds can be executed at fixed price; wherefore the commission is included already in the price.

d) Banking Services

The Custodian is a subsidiary within State Street Bank Corporation. The Subfunds utilize the banking services of certain subsidiaries of the State Street Bank Corporation in the ordinary course of its banking and securities custodian business. Information relating to balances outstanding as at the date of financial statements, the interest income earned from deposit placements are shown in the Statement of Operations of each Subfunds. The banking services provided to the Subfunds and shown in the Statement of Operations are performed by State Street Bank International, Luxembourg Branch.

e) Subscription and redemption of units of the Subfunds

Where applicable, the Management Company (Allianz Global Investors GmbH, Branch Luxembourg) of the Subfunds, its directors and its investment advisors, may invest from time to time in the Subfunds in accordance with the principles in the Management Company's code of ethics. Allianz Global Investors GmbH holds the following units in the Hongkong distributed funds as Seed Capital. Information relating to cross investments with the Allianz Global Investors Fund is set out in the Investment Portfolios of the subfunds.

* State Street Bank International, Luxembourg Branch is used only for transactions in FX's as broker. The commission for these transactions is not debited to the subfund.

g) Information on Performance Fee (as commission to the Management Company) are set out under "Performance Fee" on page 1606 and "Ongoing Charges" on page 1614.

Collateral Management

For some Subfunds, the Management Company has implemented collateral management processes to mitigate counterparty risks with OTC-counterparties. OTC-transactions are effected on the basis of standardised contracts that also provide for respective requirements in relation to accepted type of eligible collateral and discounts for collateral valuation ("haircuts"). The collateral management is performed on behalf of the management company by SST collateral manager to which the Management Company outsourced the activity.

Swing pricing

A Subfund may suffer reduction of the Net Asset Value per share due to investors purchasing, selling and/or switching in and out of shares of a Subfund at a price that does not reflect the dealing costs associated with this Subfund's portfolio trades undertaken by the Investment Manager to accommodate cash inflows or outflows. In order to reduce this impact and to protect shareholders' interests, a swing pricing mechanism may be adopted by the Company as part of the general valuation policy. According to the prospectus swing pricing is foreseen for the following funds: Allianz Asian Small Cap Equity, Allianz Balanced Income and Growth, Allianz Convertible Bond, Allianz Dynamic Asian High Yield Bond, Allianz Emerging Markets Corporate Bond, Allianz Emerging Markets Equity, Allianz Emerging Markets Equity Opportunities, Allianz Emerging Markets Equity SRI, Allianz Emerging Markets Select Bond, Allianz Emerging Markets Short Duration Bond, Allianz Emerging Markets Sovereign Bond, Allianz Emerging Markets SRI Bond, Allianz Euro Credit SRI, Allianz Euro Government Bond, Allianz Euro High Yield Bond, Allianz Euro High Yield Defensive, Allianz Europe Small Cap Equity, Allianz Flexi Asia Bond, Allianz GEM Equity High Dividend, Allianz German Small and Micro Cap, Allianz Global Aggregate Bond, Allianz Global Credit, Allianz Global Diversified Credit, Allianz Global Floating Rate Notes Plus, Allianz Global Government Bond, Allianz Global High Yield, Allianz Global Opportunistic Bond, Allianz Green Bond, Allianz Japan Smaller Companies Equity, Allianz Little Dragons, Allianz Oriental Income, Allianz SDG Euro Credit, Allianz Selective Global High Income, Allianz SGD Income, Allianz Short Duration Global Bond SRI, Allianz Strategic Bond, Allianz Target Maturity Euro Bond I, Allianz Target Maturity

Euro Bond II, Allianz Target Maturity Euro Bond III, Allianz Target Maturity Euro Bond IV, Allianz Target Maturity Euro Bond V, Allianz US High Yield, Allianz US Investment Grade Credit, Allianz US Short Duration High Income Bond. The extent of such adjustment will be reset by the Company on a periodic basis to reflect an approximation of current dealing and other costs. Such price adjustment may vary from Subfund to Subfund and will not exceed 3% of the original Net Asset Value per share. The price adjustment will be available on request from the Management Company at (i) its registered office and/or (ii) on the webpage <https://regulatory.allianzgi.com>. Please note that a partial swing pricing is applied. As at 30 September 2025 none of the NAVs of the above mentioned Subfunds was swung.

Ongoing Charges

The Ongoing Charges are costs incurred by the Subfunds (or the respective Share Classes) during the preceding 12 months (excluding transaction costs) and are expressed as a ratio of the average volume of the Subfunds (or of the average volume of the respective Share Classes) ("Ongoing Charges"). In addition to the All-in-Fee, all other costs are considered except for the incurred transaction costs and any performance-related fees.

If a Subfund invests its assets in other UCITS or UCI that publish Ongoing Charges, the Ongoing Charges of these other UCITS or UCI are taken into consideration when calculating Ongoing Charges for the Subfund ("Synthetic Ongoing Charges"); however, if these UCITS or UCI do not publish their own Ongoing Charges, then it is not possible to take the Ongoing Charges of the other UCITS or UCI into consideration when calculating Ongoing Charges.

TBA (to be announced) Securities

TBA positions refer to the common trading practice in the mortgage-backed securities market in which a commitment to buy or sell a mortgage backed security (issued by Ginnie Mae, Fannie Mae or Freddie Mac) for a fixed future price at a future date is given. At the time of purchase of a TBA, the exact underlying pool of mortgages that is to be delivered is not known, but the main characteristics are specified. Such transactions are entered into with financial institutions specialised in such transactions.

Although the Subfund may enter into TBA purchase commitments with the intention of acquiring securities, the Subfund may also close a position prior to settlement by entering into an opposite transaction in order to fix the economical result of the initial transaction.

In the period under review the Subfunds entered into TBA transactions which are presented in the Statement of Net Assets within the unrealized gain/loss.

Remaining cash balances on liquidated sub-funds

As at 30 September 2025, the following balances were still held by liquidated subfunds in the form of cash at bank:

Name of the Subfund	Currency	Remaining Cash
Allianz Best Ideas 2025	DKK	11,619.42
	EUR	34,745.42
Allianz China Strategic Bond	CNY	834.82
	EUR	47.56
	USD	3,440.41

Allianz Best Ideas 2025	EUR	-460.21
Allianz Global Emerging Markets Equity Dividend	USD	-72.63
Allianz Selective Global High Income	USD	61.20

Audit report

To the Shareholders of
Allianz Global Investors Fund

Our opinion

In our opinion, the accompanying financial statements give a true and fair view of the financial position of Allianz Global Investors Fund (the “Fund”) and of each of its sub-funds as at 30 September 2025, and of the results of their operations and changes in their net assets for the year then ended in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of the financial statements.

What we have audited

The Fund’s financial statements comprise:

- the investment portfolios as at 30 September 2025;
- the combined statement of operations for the Fund and the statement of operations for each of the sub-funds for the year then ended;
- the combined statement of net assets for the Fund and the statement of net assets for each of the sub-funds as at 30 September 2025;
- the combined statement of changes in net assets for the Fund and the statement of changes in net assets for each of the sub-funds for the year then ended; and
- the notes to the financial statements, which include a summary of significant accounting policies.

Basis for opinion

We conducted our audit in accordance with the Law of 23 July 2016 on the audit profession (Law of 23 July 2016) and with International Standards on Auditing (ISAs) as adopted for Luxembourg by the “Commission de Surveillance du Secteur Financier” (CSSF). Our responsibilities under the Law of 23 July 2016 and ISAs as adopted for Luxembourg by the CSSF are further described in the “Responsibilities of the “Réviseur d’entreprises agréé” for the audit of the financial statements” section of our report.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

We are independent of the Fund in accordance with the International Code of Ethics for Professional Accountants, including International Independence Standards, issued by the International Ethics Standards Board for Accountants (IESBA Code) as adopted for Luxembourg by the CSSF together with the ethical requirements that are relevant to our audit of the financial statements. We have fulfilled our other ethical responsibilities under those ethical requirements.

Other information

The Board of Directors of the Fund is responsible for the other information. The other information comprises the information stated in the annual report but does not include the financial statements and our audit report thereon.

*PricewaterhouseCoopers Assurance, Société coopérative, 2 rue Gerhard Mercator, L-2182 Luxembourg

*Cabinet de révision agréé. Expert-comptable (autorisation ministérielle n°10181659)
R.C.S. Luxembourg B294273 - TVA LU36559370*

Our opinion on the financial statements does not cover the other information and we do not express any form of assurance conclusion thereon.

In connection with our audit of the financial statements, our responsibility is to read the other information identified above and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

Responsibilities of the Board of Directors of the Fund for the financial statements

The Board of Directors of the Fund is responsible for the preparation and fair presentation of the financial statements in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of the financial statements, and for such internal control as the Board of Directors of the Fund determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the Board of Directors of the Fund is responsible for assessing the Fund's and each of its sub-funds' ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the Board of Directors of the Fund either intends to liquidate the Fund or close any of its sub-funds or to cease operations, or has no realistic alternative but to do so.

Responsibilities of the “Réviseur d’entreprises agréé” for the audit of the financial statements

The objectives of our audit are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an audit report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with the Law of 23 July 2016 and with ISAs as adopted for Luxembourg by the CSSF will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As part of an audit in accordance with the Law of 23 July 2016 and with ISAs as adopted for Luxembourg by the CSSF, we exercise professional judgment and maintain professional scepticism throughout the audit. We also:

- identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control;
- obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Fund's internal control;

- evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the Board of Directors of the Fund;
- conclude on the appropriateness of the Board of Directors of the Fund's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Fund's or any of its sub-funds' ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our audit report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our audit report. However, future events or conditions may cause the Fund or any of its sub-funds (except for Allianz Europe Emerging Equity which has been put into liquidation as of 13th May 2024; Allianz Global Multi Asset Balanced, Allianz Social Conviction Equity and Allianz Systematic Enhanced US Equity where a decision to liquidate exists) to cease to continue as a going concern;
- evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

Luxembourg, 18 December 2025

Determining the market risk and leverage effect

As part of the risk-management procedure the market risk of the Subfund is measured and limited either using the commitment or Value-at-Risk (VaR) approach (relative or absolute VaR). When determining the market risk of the Company, the commitment approach takes into account the additional risk that is generated through the use of de-

relative financial instruments. The VaR approach represents a statistical method for calculating the potential loss arising from value changes in the whole Subfund. The VaR calculation is generally based on the "Historical VaR" method (confidence level of 99%, an assumed holding period of 10 days, data history of three years, using a decay factor of 0.9947), otherwise the alternative calculation method is shown in the following table.

As at the end of the financial year, the following approach applied to the Subfunds for calculating the market risk:

Name of the Subfund	Approach	Reference assets/absolute VaR limit

The minimum, maximum and average risk budget utilisation (RBU) of the Company in the period under review can be seen in the following table. For Subfunds using the relative value-at-risk (VaR) approach, the utilisation is reported in relation to the limit stipulated by the regulatory authorities (i.e. 2 times the VaR of the defined benchmark). For

Subfunds using the absolute VaR approach, it is reported in relation to the absolute VaR limit indicated in the table above. The table also shows the average leverage effect of the Company in the period under review. The average leverage effect is calculated as the average sum of notionals of derivatives.

The information on employee remuneration does not include remuneration paid by delegated managers to their employees. The Management Company does not pay remuneration to employees of delegated companies directly from the fund.

Setting the remuneration

Allianz Global Investors GmbH ("Management Company") is subject to the supervisory requirements applicable to investment management companies with regard to structuring the remuneration system. The management of Allianz Global Investors GmbH ("Management Company") is usually responsible for decision-making about determination of employee remuneration. Decisions about the remuneration of the management itself are taken by the Shareholder.

The "Management Company" has set up a remuneration committee to perform the duties required by law. This committee consists of two members of the Fund's Supervisory Board, each of whom is appointed by the Supervisory Board, where one member should be an employee representative

Working in close cooperation with the Risk Management and Legal & Compliance departments as well as with external advisers and in conjunction with the management, the

Human Resources department has developed the Management Company's remuneration policy under the requirements of the UCITS and AIFM Directives. This remuneration policy applies to the Management Company domiciled in Germany and to its branches.

Remuneration structure

The primary components of monetary remuneration are the basic salary, which typically reflects the scope, responsibilities and experience required in a particular role, and an annual variable remuneration.

The total amount of the variable remuneration payable throughout the Management Company depends on the performance of the business and on the Management Company's risk position and will therefore vary every year. In this respect, the allocation of specific amounts to particular employees will depend on the performance of the employee and their departments during the period under review.

Variable remuneration includes an annual bonus paid in cash following the end of the financial year. In the case of employees whose variable remuneration exceeds a certain threshold, a substantial portion of the annual variable remuneration is deferred for a period of three years.

The deferred portions increase in line with the level of the variable remuneration. Half of the deferred amount is linked to the performance of the Management Company, and the other half is invested in the funds managed by AllianzGI. The amounts ultimately distributed depend on the Management Company's business performance or the performance of shares in certain investment funds over several years.

In addition, the deferred remuneration elements may be withheld under the terms of the plan.

Performance evaluation

The level of pay awarded to employees is linked to both quantitative and qualitative performance indicators.

Quantitative indicators are based on measurable goals. Qualitative indicators, on the other hand, take into account the employee's behavior in relation to the management company's core values of excellence, passion, integrity and respect. These indicators also include determining that there are no material violations of regulatory requirements or deviations from compliance and risk standards, including AllianzGI's sustainability risk management policy. Details can be found in the risk management policy statement at <https://www.allianzgi.com/de/our-firm/esg>.

For Investment managers, whose decisions make a real difference in achieving our clients' investment goals, quantitative indicators are geared towards sustainable investment performance. For portfolio managers in particular, the quantitative element is aligned with the Benchmark of the client portfolios they manage or with the client's expected return, measured over a period of one year and three years.

For client-facing employees, goals also include client satisfaction, which is measured independently.

The remuneration of employees in controlling functions is not directly linked to the business performance of individual departments monitored by the controlling function.

Risk takers

The following groups of employees were qualified as risk carriers: Members of management, risk takers and employees in controlling positions (as identified in current organisational charts and job profiles and as assessed in terms of

the influence on the risk profile) as well as all employees whose total remuneration puts them in the same remuneration category as members of management and risk takers and whose activities have a significant effect on the risk profiles of the company and the investment funds managed by it.

Risk avoidance

AllianzGI has comprehensive risk reporting in place, which covers both current and future risks of our business activities. Risks which exceed the organisation's risk appetite are presented to our Global Remuneration Committee, which will decide, if necessary, on the adjustments to the total remuneration pool.

Individual variable compensation may also be reduced or withheld in full if employees violate our compliance policies or take excessive risks on behalf of the Management Company.

Annual review and material changes to the remuneration system

The Remuneration Committee did not find any irregularities during the annual review of the remuneration system, including a review of the existing remuneration structures as well as implementation of the regulatory requirements and compliance with them. In the course of this centralised and independent review, it was also found that the remuneration policy had been implemented in accordance with the remuneration regulations stipulated by the Supervisory Board. Furthermore, no material changes were made to the remuneration policy in the past financial year.

Further unaudited information

Techniques for efficient portfolio management

Sections 35 (c)-(f) and 40 (a)-(c) of the European Securities and Markets Authority's (ESMA's) guideline 2012/832 on Exchange-Traded Funds (ETFs) and other UCITS issues require disclosures in the Subfund's annual report on the exposure obtained through efficient portfolio management techniques (security lending, repos/reverse-repos) and/or derivatives, disclosure of the identity of the counterparties to these transactions and statements as to the type and amount of collateral received in this regard and statements as to the issuer's identity in connection with the OTC derivatives and collateral in the form of securities issued by a Member State. The following table shows the minimum, maximum and average exposure during the period under review, broken down by technique and derivatives. The figures for the Company's minimum and maximum exposure indicate the minimum and maximum exposure during the period under review as a percentage of the Company's net assets on that day. Average exposure is calculated as the simple average of the daily exposure of the Company as a percentage of Company's net assets each day. The exposure (counterparty) from techniques for efficient portfolio management and/or derivatives was looked at separately for exchange-traded derivatives, OTC derivatives (including total return swaps), repurchase agreements (repos/reverse-repos) and securities lending.

Exchange-Traded Derivatives

During the period under review, the below Subfunds had positions in exchange-traded derivatives, however, initial and variation margins were on deposit at all times and therefore the positions had no open exposure.

There are no collateral for the remaining Subfunds as per 30 September 2025.

Repurchase agreements (repos/reverse repos)

During the period under review, the Company did not enter into any repurchase agreements.

Securities lending

During the period under review, the Company did not enter into any agreements in the form of securities loans.

During the period under review, the remaining Subfunds had neither positions in exchange-traded derivatives nor entered into repurchase agreements or into agreements in the form of securities loans.

Total Return Swaps

Allianz Dynamic Commodities

The composition of the Underlying of the Total Return Swap on Commodity Basket - Fund receives Commodity notional amount - pays 1M SOFR is the following:

The Strategy will focus on exchange traded certificates ("ETC") which replicate the exposure to single commodities.

The composition of the Underlying of the Total Return Swap on Index - Fund receives Bloomberg ex-Agriculture and Livestock Capped 6 Month Forward Index - pays 0.04%, the composition of the Underlying of the Total Return Swap on Index - Fund receives Bloomberg ex-Agriculture and Livestock Capped 6 Month Forward Index - pays 0.05% and the composition of the Underlying of the Total Return Swap on Index - Fund receives Bloomberg ex-Agriculture and Livestock Capped 6 Month Forward Index - pays 0.06% is the following:

The Strategy will focus on an index that provides commodities exposure through a diversified basket of e.g. 3 or 6 months commodity futures excluding agriculture and livestock. The swap allows investors to participate in the performance of such strategy. The total Commitment equivalent exposure is 109.05% of the TNA as per 30 September 2025.

Allianz Multi Asset Long / Short

The composition of the Underlying of the Total Return Swap on Commodity Basket - Fund receives Commodity notional amount - pays 0.51% is the following:

The swap allows the investor to participate in the performance of a strategy which is invested in exchange traded certificates ("ETC") which replicates the exposure to single commodities.

The Commitment equivalent exposure is 12.78% of TNA as per 30 September 2025.

As part of efficient portfolio management, the Company entered into transactions with the following counterparties during the period under review:

Bank of America Corp, Bank of New York Mellon Corp, Bank of Nova Scotia, Barclays Plc, BNP Paribas SA, CITIGROUP EUROPE, CITIGROUP GLOBAL MARKETS EUROPE AG, Citigroup Inc, Commerzbank AG, Deutsche Bank AG, Goldman Sachs Group Inc, HSBC Holdings Plc, INCOME REPATRIATION HONG KONG IBS (HN1), JPMorgan Chase & Co, London Clearing House France, London Stock Exchange Group Plc, Morgan Stanley, Nomura Holdings Inc, Societe Generale SA, Standard Chartered Plc, STATE STREET BANK, State Street Corp, Toronto-Dominion Bank, UBS AG SUISSE (DERI), UBS Group AG, UniCredit SpA, Wells Fargo & Co

There was no issuer whose collateral received by this issuer exceeded 20% of the Company's net asset value at the reporting date.

At the reporting date the Company was not completely collateralised by securities issued or guaranteed by a Member State.

Article 9

Please refer to Annex on page 2778 for these funds which take into account the EU criteria for environmentally sustainable economic activities, since they commit to a minimum share of sustainable investments with an environmental objective aligned with the EU Taxonomy.

Subfunds:

Allianz Better World Defensive, Allianz Better World Dynamic, Allianz Better World Moderate, Allianz Green Bond, Allianz SDG Euro Credit, Allianz SDG Global Equity

Product name:

Allianz ActiveInvest Balanced

Legal entity identifier: 529900NM5P2JVX9T0X69

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 45.78% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz ActiveInvest Balanced (the "Sub-Fund") promoted a broad range of environmental and social characteristics. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe direct investments which were selected with respect to sustainability aspects and other internal funds ("Target Funds") which promote environmental or social characteristics, or which had Sustainable Investments as an objective for at least 70% of the Sub-Fund's assets. Target Funds were counted into the 70% if they disclose according to Art 8 Sustainable Finance Disclosure Regulation ("SFDR") or Art 9 SFDR. Direct investments were counted into the 70% if they were managed according to another approach of the Investment Manager qualifying as Art 8 or 9 SFDR).
- Further, the Investment Manager adhered to a minimum percentage of 10.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the Sub-Fund's assets invested in direct investments which are selected with respect to sustainability aspects and Target Funds which promote environmental or social characteristics, or which have Sustainable Investments as an objective at the end of the financial year was 87.73 %. In case the Investment Manager decides to directly invest in Debt or Equity Securities which are selected with respect to sustainability aspects the adherence to the respective binding element will be reported.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the Sub-Fund's assets invested in direct investments which are selected with respect to sustainability aspects and Target Funds which promote environmental or social characteristics, or which have Sustainable Investments as an objective at the end of the financial year was	87.73 %	92.72 %	87.25 %
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. The exclusion criteria did not apply to Target Funds managed by another Investment Manager and for Target Funds managed by the Investment Manager, but which did not promote environmental or social characteristics or did not have Sustainable Investments as an objective. The Investment Manager would limit this part of the Sub-Fund assets to 30%, so that the exclusion criteria applied to the majority of the Sub-Funds assets. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogeneous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
ALLIANZ DYN ALLOC PLS EQ-WT	N/A	15.63 %	Luxembourg
ALLIANZ EURO BOND-WT	N/A	9.99 %	Luxembourg
ALLIANZ-BE STY SRI EU EQ-WT9	N/A	8.31 %	Luxembourg
ALLIANZ-B STY SRI GB EQ-WT9E	N/A	7.25 %	Luxembourg
ALLIANZ EURO RENTENFONDS-P	N/A	5.85 %	Germany
ALLIANZ EURO CREDIT SRI-WT	N/A	5.81 %	Luxembourg

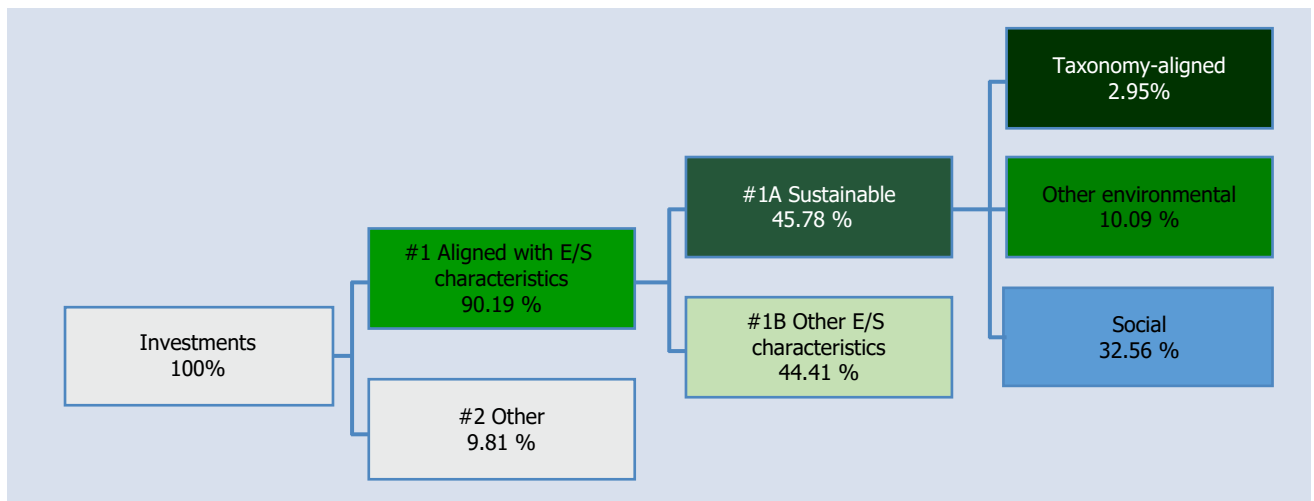

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- **In which economic sectors were the investments made?**

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

-------	----------------	--------

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 14.75 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	2.75 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.27 %
Enabling activities	1.08 %

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	2.95 %	1.5 %	2.48 %
Capex	3.72 %	1.92 %	0 %
Opex	2.96 %	1.51 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	3.46 %	1.82 %	2.92 %
Capex	4.36 %	2.33 %	0 %
Opex	3.47 %	1.83 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 10.09% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 32.56% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz ActiveInvest Defensive

Legal entity identifier: 52990094VFHIL03QZ388

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 40% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz ActiveInvest Defensive (the "Sub-Fund") promoted a broad range of environmental and social characteristics. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe direct investments which were selected with respect to sustainability aspects and other internal funds ("Target Funds") which promote environmental or social characteristics, or which had Sustainable Investments as an objective for at least 70% of the Sub-Fund's assets. Target Funds were counted into the 70% if they disclose according to Art 8 Sustainable Finance Disclosure Regulation ("SFDR") or Art 9 SFDR. Direct investments were counted into the 70% if they were managed according to another approach of the Investment Manager qualifying as Art 8 or 9 SFDR).
- Further, the Investment Manager adhered to a minimum percentage of 10.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the Sub-Fund's assets invested in direct investments which are selected with respect to sustainability aspects and Target Funds which promote environmental or social characteristics, or which have Sustainable Investments as an objective at the end of the financial year was 91.82 %. In case the Investment Manager decides to directly invest in Debt or Equity Securities which are selected with respect to sustainability aspects the adherence to the respective binding element will be reported.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the Sub-Fund's assets invested in direct investments which are selected with respect to sustainability aspects and Target Funds which promote environmental or social characteristics, or which have Sustainable Investments as an objective at the end of the financial year was	91.82 %	95.64 %	91.73 %
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. The exclusion criteria did not apply to Target Funds managed by another Investment Manager and for Target Funds managed by the Investment Manager, but which did not promote environmental or social characteristics or did not have Sustainable Investments as an objective. The Investment Manager would limit this part of the Sub-Fund assets to 30%, so that the exclusion criteria applied to the majority of the Sub-Funds assets. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogeneous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
ALLIANZ EURO RENTENFONDS-P	N/A	16.42 %	Germany
ALLIANZ EURO BOND-WT	N/A	15.62 %	Luxembourg
ALLIANZ DYN ALLOC PLS EQ-WT	N/A	12.48 %	Luxembourg
ALLIANZ EURO CREDIT SRI-WT	N/A	10.50 %	Luxembourg

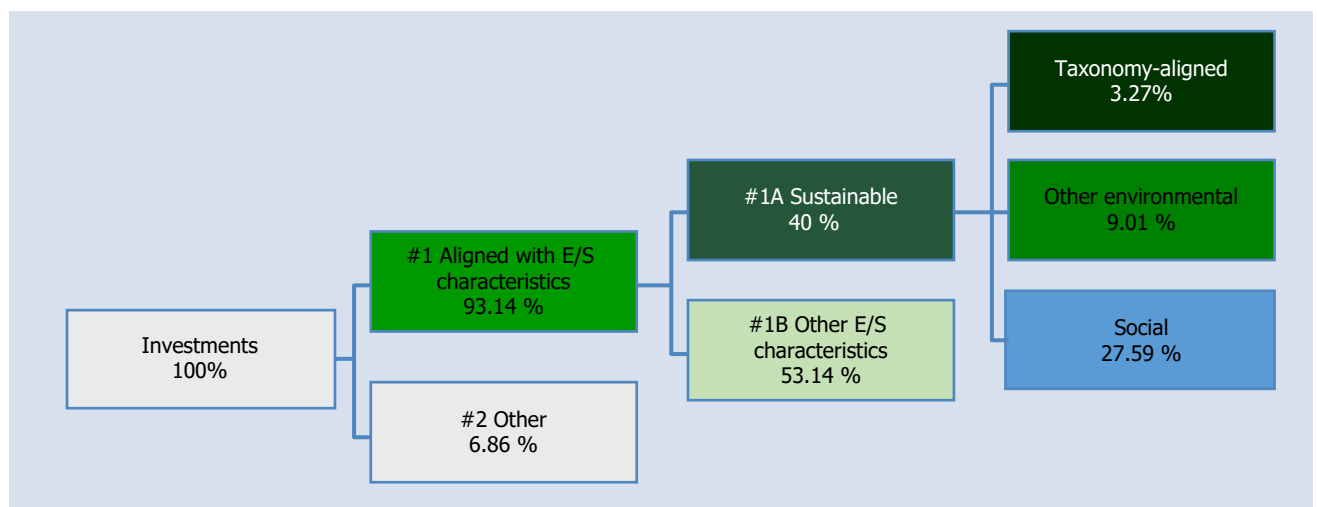

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- **In which economic sectors were the investments made?**

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

-------	----------------	--------

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 26.07 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	3.13 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.24 %
Enabling activities	1.22 %

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	3.27 %	1.84 %	2.25 %
Capex	4.22 %	2.64 %	0 %
Opex	3.25 %	2.07 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	4.43 %	2.53 %	3.18 %
Capex	5.71 %	3.62 %	0 %
Opex	4.4 %	2.84 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 9.01% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 27.59% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz ActiveInvest Dynamic

Legal entity identifier: 529900HO90TX5SRRYZ37

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 53.42% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz ActiveInvest Dynamic (the "Sub-Fund") promoted a broad range of environmental and social characteristics. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe direct investments which were selected with respect to sustainability aspects and other internal funds ("Target Funds") which promote environmental or social characteristics, or which had Sustainable Investments as an objective for at least 70% of the Sub-Fund's assets. Target Funds were counted into the 70% if they disclose according to Art 8 Sustainable Finance Disclosure Regulation ("SFDR") or Art 9 SFDR. Direct investments were counted into the 70% if they were managed according to another approach of the Investment Manager qualifying as Art 8 or 9 SFDR).
- Further, the Investment Manager adhered to a minimum percentage of 10.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the Sub-Fund's assets invested in direct investments which are selected with respect to sustainability aspects and Target Funds which promote environmental or social characteristics, or which have Sustainable Investments as an objective at the end of the financial year was 86.71 %. In case the Investment Manager decides to directly invest in Debt or Equity Securities which are selected with respect to sustainability aspects the adherence to the respective binding element will be reported.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the Sub-Fund's assets invested in direct investments which are selected with respect to sustainability aspects and Target Funds which promote environmental or social characteristics, or which have Sustainable Investments as an objective at the end of the financial year was	86.71 %	94.04 %	81.19 %
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. The exclusion criteria did not apply to Target Funds managed by another Investment Manager and for Target Funds managed by the Investment Manager, but which did not promote environmental or social characteristics or did not have Sustainable Investments as an objective. The Investment Manager would limit this part of the Sub-Fund assets to 30%, so that the exclusion criteria applied to the majority of the Sub-Funds assets. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogeneous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
ALLIANZ DYN ALLOC PLS EQ-WT	N/A	18.18 %	Luxembourg
ALLIANZ-B STY SRI GB EQ-WT9E	N/A	13.25 %	Luxembourg
ALLIANZ-BE STY SRI EU EQ-WT9	N/A	12.02 %	Luxembourg
ALLIANZ-EMG MKT EQ SRI-WT9EU	N/A	7.36 %	Luxembourg

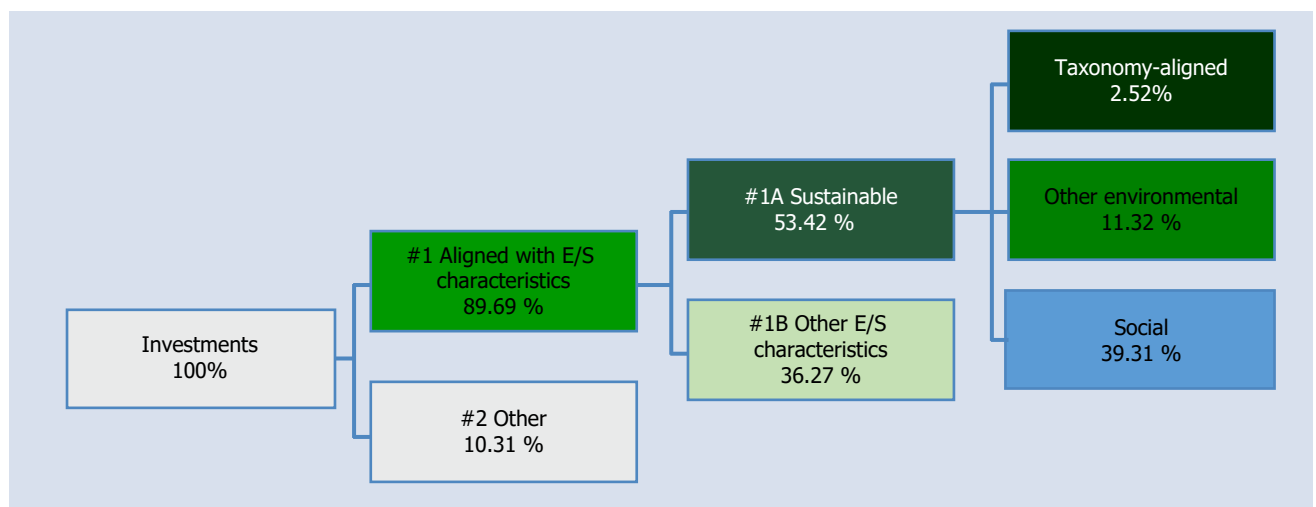

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- **In which economic sectors were the investments made?**

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 2.22 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	2.26 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.32 %
Enabling activities	0.92 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	2.52 %	1.56 %	2.5 %
Capex	3.06 %	1.97 %	0.01 %
Opex	2.56 %	1.53 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	2.58 %	1.63 %	2.56 %
Capex	3.13 %	2.06 %	0.01 %
Opex	2.61 %	1.6 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 11.32% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 39.31% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Advanced Fixed Income Euro

Legal entity identifier: 529900W7WKKWPZ6I8386

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 33.72% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Advanced Fixed Income Euro (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- Further, the Investment Manager adhered to a minimum percentage of 2.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does

this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 10% of their revenue from thermal coal extraction,

- active within the utility sector and generating more than 20% of their revenues from coal,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The actual percentage of the portfolio with a proprietary sustainability score of 1 or more was 99.15 % at the financial year end. The actual percentage of the benchmark with a proprietary sustainability score was 94.31 %. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a proprietary sustainability score was	99.15%	98.53%	97.71%
The actual percentage of the benchmark with a proprietary sustainability score was	94.31%	97.56%	96.52%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country

--	----------------------------	--------	--------

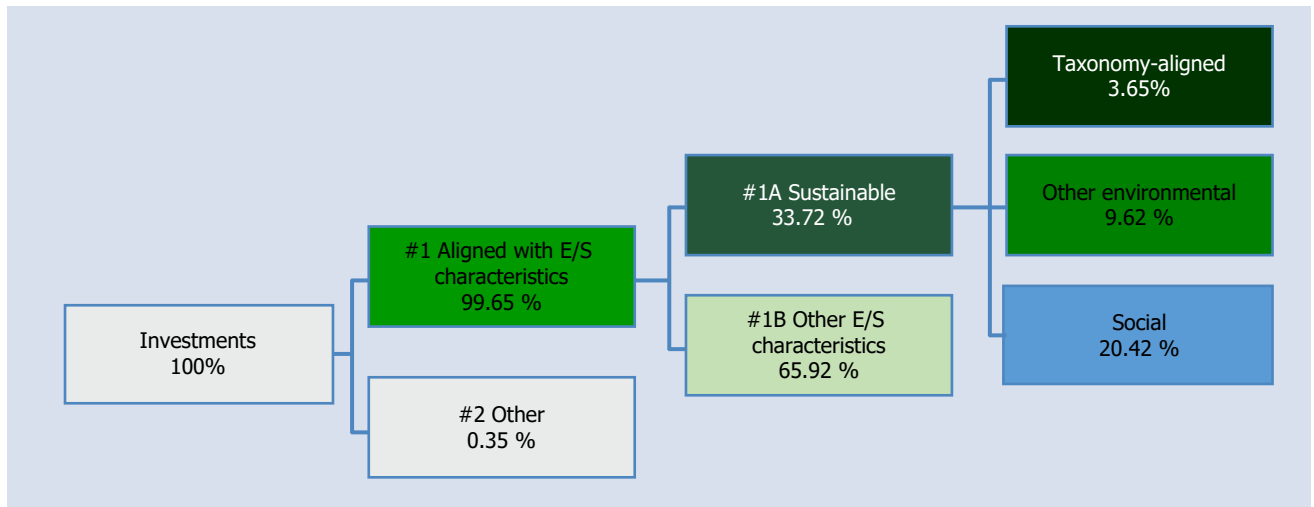

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 45.25 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?**

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	3.58 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.31 %
Enabling activities	1.33 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	3.65 %	3.67 %	3.11 %

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 9.62% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 20.42% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- [How did the reference benchmark differ from a broad market index?](#)

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- [How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?](#)

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- [How did this financial product perform compared with the reference benchmark?](#)

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did this financial product perform compared with the broad market index?

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Product name:

Allianz Advanced Fixed Income Global

Legal entity identifier: 549300GEEY2YMMHYW726

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 15% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Advanced Fixed Income Global (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- Further, the Investment Manager adhered to a minimum percentage of 2.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does

this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 10% of their revenue from thermal coal extraction,

- active within the utility sector and generating more than 20% of their revenues from coal,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The actual percentage of the portfolio with a proprietary sustainability score of 1 or more was 98.79 % at the financial year end. The actual percentage of the benchmark with a proprietary sustainability score was 100 %. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a proprietary sustainability score was	98.79%	97.24%	98.99%
The actual percentage of the benchmark with a proprietary sustainability score was	100%	99.52%	100%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	6.52 %
C10	Manufacture of food products	0.61 %

Other	NOT SECTORIZED	2.78 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 76.61 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.68 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.94 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	0.65 %	0.56 %	0.48 %
Capex	1.09 %	0.85 %	0 %
Opex	1.01 %	0.74 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	2.76 %	3.14 %	2.63 %
Capex	4.66 %	4.75 %	0 %
Opex	4.31 %	4.13 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 4.07% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 10.28% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Advanced Fixed Income Global Aggregate

Legal entity identifier: 549300XB0VU2T4JU6365

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 25.71% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Advanced Fixed Income Global Aggregate (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- Further, the Investment Manager adhered to a minimum percentage of 2.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- [How did the sustainability indicators perform?](#)

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 10% of their revenue from thermal coal extraction,

- active within the utility sector and generating more than 20% of their revenues from coal,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The actual percentage of the portfolio with a proprietary sustainability score of 1 or more was 97.68 % at the financial year end. The actual percentage of the benchmark with a proprietary sustainability score was 90.04 %. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

The binding elements except for one criterion were adhered to throughout the financial year 2025. The criterion which was not adhered to for a certain time period led to an investment limit violation. This violation was resolved according to the internal policies of the Investment Manager.

- [... and compared to previous periods?](#)

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a proprietary sustainability score was	97.68%	94.22%	96.59%
The actual percentage of the benchmark with a proprietary sustainability score was	90.04%	86.55%	76.1%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	2.23 %

Other	NOT SECTORIZED	8.96 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 45.5 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

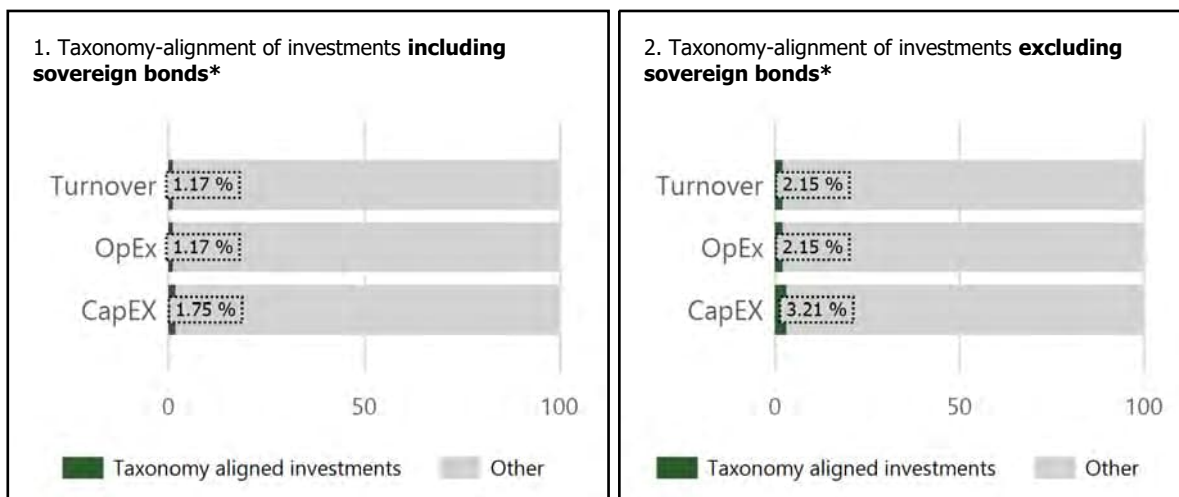

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	1.19 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.11 %
Enabling activities	0.80 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	1.17 %	1.17 %	1.14 %
Capex	1.75 %	1.77 %	0 %
Opex	1.17 %	1.39 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	2.15 %	2.38 %	2.25 %
Capex	3.21 %	3.59 %	0 %
Opex	2.15 %	2.82 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 4.83% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 19.59% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these

investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Allianz Advanced Fixed Income Short Duration

Legal entity identifier: 529900QKKROQJ7LYYV65

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 35.18% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Advanced Fixed Income Short Duration (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- Further, the Investment Manager adhered to a minimum percentage of 10.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 10% of their revenue from thermal coal extraction,

- active within the utility sector and generating more than 20% of their revenues from coal,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The actual percentage of the portfolio with a proprietary sustainability score of 1 or more was 98.69 % at the financial year end. The actual percentage of the benchmark with a proprietary sustainability score was 94.58 %. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a proprietary sustainability score was	98.69%	98.51%	99.04%
The actual percentage of the benchmark with a proprietary sustainability score was	94.58%	97.4%	96.17%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation
describes the share of
investments in specific
assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	0.29 %

U99	ACTIVITIES OF EXTRATERRITORIAL ORGANISATIONS AND BODIES	0.44 %
Other	NOT SECTORIZED	0.88 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 37.8 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	4.31 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.10 %
Enabling activities	1.15 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	4.42 %	3.04 %	4.86 %
Capex	5.74 %	6.07 %	0 %
Opex	2.9 %	4.43 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	7.11 %	4.47 %	6.6 %
Capex	9.23 %	8.93 %	0 %
Opex	4.67 %	6.52 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 7.23% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 23.48% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these

investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz All China Equity

Legal entity identifier: 529900RSE3ISUYS6ZL79

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 38.52% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz All China Equity (the "Sub-Fund") promoted a broad range of environmental, social and governance characteristics ("ESG characteristics"). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed within the remaining investment universe how issuers performed with respect to ESG characteristics using ESG Ratings. ESG Ratings were provided from an external data provider. Based on this, the Investment Manager managed the Sub-Fund so that the performance with respect to ESG characteristics of the portfolio was better than the performance of the Sub-Fund's benchmark. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio ESG Ratings must be available.
- Further, the Investment Manager adhered to a minimum percentage of 5.00% of Sustainable Investments.

A reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio with a rating for issuer on ESG characteristics ("ESG Rating") was 88.68 %.

The ESG Rating is described within the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash, deposits and derivatives. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- The average ESG Rating of the portfolio was 5.3. The process to determine the average ESG Rating is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund
- The average ESG Rating of the benchmark was 5.3.

The binding elements except for one criterion were adhered to. The criterion which was not adhered to led to an investment limit violation.

- **... and compared to previous periods?**

On 02.06.2023, the sustainable investment approach was changed from the Climate Engagement with Outcome (CEWO) to another E/S Strategy (ESG Score Strategy). The indicators for measuring compliance with ecological and social characteristics between the investment approaches are only partially comparable. If the indicators for the CEWO are not comparable, they are not included in the table. For information on the performance of the strategy, please refer to the 2023 year-end report (available upon request).

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a rating for issuer on ESG characteristics ("ESG Rating") was	88.68%	95.09%	94.3%
The average ESG Rating of the portfolio was	5.3	4.9	4.6
The average ESG Rating of the benchmark was	5.3	4.6	4.2
The response rate (companies replied to the engagement questionnaire) was*	-	-	81%
Change of the carbon footprint**	-	-	2.6%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

* The top 10 carbon emitting issuers are determined periodically. Over the reference dates Q4/2020, Q1/2022 and Q1/2023 the 16 emitters were identified.

** Change of the CO2 emissions of the year 2019 compared to 2021.

All investments in sovereign issuers were evaluated with an SRI rating until the sustainable investment approach was changed.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
TENCENT HOLDINGS LTD	INFORMATION AND COMMUNICATION	9.48 %	People's Republic of China
ALIBABA GROUP HOLDING LIMITED	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	8.27 %	People's Republic of China
CHINA CONSTRUCTION BANK-H	FINANCIAL AND INSURANCE ACTIVITIES	4.55 %	People's Republic of China
XIAOMI CORP-CLASS B	MANUFACTURING	3.97 %	People's Republic of China
CHINA MERCHANTS BANK-H	FINANCIAL AND INSURANCE ACTIVITIES	2.84 %	People's Republic of China
MEITUAN-CLASS B	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	2.53 %	People's Republic of China

PING AN INSURANCE GROUP CO-H	FINANCIAL AND INSURANCE ACTIVITIES	1.49 %	People's Republic of China
BYD CO LTD-H	MANUFACTURING	1.43 %	People's Republic of China

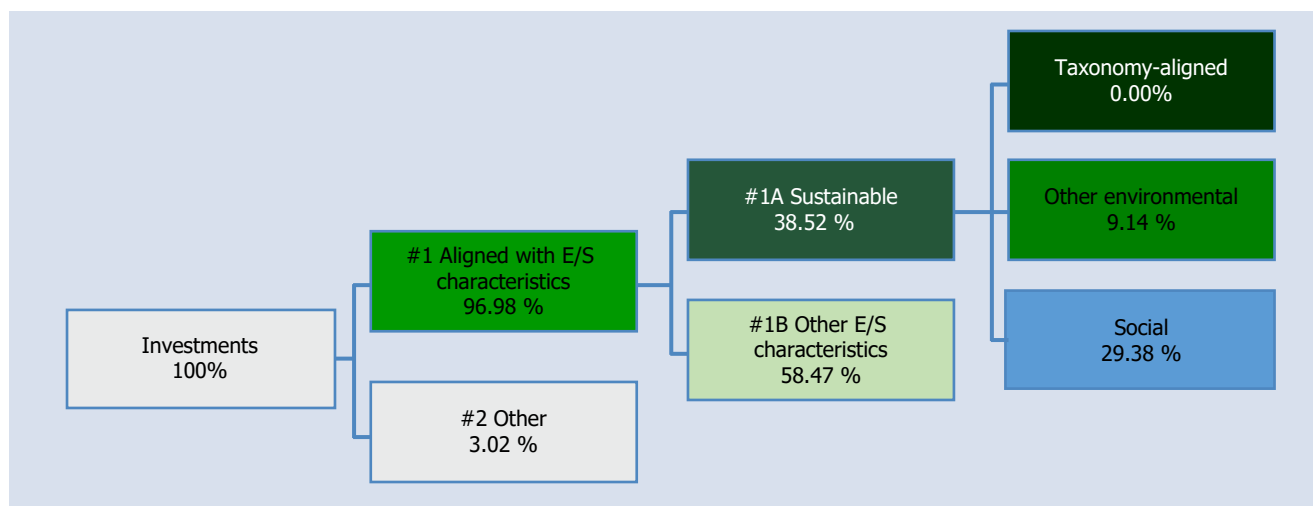

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	43.99 %
C11	Manufacture of beverages	3.05 %
C19	Manufacture of coke and refined petroleum products	1.08 %
C20	Manufacture of chemicals and chemical products	1.46 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	1.10 %
C23	Manufacture of other non-metallic mineral products	0.38 %
C24	Manufacture of basic metals	3.01 %
C26	Manufacture of computer, electronic and optical products	15.02 %
C27	Manufacture of electrical equipment	6.46 %
C28	Manufacture of machinery and equipment n.e.c.	7.40 %
C29	Manufacture of motor vehicles, trailers and semi-trailers	5.02 %
D	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	2.11 %
D35	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	2.11 %
F	CONSTRUCTION	1.32 %
F41	Construction of buildings	1.32 %
G	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	13.72 %
G47	Retail trade, except of motor vehicles and motorcycles	13.72 %
H	TRANSPORTATION AND STORAGE	0.27 %
H52	Warehousing and support activities for transportation	0.27 %
J	INFORMATION AND COMMUNICATION	12.78 %
J58	Publishing activities	2.56 %
J63	Information service activities	10.22 %
K	FINANCIAL AND INSURANCE ACTIVITIES	15.12 %
K64	Financial service activities, except insurance and pension funding	8.50 %
K65	Insurance, reinsurance and pension funding, except compulsory social security	3.12 %
K66	Activities auxiliary to financial services and insurance activities	3.50 %
M	PROFESSIONAL, SCIENTIFIC AND TECHNICAL ACTIVITIES	4.84 %
M72	Scientific research and development	4.84 %
N	ADMINISTRATIVE AND SUPPORT SERVICE ACTIVITIES	1.17 %
N79	Travel agency, tour operator and other reservation service and related activities	1.17 %
Other	NOT SECTORIZED	4.68 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	0 %	0 %	0.11 %
Capex	0 %	0 %	0 %
Opex	0 %	0 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	0 %	0 %	0.11 %
Capex	0 %	0 %	0 %
Opex	0 %	0 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 9.14% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 29.38% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI 's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Investment Manager has assigned the index "MSCI China All Shares Total Return Net" as the Sub-Fund's benchmark. This benchmark is a market index. The Investment Manager manages the Sub-Fund so that so that the Sub-Fund's performance with respect to ESG Ratings of the portfolio is better than the performance of the Sub-Fund's benchmark as described in the section "What investment strategy does this financial product follow?".

- **How did the reference benchmark differ from a broad market index?**

The Sub-Fund's benchmark is a market index.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The average ESG Rating of the portfolio was 5.3. The process to determine the average ESG Rating is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

The average ESG Rating of the benchmark was 5.3.

- **How did this financial product perform compared with the reference benchmark?**

01/10/2024 - 30/09/2025	Allianz All China Equity	Benchmark	Active Return
Performance %	35	25.27	9.73

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did this financial product perform compared with the broad market index?

01/10/2024 - 30/09/2025	Allianz All China Equity	Benchmark	Active Return
Performance %	35	25.27	9.73

Product name:

Allianz Asia Ex China Equity

Legal entity identifier: 529900OK2J7VW1LL7W91

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 51.51% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Asia ex China Equity (the "Sub-Fund") promoted environmental and social characteristics as well as the management of greenhouse gas ("GHG") intensity. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed investments (excluded cash and derivatives) according to the greenhouse gas ("GHG") emissions of investee companies as far as such data was available. Based on this, the Investment Manager managed the Sub-Fund in a way that the GHG intensity of the portfolio was 20.00% lower than the GHG intensity of the Sub-Fund's benchmark. GHG intensity was defined as GHG emissions (scope 1 and 2) per million USD sales of the issuer. GHG emissions per million USD sales was used, as this metrics allows to differentiate between more and less energy efficient issuers. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio GHG intensity data must be available.
- Further, the Investment Manager adhered to a minimum percentage of 10.00% of Sustainable Investments.

A reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 10% of their revenue from thermal coal extraction,

- active within the utility sector and generating more than 20% of their revenues from coal,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio which is covered by GHG intensity data was 80.23 %. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual GHG intensity of the Sub-Fund's portfolio was 69.28 % lower than the GHG intensity of the benchmark at the relevant financial year. The calculation of the GHG intensity is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
TAIWAN SEMICONDUCTOR MANUFAC	MANUFACTURING	8.55 %	Taiwan
SAMSUNG ELECTRONICS CO LTD	MANUFACTURING	5.12 %	South Korea
SK HYNIX INC	MANUFACTURING	2.80 %	South Korea
HDFC BANK LIMITED	FINANCIAL AND INSURANCE ACTIVITIES	2.72 %	India

TENCENT HOLDINGS LTD	INFORMATION AND COMMUNICATION	2.06 %	People's Republic of China
HANA FINANCIAL GROUP	FINANCIAL AND INSURANCE ACTIVITIES	2.06 %	South Korea
ELITE MATERIAL CO LTD	MANUFACTURING	1.97 %	Taiwan
SEA LTD-ADR	INFORMATION AND COMMUNICATION	1.92 %	Singapore
MOBILE WORLD INVESTMENT CORP	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	1.90 %	Vietnam
MAKEMYTRIP LTD	INFORMATION AND COMMUNICATION	1.80 %	India
SBI LIFE INSURANCE CO LTD	FINANCIAL AND INSURANCE ACTIVITIES	1.67 %	India
MEDIATEK INC	MANUFACTURING	1.62 %	Taiwan

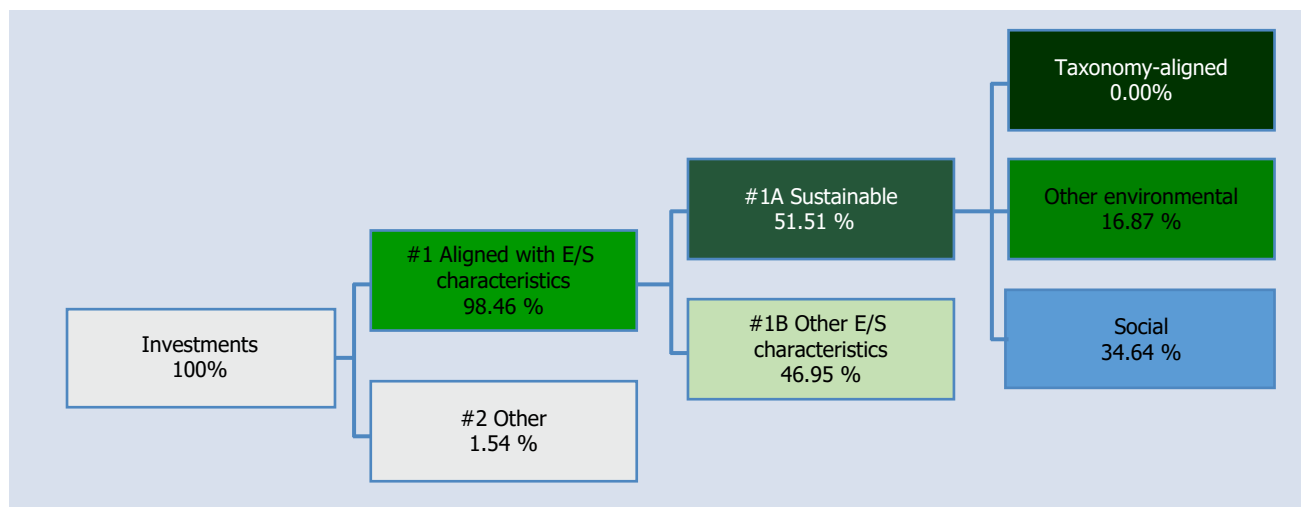

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	53.96 %
C11	Manufacture of beverages	0.44 %
C16	Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials	1.67 %
C17	Manufacture of paper and paper products	1.46 %
C19	Manufacture of coke and refined petroleum products	3.67 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	1.48 %
C22	Manufacture of rubber and plastic products	1.18 %
C24	Manufacture of basic metals	1.64 %
C26	Manufacture of computer, electronic and optical products	36.10 %
C27	Manufacture of electrical equipment	2.79 %
C28	Manufacture of machinery and equipment n.e.c.	2.33 %
C32	Other manufacturing	1.20 %
F	CONSTRUCTION	0.96 %
F42	Civil engineering	0.96 %
G	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	1.81 %
G47	Retail trade, except of motor vehicles and motorcycles	1.81 %
H	TRANSPORTATION AND STORAGE	2.04 %
H51	Air transport	2.04 %
J	INFORMATION AND COMMUNICATION	10.57 %

J63	Information service activities	5.57 %
K	FINANCIAL AND INSURANCE ACTIVITIES	17.81 %
K64	Financial service activities, except insurance and pension funding	10.62 %
K65	Insurance, reinsurance and pension funding, except compulsory social security	4.15 %
K66	Activities auxiliary to financial services and insurance activities	3.05 %
L	REAL ESTATE ACTIVITIES	1.53 %
L68	REAL ESTATE ACTIVITIES	1.53 %
N	ADMINISTRATIVE AND SUPPORT SERVICE ACTIVITIES	1.13 %
N79	Travel agency, tour operator and other reservation service and related activities	1.13 %
Q	HUMAN HEALTH AND SOCIAL WORK ACTIVITIES	1.78 %
Q86	Human health activities	1.78 %
Other	NOT SECTORIZED	8.40 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 16.87% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 34.64% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Investment Manager has assigned the index "MSCI Emerging Markets Asia ex China 10/40" as the Sub-Fund's benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by managing the GHG intensity so that it will be continuously 20% lower than the GHG intensity of the benchmark as described in the section "What investment strategy does this financial product follow?".

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did the reference benchmark differ from a broad market index?

The Sub-Fund's benchmark is a market index.

- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

The actual GHG intensity of the Sub-Fund's portfolio was 69.28 % lower than the GHG intensity of the benchmark at the relevant financial year end. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- How did this financial product perform compared with the reference benchmark?

01/10/2024 - 30/09/2025	Allianz Asia Ex China Equity	Benchmark	Active Return
Performance %	10.92	13.71	-2.79

- How did this financial product perform compared with the broad market index?

01/10/2024 - 30/09/2025	Allianz Asia Ex China Equity	Benchmark	Active Return
Performance %	10.92	13.71	-2.79

Product name:

Allianz Balanced Income and Growth

Legal entity identifier: 222100F0XLSU7WE8ME71

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 53.18% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Balanced Income and Growth (the "Sub-Fund") promoted a broad range of environmental and social characteristics. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe direct investments which were selected with respect to sustainability aspects and other funds ("Target Funds") which promote environmental or social characteristics, or which had Sustainable Investments as an objective for at least 70% of the Sub-Fund's assets. Target Funds were counted into the 70% if they disclose according to Art 8 Sustainable Finance Disclosure Regulation ("SFDR") or Art 9 SFDR. Direct investments were counted into the 70% if they were managed according to another approach of the Investment Manager qualifying as Art 8 or 9 SFDR).
- Further, the Investment Manager adhered to a minimum percentage of 10.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights, - developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),- deriving more than 10% of their revenue from thermal coal extraction,- active within the utility sector and generating more than 20% of their revenues from coal,- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco. Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded. Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.- The actual percentage of the Sub-Fund's assets invested in direct investments which are selected with respect to sustainability aspects and Target Funds which promote environmental or social characteristics, or which have Sustainable Investments as an objective at the end of the financial year was at least 70%. In case the Investment Manager decides to directly invest in Debt or Equity Securities which are selected with respect to sustainability aspects the adherence to the respective binding element will be reported.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. The exclusion criteria did not apply to Target Funds managed by another Investment Manager and for Target Funds managed by the Investment Manager, but which did not promote environmental or social characteristics or did not have Sustainable Investments as an objective. The Investment Manager would limit this part of the Sub-Fund assets to 30%, so that the exclusion criteria applied to the majority of the Sub-Funds assets. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogeneous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity

- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	1.79 %
B06	Extraction of crude petroleum and natural gas	1.38 %
B07	Mining of metal ores	0.41 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

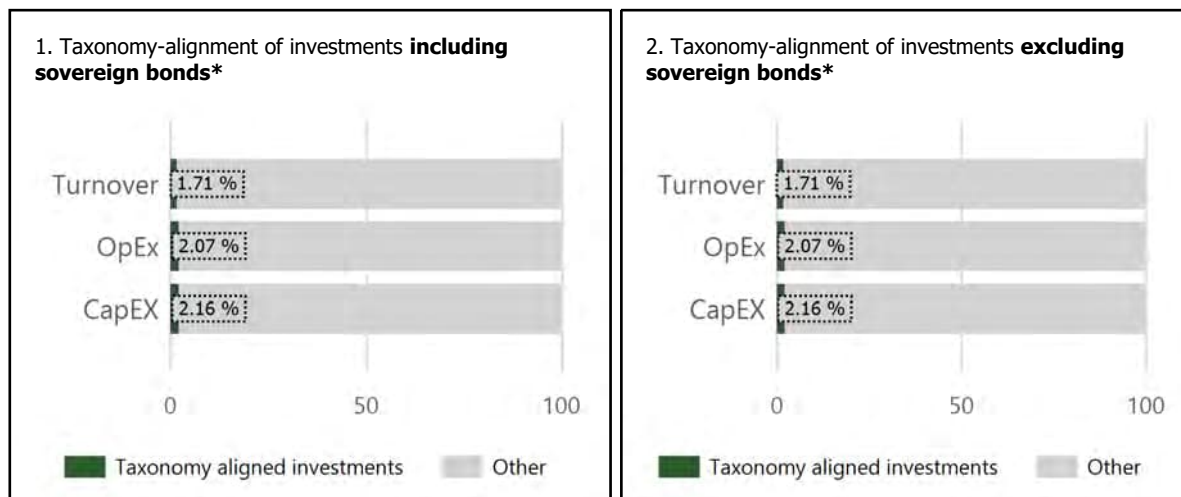

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	1.59 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.97 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 9.25% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 42.18% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager’s engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI’s strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI’s holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- [How did the reference benchmark differ from a broad market index?](#)

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks
are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Product name:

Allianz Best Styles Europe Equity SRI

Legal entity identifier: 529900CFHS19HK7S6O04

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 59.73% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Best Styles Europe Equity SRI (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step, the Investment Manager identifies those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at class 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- In a second step, excluded direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- Further, the Investment Manager adhered to a minimum percentage of 50.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- deriving more than 5% of their revenues from (i) weapons or (ii) military equipment and military services,
- deriving more than 1% of their revenues from exploration, mining, extraction, distribution or refining of thermal coal,
- active within the utility sector and generating more than 20% of their revenues from coal,
- deriving more than 50% of their revenues from electricity generation with a GHG intensity of more than 100 g CO₂ e/kWh,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco,
- deriving more than 5% of their revenues from the sum of (i) the production of and (ii) providing services in relation to hydraulic fracturing,
- deriving more than 10% of their revenues from the production of alcohol (limited to spirits),
- deriving more than 5% of their revenues from the production of agricultural genetically modified organisms ("GMOs"),
- deriving more than 10% of their revenues from the sum of (i) the production of and (ii) providing services in relation to nuclear power,
- involved in the production of arctic drilling,
- deriving more than 5% of their revenues from gambling,
- deriving more than 5% of their revenues from the (i) production or (ii) exploration of oil sands,
- deriving more than 10% of their revenues from the exploration, extraction, distribution or refining of oil fuels,
- deriving more than 50% of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels,
- deriving more than 5% of their revenues from the (i) production or (ii) distribution/sales of pornography.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The investment universe has been reduced by excluding at least 20.00% of the total number of potential issuers compared to the investible issuers according to the Sub-Fund's general investment strategy as described in the prospectus.

- The actual percentage of the portfolio with a proprietary sustainability score of 1 or more was 99.88 % at the financial year end. The actual percentage of the benchmark with a proprietary sustainability score was 100 %. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- ... and compared to previous periods?

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a proprietary sustainability score was	99.88%	98.2%	98.28%
The actual percentage of the benchmark with a proprietary sustainability score was	100%	98.74%	98.73%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	0.30 %
B09	Mining support service activities	0.30 %
C	MANUFACTURING	50.44 %
C10	Manufacture of food products	0.31 %
C11	Manufacture of beverages	4.09 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

- [Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?](#)

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	4.99 %
Climate change adaptation	0.02 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.63 %
Enabling activities	2.49 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	5.73 %	3.62 %	4.27 %
Capex	8.07 %	6.61 %	0 %
Opex	6.5 %	5.7 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	5.73 %	3.62 %	4.27 %
Capex	8.07 %	6.61 %	0 %
Opex	6.5 %	5.7 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 7.28% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 46.13% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these

investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Best Styles Global Equity SRI

Legal entity identifier: 5299009P57HYFZWC1553

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 61.77% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Best Styles Global Equity SRI (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step, the Investment Manager identifies those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at class 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- In a second step, excluded direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- Further, the Investment Manager adhered to a minimum percentage of 50.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- deriving more than 5% of their revenues from (i) weapons or (ii) military equipment and military services,
- deriving more than 1% of their revenues from exploration, mining, extraction, distribution or refining of thermal coal,
- active within the utility sector and generating more than 20% of their revenues from coal,
- deriving more than 50% of their revenues from electricity generation with a GHG intensity of more than 100 g CO₂ e/kWh,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco,
- deriving more than 5% of their revenues from the sum of (i) the production of and (ii) providing services in relation to hydraulic fracturing,
- deriving more than 10% of their revenues from the production of alcohol (limited to spirits),
- deriving more than 5% of their revenues from the production of agricultural genetically modified organisms ("GMOs"),
- deriving more than 10% of their revenues from the sum of (i) the production of and (ii) providing services in relation to nuclear power,
- involved in the production of arctic drilling,
- deriving more than 5% of their revenues from gambling,
- deriving more than 5% of their revenues from the (i) production or (ii) exploration of oil sands,
- deriving more than 10% of their revenues from the exploration, extraction, distribution or refining of oil fuels,
- deriving more than 50% of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels,
- deriving more than 5% of their revenues from the (i) production or (ii) distribution/sales of pornography.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The investment universe has been reduced by excluding at least 20.00% of the total number of potential issuers compared to the investible issuers according to the Sub-Fund's general investment strategy as described in the prospectus.

- The actual percentage of the portfolio with a proprietary sustainability score of 1 or more was 99.3 % at the financial year end. The actual percentage of the benchmark with a proprietary sustainability score was 99.92 %. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- ... and compared to previous periods?

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a proprietary sustainability score was	99.3%	99.15%	99.59%
The actual percentage of the benchmark with a proprietary sustainability score was	99.92%	97.11%	97.77%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	0.42 %
B07	Mining of metal ores	0.39 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

- [Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?](#)

Yes

In fossil gas

In nuclear energy

No

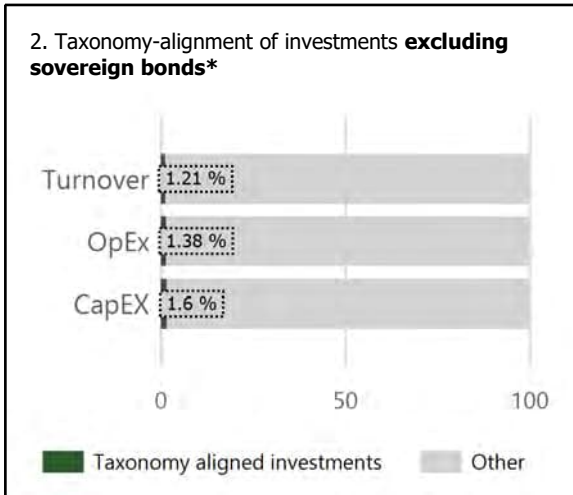

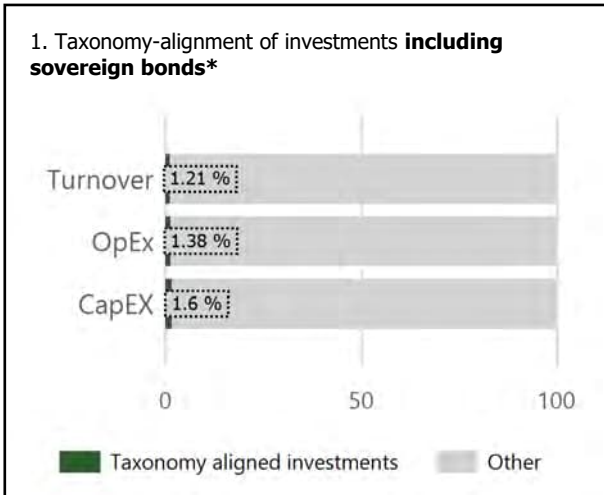

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.96 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.18 %
Enabling activities	0.35 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	1.21 %	1.06 %	1.28 %
Capex	1.6 %	2.23 %	0 %
Opex	1.38 %	1.53 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	1.21 %	1.06 %	1.28 %
Capex	1.6 %	2.23 %	0 %
Opex	1.38 %	1.53 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 13.89% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 46.67% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these

investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Best Styles US Equity

Legal entity identifier: 549300CRWWNBEVKIWU63

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 58.23% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Best Styles US Equity (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step, the Investment Manager identifies those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at class 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- In a second step, excluded direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- Further, the Investment Manager adhered to a minimum percentage of 15.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The investment universe has been reduced by excluding at least 20.00% of the total number of potential issuers compared to the investible issuers according to the Sub-Fund's general investment strategy as described in the prospectus.

- The actual percentage of the portfolio with a proprietary sustainability score of 1 or more was 99.77 % at the financial year end. The actual percentage of the benchmark with a proprietary sustainability score was 99.99 %. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a proprietary sustainability score was	99.77%	98.86%	99.46%
The actual percentage of the benchmark with a proprietary sustainability score was	99.99%	91.22%	90.53%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

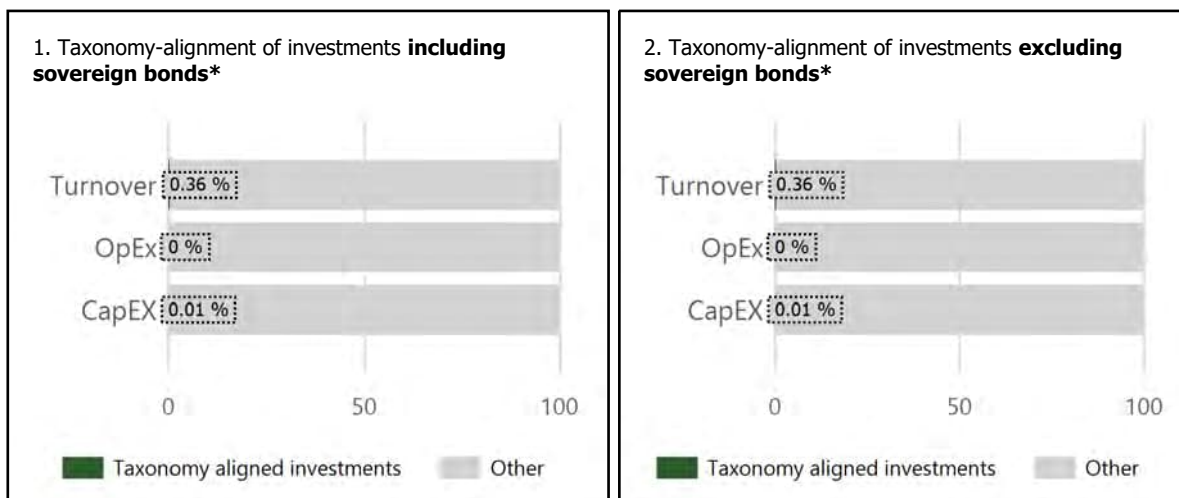

Yes

In fossil gas In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.35 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.15 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	0.36 %	0.55 %	0.28 %
Capex	0.01 %	0.12 %	0 %
Opex	0 %	0 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	0.36 %	0.55 %	0.28 %
Capex	0.01 %	0.12 %	0 %
Opex	0 %	0 %	0 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 15.83% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 42.04% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager’s engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI’s strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI’s holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks
are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Product name:

Allianz Best Styles US Small Cap Equity

Legal entity identifier: 5299008BUZ4793QZRD79

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 58.51% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Best Styles US Small Cap Equity (the "Sub-Fund") promoted environmental and social characteristics as well as the management of greenhouse gas ("GHG") intensity. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed investments (excluded cash and derivatives) according to the greenhouse gas ("GHG") emissions of investee companies as far as such data was available. Based on this, the Investment Manager managed the Sub-Fund in a way that the GHG intensity of the portfolio was 20.00% lower than the GHG intensity of the Sub-Fund's benchmark. GHG intensity was defined as GHG emissions (scope 1 and 2) per million USD sales of the issuer. GHG emissions per million USD sales was used, as this metrics allows to differentiate between more and less energy efficient issuers. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio GHG intensity data must be available.
- Further, the Investment Manager adhered to a minimum percentage of 10.00% of Sustainable Investments.

A reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund 's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 10% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.
- deriving more than 5% of their revenues from the (i) production or (ii) distribution/sales of pornography.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index[1] are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio which is covered by GHG intensity data was 98.99 %. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

-The actual GHG intensity of the Sub-Fund's portfolio was 67.96 % lower than the GHG intensity of the benchmark at the relevant financial year. The calculation of the GHG intensity is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 14/05/2025-30/09/2025

Largest investment	Sector	% Assets	Country
FLEX LTD	MANUFACTURING	1.84 %	USA

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

- [Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?](#)

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.02 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.02 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 9.1% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 49.21% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI 's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Investment Manager has assigned the index "MSCI USA Small Cap Total Return" as the Sub-Fund's benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by managing the GHG intensity so that it will be continuously 20% lower than the GHG intensity of the benchmark as described in the section "What investment strategy does this financial product follow?".

- **How did the reference benchmark differ from a broad market index?**

The Sub-Fund's benchmark is a market index.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The actual GHG intensity of the Sub-Fund's portfolio was 67.96 % lower than the GHG intensity of the benchmark at the relevant financial year end. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **How did this financial product perform compared with the reference benchmark?**

14/05/2025 - 30/09/2025	Allianz Best Styles US Small Cap Equity	Benchmark	Active Return
Performance %	10.28	13.28	-3

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did this financial product perform compared with the broad market index?

14/05/2025 - 30/09/2025	Allianz Best Styles US Small Cap Equity	Benchmark	Active Return
Performance %	10.28	13.28	-3

Product name:

Allianz Capital Plus

Legal entity identifier: 549300XT1DVY4H170178

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 40.23% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Capital Plus (the "Sub-Fund") promoted a broad range of environmental and social characteristics. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe direct investments which were selected with respect to sustainability aspects and other internal funds ("Target Funds") which promote environmental or social characteristics, or which had Sustainable Investments as an objective for at least 90% of the Sub-Fund's assets. Target Funds were counted into the 90% if they disclose according to Art 8 Sustainable Finance Disclosure Regulation ("SFDR") or Art 9 SFDR. Direct investments were counted into the 90% if they were managed according to another approach of the Investment Manager qualifying as Art 8 or 9 SFDR).
- Further, the Investment Manager adhered to a minimum percentage of 1.50% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the Sub-Fund's assets invested in direct investments which are selected with respect to sustainability aspects and Target Funds which promote environmental or social characteristics, or which have Sustainable Investments as an objective at the end of the financial year was 99.48 %. In case the Investment Manager decides to directly invest in Debt or Equity Securities which are selected with respect to sustainability aspects the adherence to the respective binding element will be reported.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the Sub-Fund's assets invested in direct investments which are selected with respect to sustainability aspects and Target Funds which promote environmental or social characteristics, or which have Sustainable Investments as an objective at the end of the financial year was	99.48 %	99.25 %	99.76 %
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. The exclusion criteria did not apply to Target Funds managed by another Investment Manager and for Target Funds managed by the Investment Manager, but which did not promote environmental or social characteristics or did not have Sustainable Investments as an objective. The Investment Manager would limit this part of the Sub-Fund assets to 30%, so that the exclusion criteria applied to the majority of the Sub-Funds assets. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogeneous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 32.27 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	3.55 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.14 %
Enabling activities	2.36 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	3.83 %	1.63 %	2.02 %
Capex	6.17 %	3.06 %	0.01 %
Opex	4.44 %	1.94 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	5.65 %	2.36 %	3.07 %
Capex	9.12 %	4.43 %	0.02 %
Opex	6.55 %	2.81 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 7.3% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 28.96% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager’s engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI’s strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI’s holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks

are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Product name:

Allianz Capital Plus Global

Legal entity identifier: 529900V4Z0XTX71VJR91

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 30.41% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Capital Plus Global (the "Sub-Fund") promoted a broad range of environmental and social characteristics. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe direct investments which were selected with respect to sustainability aspects and other internal funds ("Target Funds") which promote environmental or social characteristics, or which had Sustainable Investments as an objective for at least 90% of the Sub-Fund's assets. Target Funds were counted into the 90% if they disclose according to Art 8 Sustainable Finance Disclosure Regulation ("SFDR") or Art 9 SFDR. Direct investments were counted into the 90% if they were managed according to another approach of the Investment Manager qualifying as Art 8 or 9 SFDR).
- Further, the Investment Manager adhered to a minimum percentage of 1.50% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the Sub-Fund's assets invested in direct investments which are selected with respect to sustainability aspects and Target Funds which promote environmental or social characteristics, or which have Sustainable Investments as an objective at the end of the financial year was 98.79 %. In case the Investment Manager decides to directly invest in Debt or Equity Securities which are selected with respect to sustainability aspects the adherence to the respective binding element will be reported.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the Sub-Fund's assets invested in direct investments which are selected with respect to sustainability aspects and Target Funds which promote environmental or social characteristics, or which have Sustainable Investments as an objective at the end of the financial year was	98.79 %	97.81 %	98.7 %
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. The exclusion criteria did not apply to Target Funds managed by another Investment Manager and for Target Funds managed by the Investment Manager, but which did not promote environmental or social characteristics or did not have Sustainable Investments as an objective. The Investment Manager would limit this part of the Sub-Fund assets to 30%, so that the exclusion criteria applied to the majority of the Sub-Funds assets. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogeneous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
A	AGRICULTURE, FORESTRY AND FISHING	0.02 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 39.84 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	1.88 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.20 %
Enabling activities	0.68 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	1.91 %	0.45 %	0.98 %
Capex	2.77 %	0.89 %	0 %
Opex	2.08 %	0.7 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	3.18 %	0.81 %	1.87 %
Capex	4.61 %	1.61 %	0 %
Opex	3.46 %	1.27 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 5.92% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 22.49% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz China A Opportunities

Legal entity identifier: 529900SR5WUFEB6J7646

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 42.78% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz China A Opportunities (the "Sub-Fund") promoted a broad range of environmental, social and governance characteristics ("ESG characteristics"). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed within the remaining investment universe how issuers performed with respect to ESG characteristics using ESG Ratings. ESG Ratings were provided from an external data provider. Based on this, the Investment Manager managed the Sub-Fund so that the performance with respect to ESG characteristics of the portfolio was better than the performance of the Sub-Fund's benchmark. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio ESG Ratings must be available.
- Further, the Investment Manager adhered to a minimum percentage of 5.00% of Sustainable Investments.

A reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio with a rating for issuer on ESG characteristics ("ESG Rating") was 87.88 %.

The ESG Rating is described within the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash, deposits and derivatives. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- The average ESG Rating of the portfolio was 5.2. The process to determine the average ESG Rating is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund
- The average ESG Rating of the benchmark was 4.7.

- **... and compared to previous periods?**

On 02.06.2023, the sustainable investment approach was changed from the Climate Engagement with Outcome (CEWO) to another E/S Strategy (ESG Score Strategy). The indicators for measuring compliance with ecological and social characteristics between the investment approaches are only partially comparable. If the indicators for the CEWO are not comparable, they are not included in the table. For information on the performance of the strategy, please refer to the 2023 year-end report (available upon request).

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a rating for issuer on ESG characteristics ("ESG Rating") was	87.88%	90.3%	90.37%
The average ESG Rating of the portfolio was	5.2	4.6	3.9
The average ESG Rating of the benchmark was	4.7	3.9	3.2
The response rate (companies replied to the engagement questionnaire) was*	-	-	79%
Change of the carbon footprint**	-	-	22.6%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

* The top 10 carbon emitting issuers are determined periodically. Over the reference dates Q4/2020, Q1/2022 and Q1/2023 the 19 emitters were identified.

** Change of the CO2 emissions of the year 2019 compared to 2021

All investments in sovereign issuers were evaluated with an SRI rating until the sustainable investment approach was changed.

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
KWEICHOW MOUTAI CO LTD-A	MANUFACTURING	5.63 %	People's Republic of China
CHINA MERCHANTS BANK-A	FINANCIAL AND INSURANCE ACTIVITIES	5.27 %	People's Republic of China
CONTEMPORARY AMPEREX TECHN-A	MANUFACTURING	4.97 %	People's Republic of China

SIEYUAN ELECTRIC CO LTD-A	MANUFACTURING	2.02 %	People's Republic of China
MONTAGE TECHNOLOGY CO LTD-A	MANUFACTURING	1.92 %	People's Republic of China

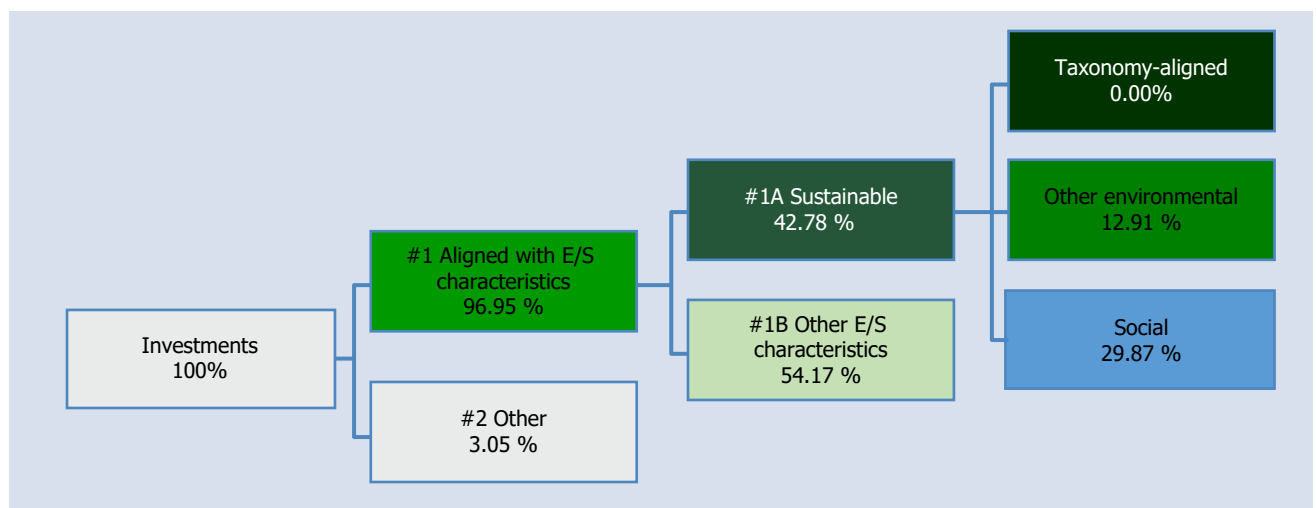

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	66.14 %
C10	Manufacture of food products	1.73 %
C11	Manufacture of beverages	5.36 %
C19	Manufacture of coke and refined petroleum products	1.22 %
C20	Manufacture of chemicals and chemical products	3.09 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.69 %
C23	Manufacture of other non-metallic mineral products	1.57 %
C24	Manufacture of basic metals	4.67 %
C26	Manufacture of computer, electronic and optical products	17.79 %
C27	Manufacture of electrical equipment	11.08 %
C28	Manufacture of machinery and equipment n.e.c.	11.08 %
C29	Manufacture of motor vehicles, trailers and semi-trailers	5.86 %
D	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	4.07 %
D35	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	4.07 %
F	CONSTRUCTION	0.87 %
F41	Construction of buildings	0.87 %
G	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	1.49 %
G47	Retail trade, except of motor vehicles and motorcycles	1.49 %
J	INFORMATION AND COMMUNICATION	2.10 %
J58	Publishing activities	2.10 %
K	FINANCIAL AND INSURANCE ACTIVITIES	18.65 %
K64	Financial service activities, except insurance and pension funding	8.65 %
K65	Insurance, reinsurance and pension funding, except compulsory social security	3.22 %
K66	Activities auxiliary to financial services and insurance activities	6.78 %
M	PROFESSIONAL, SCIENTIFIC AND TECHNICAL ACTIVITIES	2.68 %
M72	Scientific research and development	2.68 %
Other	NOT SECTORIZED	3.99 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	0 %	0 %	0.95 %
Capex	0 %	0 %	0 %
Opex	0 %	0 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	0 %	0 %	0.95 %
Capex	0 %	0 %	0 %
Opex	0 %	0 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 12.91% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 29.87% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Investment Manager has assigned the index "MSCI China A Total Return Net" as the Sub-Fund's benchmark. This benchmark is a market index. The Investment Manager manages the Sub-Fund so that so that the Sub-Fund's performance with respect to ESG Ratings of the portfolio is better than the performance of the Sub-Fund's benchmark as described in the section "What investment strategy does this financial product follow?".

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did the reference benchmark differ from a broad market index?

The Sub-Fund's benchmark is a market index.

- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

The average ESG Rating of the portfolio was 5.2. The process to determine the average ESG Rating is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

The average ESG Rating of the benchmark was 4.7.

- How did this financial product perform compared with the reference benchmark?

01/10/2024 - 30/09/2025	Allianz China A Opportunities	Benchmark	Active Return
Performance %	27.62	15.39	12.23

- How did this financial product perform compared with the broad market index?

01/10/2024 - 30/09/2025	Allianz China A Opportunities	Benchmark	Active Return
Performance %	27.62	15.39	12.23

Product name:

Allianz China A-Shares

Legal entity identifier: 529900CTGGXS3008Y005

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 43.89% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz China A-Shares (the "Sub-Fund") promoted a broad range of environmental, social and governance characteristics ("ESG characteristics"). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed within the remaining investment universe how issuers performed with respect to ESG characteristics using ESG Ratings. ESG Ratings were provided from an external data provider. Based on this, the Investment Manager managed the Sub-Fund so that the performance with respect to ESG characteristics of the portfolio was better than the performance of the Sub-Fund's benchmark. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio ESG Ratings must be available.
- Further, the Investment Manager adhered to a minimum percentage of 5.00% of Sustainable Investments.

A reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio with a rating for issuer on ESG characteristics ("ESG Rating") was 86.48 %.

The ESG Rating is described within the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash, deposits and derivatives. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- The average ESG Rating of the portfolio was 5.3. The process to determine the average ESG Rating is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund
- The average ESG Rating of the benchmark was 4.8.

- **... and compared to previous periods?**

On 02.06.2023, the sustainable investment approach was changed from the Climate Engagement with Outcome (CEWO) to another E/S Strategy (ESG Score Strategy). The indicators for measuring compliance with ecological and social characteristics between the investment approaches are only partially comparable. If the indicators for the CEWO are not comparable, they are not included in the table. For information on the performance of the strategy, please refer to the 2023 year-end report (available upon request).

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a rating for issuer on ESG characteristics ("ESG Rating") was	86.48%	88.96%	89.72%
The average ESG Rating of the portfolio was	5.3	4.6	3.9
The average ESG Rating of the benchmark was	4.8	3.9	3.2
The response rate (companies replied to the engagement questionnaire) was*	-	-	83%
Change of the carbon footprint**	-	-	32.7%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

* The top 10 carbon emitting issuers are determined periodically. Over the reference dates Q4/2020, Q1/2022 and Q1/2023 the 18 emitters were identified.

** Change of the CO2 emissions of the year 2019 compared to 2021.

All investments in sovereign issuers were evaluated with an SRI rating until the sustainable investment approach was changed.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
CHINA MERCHANTS BANK-A	FINANCIAL AND INSURANCE ACTIVITIES	5.15 %	People's Republic of China

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
A	AGRICULTURE, FORESTRY AND FISHING	0.44 %
A01	Crop and animal production, hunting and related service activities	0.44 %
C	MANUFACTURING	66.53 %
C10	Manufacture of food products	1.65 %
C11	Manufacture of beverages	4.27 %
C19	Manufacture of coke and refined petroleum products	0.98 %
C20	Manufacture of chemicals and chemical products	2.92 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.77 %
C23	Manufacture of other non-metallic mineral products	1.44 %
C24	Manufacture of basic metals	4.88 %
C26	Manufacture of computer, electronic and optical products	17.19 %
C27	Manufacture of electrical equipment	11.25 %
C28	Manufacture of machinery and equipment n.e.c.	13.68 %
C29	Manufacture of motor vehicles, trailers and semi-trailers	5.48 %
D	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	3.09 %
D35	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	3.09 %
F	CONSTRUCTION	0.86 %
F41	Construction of buildings	0.86 %
G	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	1.23 %
G47	Retail trade, except of motor vehicles and motorcycles	1.23 %
J	INFORMATION AND COMMUNICATION	1.63 %

J62	Computer programming, consultancy and related activities	0.33 %
K	FINANCIAL AND INSURANCE ACTIVITIES	18.31 %
K64	Financial service activities, except insurance and pension funding	7.13 %
K65	Insurance, reinsurance and pension funding, except compulsory social security	4.04 %
K66	Activities auxiliary to financial services and insurance activities	7.14 %
M	PROFESSIONAL, SCIENTIFIC AND TECHNICAL ACTIVITIES	4.32 %
M72	Scientific research and development	3.86 %
M73	Advertising and market research	0.45 %
Other	NOT SECTORIZED	3.60 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	0 %	0 %	1.06 %
Capex	0 %	0 %	0 %
Opex	0 %	0 %	0 %

Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	0 %	0 %	1.06 %
Capex	0 %	0 %	0 %
Opex	0 %	0 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 13.63% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 30.26% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI 's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Investment Manager has assigned the index "MSCI China A Onshore Total Return Net" as the Sub-Fund's benchmark. This benchmark is a market index. The Investment Manager manages the Sub-Fund so that the Sub-Fund's performance with respect to ESG Ratings of the portfolio is better than the performance of the Sub-Fund's benchmark as described in the section "What investment strategy does this financial product follow?".

- **How did the reference benchmark differ from a broad market index?**

The Sub-Fund's benchmark is a market index.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The average ESG Rating of the portfolio was 5.3. The process to determine the average ESG Rating is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

The average ESG Rating of the benchmark was 4.8.

- **How did this financial product perform compared with the reference benchmark?**

01/10/2024 - 30/09/2025	Allianz China A-Shares	Benchmark	Active Return
Performance %	26.69	20.64	6.05

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did this financial product perform compared with the broad market index?

01/10/2024 - 30/09/2025	Allianz China A-Shares	Benchmark	Active Return
Performance %	26.69	20.64	6.05

Product name:

Allianz China Equity

Legal entity identifier: 549300HFT1TW3OAGQ113

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 37.62% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz China Equity (the "Sub-Fund") promoted a broad range of environmental, social and governance characteristics ("ESG characteristics"). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed within the remaining investment universe how issuers performed with respect to ESG characteristics using ESG Ratings. ESG Ratings were provided from an external data provider. Based on this, the Investment Manager managed the Sub-Fund so that the performance with respect to ESG characteristics of the portfolio was better than the performance of the Sub-Fund's benchmark. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio ESG Ratings must be available.
- Further, the Investment Manager adhered to a minimum percentage of 2.00% of Sustainable Investments.

A reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio with a rating for issuer on ESG characteristics ("ESG Rating") was 90.41 %.

The ESG Rating is described within the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash, deposits and derivatives. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- The average ESG Rating of the portfolio was 5.9. The process to determine the average ESG Rating is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund
- The average ESG Rating of the benchmark was 5.8.

- **... and compared to previous periods?**

On 02.06.2023, the sustainable investment approach was changed from the Climate Engagement with Outcome (CEWO) to another E/S Strategy (ESG Score Strategy). The indicators for measuring compliance with ecological and social characteristics between the investment approaches are only partially comparable. If the indicators for the CEWO are not comparable, they are not included in the table. For information on the performance of the strategy, please refer to the 2023 year-end report (available upon request).

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a rating for issuer on ESG characteristics ("ESG Rating") was	90.41%	99.67%	95.38%
The average ESG Rating of the portfolio was	5.9	5.3	5.1
The average ESG Rating of the benchmark was	5.8	5.1	4.9
The response rate (companies replied to the engagement questionnaire) was*	-	-	75%
Change of the carbon footprint**	-	-	7.9%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

* The top 10 carbon emitting issuers are determined periodically. Over the reference dates Q4/2020, Q1/2022 and Q1/2023 the 20 emitters were identified.

** Change of the CO2 emissions of the year 2019 compared to 2021.

All investments in sovereign issuers were evaluated with an SRI rating until the sustainable investment approach was changed.

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
TENCENT HOLDINGS LTD	INFORMATION AND COMMUNICATION	9.36 %	People's Republic of China
ALIBABA GROUP HOLDING LIMITED	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	9.19 %	People's Republic of China
XIAOMI CORP-CLASS B	MANUFACTURING	5.57 %	People's Republic of China
CHINA CONSTRUCTION BANK-H	FINANCIAL AND INSURANCE ACTIVITIES	4.99 %	People's Republic of China
MEITUAN-CLASS B	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	4.13 %	People's Republic of China
CHINA MERCHANTS BANK-H	FINANCIAL AND INSURANCE ACTIVITIES	4.02 %	People's Republic of China
PING AN INSURANCE GROUP CO-H	FINANCIAL AND INSURANCE ACTIVITIES	3.29 %	People's Republic of China
PDD HOLDINGS INC	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	3.03 %	People's Republic of China
IND & COMM BK OF CHINA-H	FINANCIAL AND INSURANCE ACTIVITIES	2.54 %	People's Republic of China
BYD CO LTD-H	MANUFACTURING	2.42 %	People's Republic of China
NETEASE INC	INFORMATION AND COMMUNICATION	2.26 %	People's Republic of China

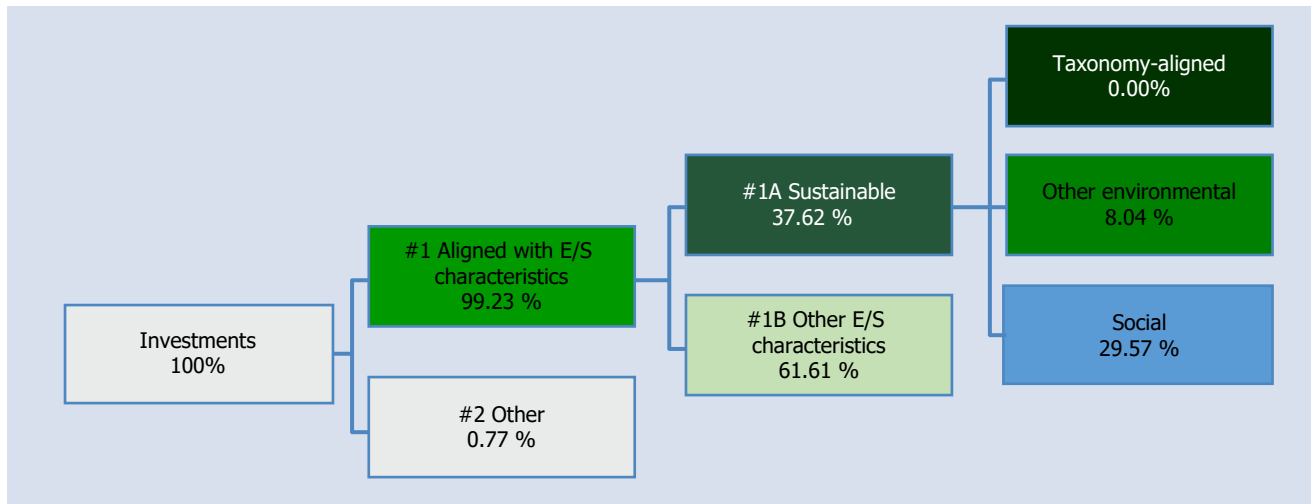

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	33.98 %
C11	Manufacture of beverages	1.07 %
C14	Manufacture of wearing apparel	0.29 %
C19	Manufacture of coke and refined petroleum products	1.30 %
C20	Manufacture of chemicals and chemical products	1.20 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	1.25 %
C23	Manufacture of other non-metallic mineral products	0.62 %
C24	Manufacture of basic metals	2.87 %
C26	Manufacture of computer, electronic and optical products	12.62 %
C27	Manufacture of electrical equipment	4.17 %
C28	Manufacture of machinery and equipment n.e.c.	3.93 %
C29	Manufacture of motor vehicles, trailers and semi-trailers	4.03 %
C32	Other manufacturing	0.64 %
F	CONSTRUCTION	3.61 %
F41	Construction of buildings	2.39 %
F42	Civil engineering	1.22 %
G	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	19.94 %
G45	Wholesale and retail trade and repair of motor vehicles and motorcycles	1.01 %
G46	Wholesale trade, except of motor vehicles and motorcycles	0.56 %
G47	Retail trade, except of motor vehicles and motorcycles	18.37 %
H	TRANSPORTATION AND STORAGE	0.53 %
H52	Warehousing and support activities for transportation	0.53 %
J	INFORMATION AND COMMUNICATION	15.02 %
J58	Publishing activities	3.72 %

K	FINANCIAL AND INSURANCE ACTIVITIES	15.38 %
K64	Financial service activities, except insurance and pension funding	9.55 %
K65	Insurance, reinsurance and pension funding, except compulsory social security	3.54 %
K66	Activities auxiliary to financial services and insurance activities	2.29 %
M	PROFESSIONAL, SCIENTIFIC AND TECHNICAL ACTIVITIES	7.28 %
M72	Scientific research and development	5.68 %
M73	Advertising and market research	1.60 %
N	ADMINISTRATIVE AND SUPPORT SERVICE ACTIVITIES	1.85 %
N79	Travel agency, tour operator and other reservation service and related activities	1.85 %
Other	NOT SECTORIZED	2.41 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	0 %	2.14 %	1.17 %
Capex	0 %	0.07 %	0 %
Opex	0 %	0 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	0 %	2.14 %	1.17 %
Capex	0 %	0.07 %	0 %
Opex	0 %	0 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 8.04% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 29.57% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI 's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Investment Manager has assigned the index "MSCI China 10/40 Total Return Net" as the Sub-Fund's benchmark. This benchmark is a market index. The Investment Manager manages the Sub-Fund so that so that the Sub-Fund's performance with respect to ESG Ratings of the portfolio is better than the performance of the Sub-Fund's benchmark as described in the section "What investment strategy does this financial product follow?".

- **How did the reference benchmark differ from a broad market index?**

The Sub-Fund's benchmark is a market index.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The average ESG Rating of the portfolio was 5.9. The process to determine the average ESG Rating is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

The average ESG Rating of the benchmark was 5.8.

- **How did this financial product perform compared with the reference benchmark?**

01/10/2024 - 30/09/2025	Allianz China Equity	Benchmark	Active Return
Performance %	31.02	28.18	2.84

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did this financial product perform compared with the broad market index?

01/10/2024 - 30/09/2025	Allianz China Equity	Benchmark	Active Return
Performance %	31.02	28.18	2.84

Product name:

Allianz Clean Planet

Legal entity identifier: 5299003YJB0A9U404D87

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 77.6% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Clean Planet (the "Sub-Fund") promoted environmental and social characteristics and one or more of the United Nations Sustainable Development Goals ("SDGs") or other Sustainable Investment objectives. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe mainly those issuers providing products or services suitable to facilitate positive environmental and social contributions. Environmental or social contributions include a broad range of topics, for which the Investment Manager used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the EU Taxonomy objectives. The proprietary methodology to assess the environmental and social contribution was described in the section "What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?" and contained an assessment of the positive contribution to environmental and social contributions as well as an assessment to avoid significant harm to any environmental or social objective.
- Further, the Investment Manager adhered to a minimum percentage of 50.00% of Sustainable Investments.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the sustainable investment objective the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 1% of their revenues from exploration, mining, extraction, distribution or refining of thermal coal,
- active within the utility sector and generating more than 20% of their revenues from coal,
- deriving more than 10% of their revenues from the exploration, extraction, distribution or refining of oil fuels,
- deriving more than 50% of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels,
- deriving more than 50% of their revenues from electricity generation with a GHG intensity of more than 100 g CO₂ e/kWh,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual Sustainable Investment share at the end of the financial year was 77.6 %.

At least 70% of the Sub-Fund's net asset value has been invested throughout the SubFund's financial year in issuers that pursue business activities that contribute to one or more of the following SDGs: Zero Hunger; Good Health and Well-being; Clean Water and Sanitation; Affordable and Clean Energy; Industry, Innovation and Infrastructure; Sustainable Cities and Communities; Responsible Consumption and Production; Climate Action; Life below Water; Life on Land.

- ... and compared to previous periods?

Indicator	09.2025	09.2024	09.2023
The actual Sustainable Investment share at the end of the financial year was	77.6 %	72.19 %	74.05 %
Confirmation on SDG aligned investments	At least 70% of the Sub-Fund's net asset value has been invested throughout the SubFund's financial year in issuers that pursue business activities that contribute to one or more of the following SDGs: Zero Hunger; Good Health and Well-being; Clean Water and Sanitation; Affordable and Clean Energy; Industry, Innovation and Infrastructure; Sustainable Cities and Communities; Responsible Consumption and Production; Climate Action; Life below Water; Life on Land.		
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Share of non-renewable energy consumption and production
- Activities negatively affecting biodiversity-sensitive areas
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Unadjusted gender pay gap
- Board gender diversity

- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- GHG intensity
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
ECOLAB INC	CONSTRUCTION	3.60 %	USA
XYLEM INC	MANUFACTURING	3.47 %	USA
TRANE TECHNOLOGIES PLC	MANUFACTURING	3.43 %	USA
WASTE MANAGEMENT INC	WATER SUPPLY; SEWERAGE, WASTE MANAGEMENT AND REMEDIATION ACTIVITIES	3.33 %	USA
THERMO FISHER SCIENTIFIC INC	MANUFACTURING	3.22 %	USA
NEXTERA ENERGY INC	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	3.18 %	USA
AIR LIQUIDE SA	MANUFACTURING	3.00 %	France
TAIWAN SEMICONDUCTOR-SP ADR	MANUFACTURING	2.79 %	Taiwan
DANAHER CORP	MANUFACTURING	2.53 %	USA
STANTEC INC	PROFESSIONAL, SCIENTIFIC AND TECHNICAL ACTIVITIES	2.51 %	Canada
TETRA TECH INC	PROFESSIONAL, SCIENTIFIC AND TECHNICAL ACTIVITIES	2.29 %	USA
IBERDROLA SA	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	2.28 %	Spain
SCHNEIDER ELECTRIC SE	MANUFACTURING	2.22 %	USA
FIRST SOLAR INC	MANUFACTURING	2.21 %	USA
REPUBLIC SERVICES INC	WATER SUPPLY; SEWERAGE, WASTE MANAGEMENT AND REMEDIATION ACTIVITIES	1.90 %	USA

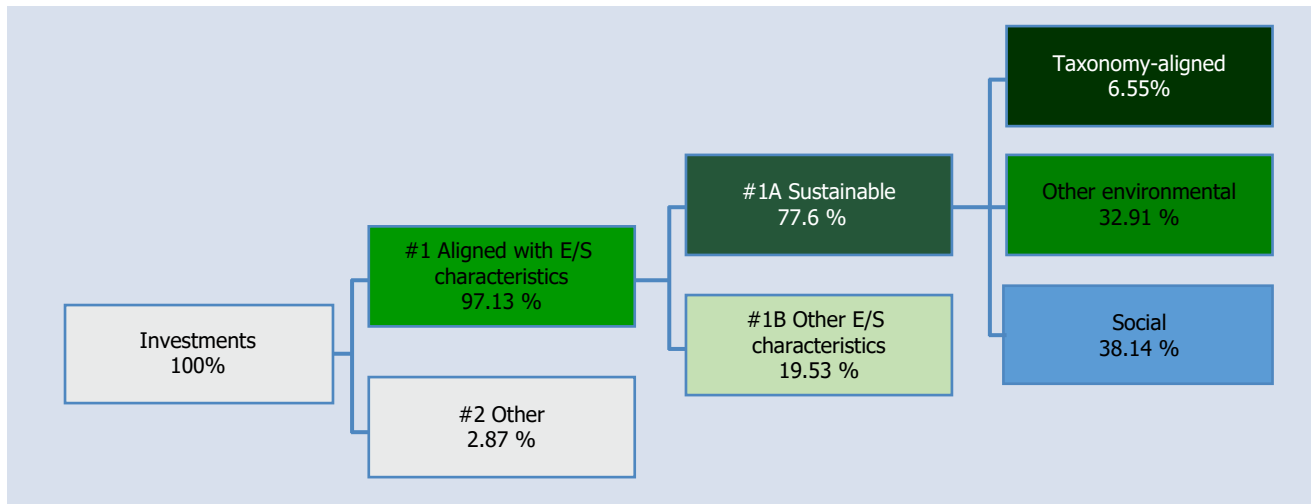

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	61.10 %
C16	Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials	1.60 %
C17	Manufacture of paper and paper products	0.61 %
C20	Manufacture of chemicals and chemical products	5.22 %
C22	Manufacture of rubber and plastic products	2.23 %
C23	Manufacture of other non-metallic mineral products	1.37 %
C25	Manufacture of fabricated metal products, except machinery and equipment	3.14 %
C26	Manufacture of computer, electronic and optical products	23.64 %
C27	Manufacture of electrical equipment	7.94 %
C28	Manufacture of machinery and equipment n.e.c.	14.32 %
C30	Manufacture of other transport equipment	1.04 %
D	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	7.84 %
D35	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	7.84 %
E	WATER SUPPLY; SEWERAGE, WASTE MANAGEMENT AND REMEDIATION ACTIVITIES	8.07 %
E36	Water collection, treatment and supply	2.35 %
E37	Sewerage	1.51 %
E38	Waste collection, treatment and disposal activities; materials recovery	4.21 %
F	CONSTRUCTION	6.37 %
F42	Civil engineering	6.37 %
G	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	1.76 %
G46	Wholesale trade, except of motor vehicles and motorcycles	1.76 %
J	INFORMATION AND COMMUNICATION	7.05 %
J58	Publishing activities	3.95 %
J62	Computer programming, consultancy and related activities	3.10 %
M	PROFESSIONAL, SCIENTIFIC AND TECHNICAL ACTIVITIES	4.35 %
M71	Architectural and engineering activities; technical testing and analysis	4.35 %
N	ADMINISTRATIVE AND SUPPORT SERVICE ACTIVITIES	0.59 %
N77	Rental and leasing activities	0.59 %
Other	NOT SECTORIZED	2.87 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	5.42 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.12 %
Enabling activities	3.23 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	6.55 %	9.65 %	15.42 %
Capex	6.58 %	8.34 %	0 %
Opex	7.2 %	5.84 %	0 %

Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	6.55 %	9.65 %	15.42 %
Capex	6.58 %	8.34 %	0 %
Opex	7.2 %	5.84 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 32.91% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 38.14% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Climate Transition Credit

Legal entity identifier: 529900QSKNARO960RK57

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 61.12% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Climate Transition Credit (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity) and invests a minimum percentage, which was increasing over time, in issuers which had set the ambition and taken actions to reach the Paris Agreement's goal[1]. The goal of the Paris Agreement is to keep global temperature well below 2° Celsius. This requires a fixed greenhouse gas ("GHG") emission budget and GHG emissions to reach net zero, meaning that residual emissions would need to be balanced by carbon removals by around 2050 ("Net Zero"). The Investment Manager had developed a methodology to assess issuers' commitments, targets and ability to transition to meet Net Zero objective. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- In a third step, the Investment Manager assessed issuers on multiple criteria such as 2050 ambition, emission reduction target, emissions performance relative to targets, emissions disclosure, transition

plan, or capital allocation alignment. Issuers from high impact sectors had stricter fulfillment requirements than low impact sectors of the same bucket. Each issuer was then classified in one of the transition categories: (1) achieving Net Zero, (2) aligned to Net Zero, (3) aligning to Net Zero, (4) committed to Net Zero and (5) not aligned to Net Zero. Investments (excluded cash and derivatives) from issuers classified in (1) achieving Net Zero, (2) aligned to Net Zero, and (3) aligning to Net Zero were considered in the Net Zero Alignment Share before October 1, 2030. Based on this, the Investment Manager managed the Sub-Fund so that min. 30% of the portfolio was invested in investments contributing to the Net Zero Alignment Share. From October 1, 2030 on, Investments (excluded cash and derivatives) from issuers classified in (1) achieving Net Zero and (2) aligned to Net Zero were considered in the Net Zero Alignment Share and the Net Zero alignment share of the Sub-Fund's portfolio needs to be at 50% or above.

- Further, the Investment Manager adhered to a minimum percentage of 20.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

[1]<https://www.un.org/en/climatechange/paris-agreement>

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 10% of their revenue from thermal coal extraction,

- active within the utility sector and generating more than 20% of their revenues from coal,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The Investment Manager invested with regard to scored issuers only in issuers with an internal score of 1 or more. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- The actual Net Zero Alignment Share of the portfolio at the financial year was 45.1 %. The percentage the share of the Sub-Fund's portfolio invested in issuers allocated to categories (1) to (3) before October 01, 2030 and percentage of the Sub-Fund's portfolio invested in issuers allocated to categories (1) and (2) from October 01, 2030 on. The calculation is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document in the pre-contractual document of the Sub-Fund.

- The actual percentage of the portfolio in issuers which have been assessed and been allocated into categories (1) to (5) at the end of the financial year was 90.1 %. The calculation is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document in the pre-contractual document of the Sub-Fund.

- ... and compared to previous periods?

Indicator	09.2025	09.2024	09.2023
The actual Net Zero Alignment Share of the portfolio at the financial year was	45.1%	-	-
The actual percentage of the portfolio in issuers which have been assessed and been allocated into categories (1) to (5) at the end of the financial year was	90.1%	-	-
The actual percentage of the Sub-Fund's assets invested in green transition related assets was	-	96.05%	72.68%
Confirmation that the binding element with a proprietary sustainability score of 1 or more for scored issuers has been adhered to throughout the financial year	The Investment Manager invested with regard to scored issuers only in issuers with an internal score of 1 or more.		
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
NETHERLANDS GOVERNMENT FIX 2.500% 15.01.2030	Administration of the State and the economic and social policy of the community (O84.1)	1.83 %	Netherlands

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	21.19 %
C10	Manufacture of food products	1.04 %
C11	Manufacture of beverages	4.62 %
C17	Manufacture of paper and paper products	0.68 %
C20	Manufacture of chemicals and chemical products	4.09 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	3.19 %

C23	Manufacture of other non-metallic mineral products	0.75 %
C26	Manufacture of computer, electronic and optical products	2.89 %
C27	Manufacture of electrical equipment	1.76 %
C28	Manufacture of machinery and equipment n.e.c.	0.11 %
C29	Manufacture of motor vehicles, trailers and semi-trailers	1.95 %

O84.1	Administration of the State and the economic and social policy of the community	7.31 %
Other	NOT SECTORIZED	5.51 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 7.31 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	6.64 %
Climate change adaptation	0.00 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.21 %
Enabling activities	3.97 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	7.2 %	10.12 %	6.71 %
Capex	9.71 %	14.63 %	0 %
Opex	8.02 %	12.32 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	7.77 %	16.72 %	10.54 %
Capex	10.47 %	24.17 %	0 %
Opex	8.65 %	20.35 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 16.7% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 37.19% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Climate Transition Europe

Legal entity identifier: 52990080FLOXFRNVGP49

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 70.92% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Climate Transition Europe (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity) and invests a minimum percentage, which was increasing over time, in issuers which had set the ambition and taken actions to reach the Paris Agreement's goal[1]. The goal of the Paris Agreement is to keep global temperature well below 2° Celsius. This requires a fixed greenhouse gas ("GHG") emission budget and GHG emissions to reach net zero, meaning that residual emissions would need to be balanced by carbon removals by around 2050 ("Net Zero"). The Investment Manager had developed a methodology to assess issuers' commitments, targets and ability to transition to meet Net Zero objective. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- In a third step, the Investment Manager assessed issuers on multiple criteria such as 2050 ambition, emission reduction target, emissions performance relative to targets, emissions disclosure, transition

plan, or capital allocation alignment. Issuers from high impact sectors had stricter fulfillment requirements than low impact sectors of the same bucket. Each issuer was then classified in one of the transition categories: (1) achieving Net Zero, (2) aligned to Net Zero, (3) aligning to Net Zero, (4) committed to Net Zero and (5) not aligned to Net Zero. Investments (excluded cash and derivatives) from issuers classified in (1) achieving Net Zero, (2) aligned to Net Zero, and (3) aligning to Net Zero were considered in the Net Zero Alignment Share before October 1, 2030. Based on this, the Investment Manager managed the Sub-Fund so that min. 30% of the portfolio was invested in investments contributing to the Net Zero Alignment Share. From October 1, 2030 on, Investments (excluded cash and derivatives) from issuers classified in (1) achieving Net Zero and (2) aligned to Net Zero were considered in the Net Zero Alignment Share and the Net Zero alignment share of the Sub-Fund's portfolio needs to be at 50% or above.

- Further, the Investment Manager adhered to a minimum percentage of 30.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

[1]<https://www.un.org/en/climatechange/paris-agreement>

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The investment universe has been reduced by excluding at least 20.00% of the total number of potential issuers compared to the investible issuers according to the Sub-Fund's general investment strategy as described in the prospectus.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The Investment Manager invested with regard to scored issuers only in issuers with an internal score of 2 or more. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- The actual Net Zero Alignment Share of the portfolio at the financial year was 61.62 %. The percentage the share of the Sub-Fund's portfolio invested in issuers allocated to categories (1) to (3) before October 01, 2030 and percentage of the Sub-Fund's portfolio invested in issuers allocated to categories (1) and (2) from October 01, 2030 on. The calculation is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document in the pre-contractual document of the Sub-Fund.

- The actual percentage of the portfolio in issuers which have been assessed and been allocated into categories (1) to (5) at the end of the financial year was 93.8 %. The calculation is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document in the pre-contractual document of the Sub-Fund.

- ... and compared to previous periods?

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a proprietary sustainability score was	-	100.09%	101.21%
The actual Net Zero Alignment Share of the portfolio at the financial year was	61.62%	-	-
The actual percentage of the portfolio in issuers which have been assessed and been allocated into categories (1) to (5) at the end of the financial year was	93.8%	-	-
Confirmation that the binding element with a proprietary sustainability score of 1 or more for scored issuers has been adhered to throughout the financial year	The Investment Manager invested with regard to scored issuers only in issuers with an internal score of 1 or more.		
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	3.94 %
B08	Other mining and quarrying	0.79 %
B09	Mining support service activities	3.16 %

O84.1	Administration of the State and the economic and social policy of the community	0.25 %
Other	NOT SECTORIZED	-0.50 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0.25 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	9.94 %
Climate change adaptation	0.01 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.14 %
Enabling activities	6.35 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	10.28 %	6.97 %	8.15 %
Capex	14.37 %	11.31 %	0 %
Opex	9.93 %	8.51 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	10.3 %	6.97 %	8.17 %
Capex	14.4 %	11.31 %	0 %
Opex	9.96 %	8.51 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 7.15% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 53.33% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Convertible Bond

Legal entity identifier: 5299001GCNUJ1XFXOL76

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 46.16% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Convertible Bond (the "Sub-Fund") promoted environmental and social characteristics as well as the management of greenhouse gas ("GHG") intensity. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed investments (excluded cash and derivatives) according to the greenhouse gas ("GHG") emissions of investee companies as far as such data was available. Based on this, the Investment Manager managed the Sub-Fund in a way that the GHG intensity of the portfolio was lower than the GHG intensity of the Sub-Fund's benchmark. GHG intensity was defined as GHG emissions (scope 1 and 2) per million USD sales of the issuer. GHG emissions per million USD sales was used, as this metrics allows to differentiate between more and less energy efficient issuers. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio GHG intensity data must be available.

A reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio which is covered by GHG intensity data was 89.56%. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual GHG intensity of the Sub-Fund's portfolio was 12.23% lower than the GHG intensity of the benchmark at the relevant financial year. The calculation of the GHG intensity is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

The binding elements except for one criterion were adhered to throughout the financial year 2025. The criterion which was not adhered to for a certain time period led to investment limit violations. These violations were resolved according to the internal policies of the Investment Manager.

- **... and compared to previous periods?**

On 02.06.2023, the sustainable investment approach was changed from the Climate Engagement with Outcome (CEWO) to another E/S Strategy (KPI Strategy - Relative). The indicators for measuring compliance with ecological and social characteristics between the investment approaches are only partially comparable. If the indicators for the CEWO are not comparable, they are not included in the table. For information on the performance of the strategy, please refer to the 2023 year-end report (available upon request).

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio which is covered by GHG intensity data was	89.56%	95.48%	92.36%
The actual average GHG intensity of the Sub-Fund's portfolio vs average GHG intensity of the benchmark was lower by	12.23%	18.57%	9.32%
The response rate (companies replied to the engagement questionnaire) was*	-	-	83%
Change of the carbon footprint**	-	-	23.8%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

* The top 10 carbon emitting issuers are determined periodically. Over the reference dates Q4/2020, Q1/2022 and Q1/2023 the 18 emitters were identified.

** Change of the CO2 emissions of the year 2019 compared to 2021.

All investments in sovereign issuers were evaluated with an SRI rating until the sustainable investment approach was changed.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies

- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	25.02 %
C10	Manufacture of food products	0.11 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	4.60 %
C22	Manufacture of rubber and plastic products	4.26 %
C26	Manufacture of computer, electronic and optical products	5.65 %
C27	Manufacture of electrical equipment	6.42 %
C28	Manufacture of machinery and equipment n.e.c.	2.86 %
C29	Manufacture of motor vehicles, trailers and semi-trailers	0.09 %
C30	Manufacture of other transport equipment	1.04 %
D	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	6.82 %
D35	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	6.82 %
E	WATER SUPPLY; SEWERAGE, WASTE MANAGEMENT AND REMEDIATION ACTIVITIES	0.01 %
E37	Sewerage	0.01 %
F	CONSTRUCTION	0.02 %
F42	Civil engineering	0.02 %
G	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	4.87 %
G46	Wholesale trade, except of motor vehicles and motorcycles	0.00 %
G47	Retail trade, except of motor vehicles and motorcycles	4.87 %
H	TRANSPORTATION AND STORAGE	4.16 %
H49	Land transport and transport via pipelines	3.20 %
H51	Air transport	0.96 %
I	ACCOMMODATION AND FOOD SERVICE ACTIVITIES	4.04 %
I55	Accommodation	4.04 %
J	INFORMATION AND COMMUNICATION	4.16 %
J61	Telecommunications	1.00 %
J62	Computer programming, consultancy and related activities	1.10 %
J63	Information service activities	2.06 %
K	FINANCIAL AND INSURANCE ACTIVITIES	23.82 %
K64	Financial service activities, except insurance and pension funding	17.23 %
K66	Activities auxiliary to financial services and insurance activities	6.59 %
L	REAL ESTATE ACTIVITIES	11.99 %
L68	REAL ESTATE ACTIVITIES	11.99 %
M	PROFESSIONAL, SCIENTIFIC AND TECHNICAL ACTIVITIES	1.20 %
M71	Architectural and engineering activities; technical testing and analysis	1.20 %
N	ADMINISTRATIVE AND SUPPORT SERVICE ACTIVITIES	4.07 %
N77	Rental and leasing activities	0.06 %

N79	Travel agency, tour operator and other reservation service and related activities	4.02 %
O	PUBLIC ADMINISTRATION AND DEFENCE; COMPULSORY SOCIAL SECURITY	1.90 %
O84	Public administration and defence; compulsory social security, from which:	1.90 %
O84.1	Administration of the State and the economic and social policy of the community	1.90 %
Q	HUMAN HEALTH AND SOCIAL WORK ACTIVITIES	3.45 %
Q86	Human health activities	3.45 %
S	OTHER SERVICE ACTIVITIES	1.05 %
S96	Other personal service activities	1.05 %
Other	NOT SECTORIZED	3.40 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 1.9 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	8.44 %
Climate change adaptation	0.01 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	1.17 %
Enabling activities	6.09 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	9.7 %	7 %	4.7 %
Capex	11.21 %	6.73 %	0 %
Opex	12.13 %	9.63 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	9.89 %	7.1 %	4.77 %
Capex	11.42 %	6.83 %	0 %
Opex	12.37 %	9.77 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 4.72% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 31.63% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these

investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager’s engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI’s strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI’s holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Investment Manager has assigned the index "Refinitiv Europe Focus CB (EUR)" as the Sub-Fund's benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by managing the GHG intensity so that it will be continuously lower than the GHG intensity of the benchmark as described in the section "What investment strategy does this financial product follow?".

- [How did the reference benchmark differ from a broad market index?](#)

The Sub-Fund's benchmark is a market index.

- [How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?](#)

The actual GHG intensity of the Sub-Fund's portfolio was 12.23 % lower than the GHG intensity of the benchmark at the relevant financial year end. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- [How did this financial product perform compared with the reference benchmark?](#)

01/10/2024 - 30/09/2025	Allianz Convertible Bond	Benchmark	Active Return
Performance %	4.65	4.87	-0.22

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did this financial product perform compared with the broad market index?

01/10/2024 - 30/09/2025	Allianz Convertible Bond	Benchmark	Active Return

Product name:

Allianz Credit Opportunities

Legal entity identifier: 549300LLGF2AILHIS736

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 40.25% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Credit Opportunities (the "Sub-Fund") promoted a broad range of environmental and social characteristics. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by, excluded direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager adhered to a minimum percentage of 20.00% of Sustainable Investments. Sustainable Investments include a broad range of environmental and social topics, for which the Investment Manager used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the EU Taxonomy objectives. The proprietary methodology to assess the environmental and social contribution was described in the section "What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?" and contained an assessment of the positive contribution to environmental and social contributions as well as an assessment to avoid significant harm to any environmental or social objective.
- Further, the Investment Manager committed to invest minimum 70% of Sub-Fund's net asset value into issuers which, as assessed by the Investment Manager, were not considered to significantly harm any environmental or social objective according to the Sustainable Investment methodology. The Investment Manager adhered to a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the
environmental or social
characteristics promoted
by the financial product
are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 10% of their revenue from thermal coal extraction,

- active within the utility sector and generating more than 20% of their revenues from coal,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of assets invested in issuers which have been assessed according to the Sustainable Investments methodology at the end of the financial year was 92.97 %. The calculation of the Sustainable Investments methodology is described below in the sections "What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?" and "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual Sustainable Investment share at the end of the financial year was 40.25 %.

- The actual percentage of investments that pass the assessment to significantly harm environmental or social objectives at the end of the financial year was 2.81 %.

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	0.10 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 5.94 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	6.29 %
Climate change adaptation	0.01 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.26 %
Enabling activities	3.35 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 8.56% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 25.74% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Cyber Security

Legal entity identifier: 529900I11GBTWP04NS84

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 75.45% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Cyber Security (the "Sub-Fund") promoted environmental and social characteristics as well as the management of greenhouse gas ("GHG") intensity. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed investments (excluded cash and derivatives) according to the greenhouse gas ("GHG") emissions of investee companies as far as such data was available. Based on this, the Investment Manager managed the Sub-Fund in a way that the GHG intensity of the portfolio was lower than the GHG intensity of the Sub-Fund's benchmark. GHG intensity was defined as GHG emissions (scope 1 and 2) per million USD sales of the issuer. GHG emissions per million USD sales was used, as this metrics allows to differentiate between more and less energy efficient issuers. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio GHG intensity data must be available.
- Further, the Investment Manager adhered to a minimum percentage of 2.00% of Sustainable Investments.

A reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio which is covered by GHG intensity data was 92.22%. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual GHG intensity of the Sub-Fund's portfolio was 0.46% lower than the GHG intensity of the benchmark at the relevant financial year. The calculation of the GHG intensity is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **... and compared to previous periods?**

On 02.06.2023, the sustainable investment approach was changed from the Climate Engagement with Outcome (CEWO) to another E/S Strategy (KPI Strategy - Relative). The indicators for measuring compliance with ecological and social characteristics between the investment approaches are only partially comparable. If the indicators for the CEWO are not comparable, they are not included in the table. For information on the performance of the strategy, please refer to the 2023 year-end report (available upon request).

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio which is covered by GHG intensity data was	92.22%	-	-
The actual average GHG intensity of the Sub-Fund's portfolio vs average GHG intensity of the benchmark was lower by	0.46%	-	-
The response rate (companies replied to the engagement questionnaire) was*	-	-	80%
Change of the carbon footprint**	-	-	32.7%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

* The top 10 carbon emitting issuers are determined periodically. Over the reference dates Q4/2020, Q1/2022 and Q1/2023 the 15 emitters were identified.

** Change of the CO2 emissions of the year 2019 compared to 2021.

All investments in sovereign issuers were evaluated with an SRI rating until the sustainable investment approach was changed.

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
CLOUDFLARE INC - CLASS A	INFORMATION AND COMMUNICATION	7.41 %	USA
CROWDSTRIKE HOLDINGS INC - A	INFORMATION AND COMMUNICATION	6.83 %	USA
PALO ALTO NETWORKS INC	INFORMATION AND COMMUNICATION	5.49 %	USA
BROADCOM INC	MANUFACTURING	5.23 %	USA
CYBERARK SOFTWARE LTD/ISRAEL	INFORMATION AND COMMUNICATION	4.94 %	USA
FORTINET INC	INFORMATION AND COMMUNICATION	4.77 %	USA
RUBRIK INC-A	INFORMATION AND COMMUNICATION	4.30 %	USA
ZSCALER INC	INFORMATION AND COMMUNICATION	4.20 %	USA
CISCO SYSTEMS INC	MANUFACTURING	3.73 %	USA
SENTINELONE INC -CLASS A	INFORMATION AND COMMUNICATION	3.22 %	USA

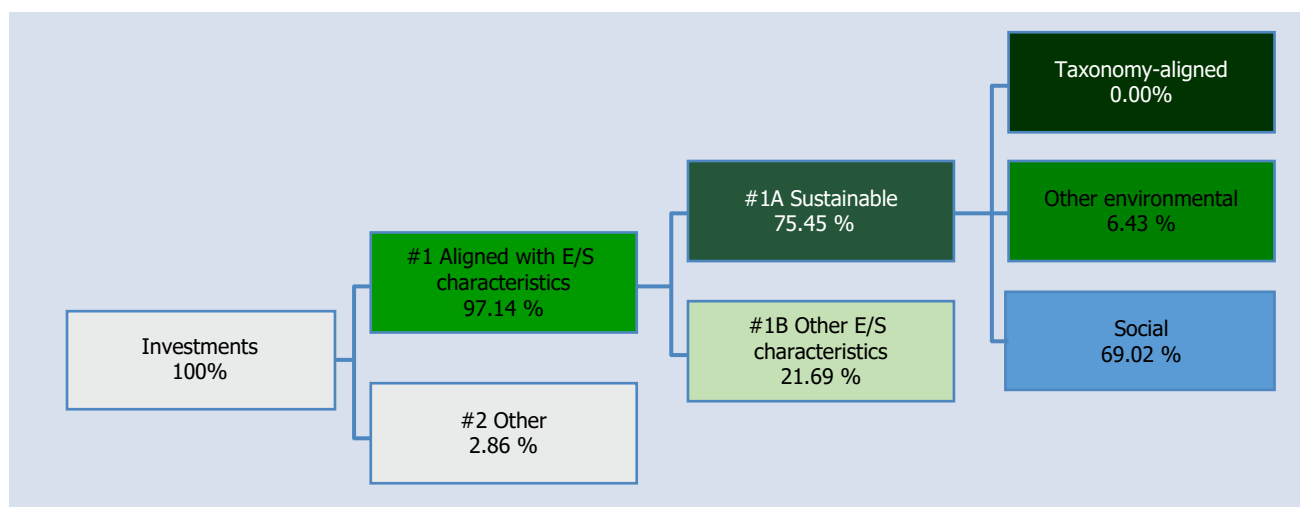

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	14.21 %
C26	Manufacture of computer, electronic and optical products	14.21 %
G	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	1.40 %
G47	Retail trade, except of motor vehicles and motorcycles	1.40 %
J	INFORMATION AND COMMUNICATION	80.63 %
J58	Publishing activities	45.79 %
J62	Computer programming, consultancy and related activities	22.33 %
J63	Information service activities	12.51 %
K	FINANCIAL AND INSURANCE ACTIVITIES	0.07 %
K66	Activities auxiliary to financial services and insurance activities	0.07 %
Other	NOT SECTORIZED	3.68 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	0 %	0 %	0 %
Capex	0 %	0 %	0 %
Opex	0 %	0 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	0 %	0 %	0 %
Capex	0 %	0 %	0 %
Opex	0 %	0 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 6.43% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 69.02% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI 's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Investment Manager has assigned the index "ISE Cyber Security UCITS Total Return Net" as the Sub-Fund's benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by managing the GHG intensity so that it will be continuously lower than the GHG intensity of the benchmark as described in the section "What investment strategy does this financial product follow?".

- **How did the reference benchmark differ from a broad market index?**

The Sub-Fund's benchmark is a market index.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The actual GHG intensity of the Sub-Fund's portfolio was 0.46 % lower than the GHG intensity of the benchmark at the relevant financial year end. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **How did this financial product perform compared with the reference benchmark?**

01/10/2024 - 30/09/2025	Allianz Cyber Security	Benchmark	Active Return
Performance %	36.66	24.46	12.20

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did this financial product perform compared with the broad market index?

01/10/2024 - 30/09/2025	Allianz Cyber Security	Benchmark	Active Return
Performance %	36.66	24.46	12.20

Product name:

Allianz Dynamic Allocation Plus Equity

Legal entity identifier: 529900R0F5AODZYTEH16

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 47.73% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Dynamic Allocation Plus Equity (the "Sub-Fund") promoted a broad range of environmental and social characteristics. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe direct investments which were selected with respect to sustainability aspects and other internal funds ("Target Funds") which promote environmental or social characteristics, or which had Sustainable Investments as an objective for at least 70% of the Sub-Fund's assets. Target Funds were counted into the 70% if they disclose according to Art 8 Sustainable Finance Disclosure Regulation ("SFDR") or Art 9 SFDR. Direct investments were counted into the 70% if they were managed according to another approach of the Investment Manager qualifying as Art 8 or 9 SFDR).
- Further, the Investment Manager adhered to a minimum percentage of 20.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the Sub-Fund's assets invested in direct investments which are selected with respect to sustainability aspects and Target Funds which promote environmental or social characteristics, or which have Sustainable Investments as an objective at the end of the financial year was 86.93 %. In case the Investment Manager decides to directly invest in Debt or Equity Securities which are selected with respect to sustainability aspects the adherence to the respective binding element will be reported.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024
The actual percentage of the Sub-Fund's assets invested in direct investments which are selected with respect to sustainability aspects and Target Funds which promote environmental or social characteristics, or which have Sustainable Investments as an objective at the end of the financial year was	86.93 %	90.31 %
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year	

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. The exclusion criteria did not apply to Target Funds managed by another Investment Manager and for Target Funds managed by the Investment Manager, but which did not promote environmental or social characteristics or did not have Sustainable Investments as an objective. The Investment Manager would limit this part of the Sub-Fund assets to 30%, so that the exclusion criteria applied to the majority of the Sub-Funds assets. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogeneous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 10.03 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?**

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.74 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.14 %
Enabling activities	0.27 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024
Turnover	0.93 %	0.84 %
Capex	1.23 %	1.76 %
Opex	1.07 %	1.21 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024
Turnover	1.04 %	0.95 %
Capex	1.37 %	1.99 %
Opex	1.18 %	1.37 %

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 10.72% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 36.08% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- [How did the reference benchmark differ from a broad market index?](#)

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- [How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?](#)

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- [How did this financial product perform compared with the reference benchmark?](#)

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did this financial product perform compared with the broad market index?

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Product name:

Allianz Dynamic Multi Asset Strategy SRI 15

Legal entity identifier: 549300PQDMLKLFQGT068

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 33.96% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Dynamic Multi Asset Strategy SRI 15 (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- Further, the Investment Manager adhered to a minimum percentage of 10.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document in the pre-contractual document of the Sub-Fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 1% of their revenues from exploration, mining, extraction, distribution or refining of thermal coal,

- active within the utility sector and generating more than 20% of their revenues from coal,

- deriving more than 10% of their revenues from the exploration, extraction, distribution or refining of oil fuels,

- deriving more than 50% of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels,

- deriving more than 50% of their revenues from electricity generation with a GHG intensity of more than 100 g CO₂ e/kWh,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The investment universe has been reduced by excluding at least 20.00% of the total number of potential issuers compared to the investible issuers according to the Sub-Fund's general investment strategy as described in the prospectus.

- The actual percentage of the portfolio with a proprietary sustainability score of 1 or more was 91.33 % at the financial year end. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a proprietary sustainability score was	91.33%	88.48%	89.17%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 37.09 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Climate change mitigation	1.67 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.13 %
Enabling activities	0.66 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	1.78 %	1.01 %	1.23 %
Capex	2.53 %	1.76 %	0 %
Opex	1.7 %	1.37 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	2.82 %	1.73 %	1.94 %
Capex	4.02 %	3.01 %	0 %
Opex	2.7 %	2.33 %	0 %

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 7.85% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 24.3% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Dynamic Multi Asset Strategy SRI 30

Legal entity identifier: 529900ISA0PI6X32ID83

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 36.96% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Dynamic Multi Asset Strategy SRI 30 (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- Further, the Investment Manager adhered to a minimum percentage of 10.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 1% of their revenues from exploration, mining, extraction, distribution or refining of thermal coal,
- active within the utility sector and generating more than 20% of their revenues from coal,
- deriving more than 10% of their revenues from the exploration, extraction, distribution or refining of oil fuels,
- deriving more than 50% of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels,
- deriving more than 50% of their revenues from electricity generation with a GHG intensity of more than 100 g CO₂ e/kWh,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The investment universe has been reduced by excluding at least 20.00% of the total number of potential issuers compared to the investible issuers according to the Sub-Fund's general investment strategy as described in the prospectus.

- The actual percentage of the portfolio with a proprietary sustainability score of 1 or more was 91.51 % at the financial year end. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024
The actual percentage of the portfolio with a proprietary sustainability score was	91.51%	84.33%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year	

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 33.84 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?**

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	1.82 %
Climate change adaptation	0.00 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.22 %
Enabling activities	0.73 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024
Turnover	1.97 %	1.2 %
Capex	2.79 %	2.14 %
Opex	1.83 %	1.63 %

Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024
Turnover	2.97 %	1.84 %
Capex	4.21 %	3.29 %
Opex	2.77 %	2.51 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 10.16% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 24.82% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI 's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Dynamic Multi Asset Strategy SRI 50

Legal entity identifier: 529900NLULWWNUAUMG29

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 42.27% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Dynamic Multi Asset Strategy SRI 50 (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- Further, the Investment Manager adhered to a minimum percentage of 15.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 1% of their revenues from exploration, mining, extraction, distribution or refining of thermal coal,

- active within the utility sector and generating more than 20% of their revenues from coal,

- deriving more than 10% of their revenues from the exploration, extraction, distribution or refining of oil fuels,

- deriving more than 50% of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels,

- deriving more than 50% of their revenues from electricity generation with a GHG intensity of more than 100 g CO₂ e/kWh,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The investment universe has been reduced by excluding at least 20.00% of the total number of potential issuers compared to the investible issuers according to the Sub-Fund's general investment strategy as described in the prospectus.

- The actual percentage of the portfolio with a proprietary sustainability score of 1 or more was 91.09 % at the financial year end. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a proprietary sustainability score was	91.09%	88.98%	90.15%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
ISHARES JP MORGAN ADVANCED \$	N/A	3.18 %	United Kingdom

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
A	AGRICULTURE, FORESTRY AND FISHING	0.05 %
A01	Crop and animal production, hunting and related service activities	0.05 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 15.47 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	2.21 %
Climate change adaptation	0.00 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.14 %
Enabling activities	0.66 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	2.38 %	1.11 %	1.82 %
Capex	3.2 %	2.04 %	0 %
Opex	1.79 %	1.49 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	2.82 %	1.35 %	2.15 %
Capex	3.78 %	2.5 %	0 %
Opex	2.12 %	1.83 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 8.11% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 31.77% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Dynamic Multi Asset Strategy SRI 75

Legal entity identifier: 549300MVG26JNLKWO33

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 46.26% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Dynamic Multi Asset Strategy SRI 75 (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- Further, the Investment Manager adhered to a minimum percentage of 20.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 1% of their revenues from exploration, mining, extraction, distribution or refining of thermal coal,
- active within the utility sector and generating more than 20% of their revenues from coal,
- deriving more than 10% of their revenues from the exploration, extraction, distribution or refining of oil fuels,
- deriving more than 50% of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels,
- deriving more than 50% of their revenues from electricity generation with a GHG intensity of more than 100 g CO2 e/kWh,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The investment universe has been reduced by excluding at least 20.00% of the total number of potential issuers compared to the investible issuers according to the Sub-Fund's general investment strategy as described in the prospectus.

- The actual percentage of the portfolio with a proprietary sustainability score of 1 or more was 92.63 % at the financial year end. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a proprietary sustainability score was	92.63%	87.66%	90.95%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
SCHRODER INTL EMG EUROPE-AAC	N/A	2.71 %	Luxembourg

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
A	AGRICULTURE, FORESTRY AND FISHING	0.06 %
A01	Crop and animal production, hunting and related service activities	0.06 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 7 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Climate change mitigation	2.44 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.16 %
Enabling activities	0.66 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	2.72 %	1.19 %	1.92 %
Capex	3.53 %	2.18 %	0 %
Opex	1.85 %	1.54 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	2.92 %	1.31 %	2.12 %
Capex	3.79 %	2.4 %	0 %
Opex	1.99 %	1.7 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 8.32% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 35.22% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Emerging Markets Corporate Bond

Legal entity identifier: 529900G3RBZLNLUYXA43

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 40.31% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Emerging Markets Corporate Bond (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- Further, the Investment Manager adhered to a minimum percentage of 5.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 10% of their revenue from thermal coal extraction,

- active within the utility sector and generating more than 20% of their revenues from coal,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers, an internal scoring model weighting various environmental, social and governance factors is applied for which freedom house index is considered as one criterion amongst further criteria. Debt Securities of issuers other than sovereign issuers may not be acquired if the respective issuer's country does not meet the requirements of the aforesaid internal scoring model.

- The investment universe has been reduced by excluding at least 20.00% of the total number of potential issuers compared to the investible issuers according to the Sub-Fund's general investment strategy as described in the prospectus.

- The actual percentage of the portfolio with a proprietary sustainability score of 2 or more was 79.22 % at the financial year end. The actual percentage of the benchmark with a proprietary sustainability score was 59.59 %. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a proprietary sustainability score was	79.22%	72.05%	65.42%
The actual percentage of the benchmark with a proprietary sustainability score was	59.59%	50.61%	45.1%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
A	AGRICULTURE, FORESTRY AND FISHING	1.04 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 3.38 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?**

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.14 %
Climate change adaptation	0.02 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.02 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	0.16 %	2.06 %	1.48 %
Capex	0.64 %	0 %	0 %
Opex	0.33 %	0 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	0.16 %	2.12 %	1.62 %
Capex	0.66 %	0 %	0 %
Opex	0.34 %	0 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 10.11% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 30.04% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these

investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Emerging Markets Equity SRI

Legal entity identifier: 5299008XMKNR6M71KE54

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 56.53% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Emerging Markets Equity SRI (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step, the Investment Manager identifies those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at class 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- In a second step, excluded direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- Further, the Investment Manager adhered to a minimum percentage of 10.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons),
- deriving more than 5% of their revenues from (i) weapons or (ii) military equipment and military services,
- deriving more than 1% of their revenues from exploration, mining, extraction, distribution or refining of thermal coal,
- active within the utility sector and generating more than 20% of their revenues from coal,
- deriving more than 50% of their revenues from electricity generation with a GHG intensity of more than 100 g CO₂ e/kWh,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco,
- deriving more than 5% of their revenues from the sum of (i) the production of and (ii) providing services in relation to hydraulic fracturing,
- deriving more than 10% of their revenues from the production of alcohol (limited to spirits),
- deriving more than 5% of their revenues from the production of agricultural genetically modified organisms ("GMOs"),
- deriving more than 10% of their revenues from the sum of (i) the production of and (ii) providing services in relation to nuclear power,
- involved in the production of arctic drilling,
- deriving more than 5% of their revenues from gambling,
- deriving more than 5% of their revenues from the (i) production or (ii) exploration of oil sands,
- deriving more than 10% of their revenues from the exploration, extraction, distribution or refining of oil fuels,
- deriving more than 50% of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels,
- deriving more than 5% of their revenues from the (i) production or (ii) distribution/sales of pornography.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The investment universe has been reduced by excluding at least 20.00% of the total number of potential issuers compared to the investible issuers according to the Sub-Fund's general investment strategy as described in the prospectus.

- The actual percentage of the portfolio with a proprietary sustainability score of 1 or more was 100 % at the financial year end. The actual percentage of the benchmark with a proprietary sustainability score was 99.59 %. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- ... and compared to previous periods?

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a proprietary sustainability score was	100%	97.26%	96.79%
The actual percentage of the benchmark with a proprietary sustainability score was	99.59%	93.4%	91.2%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
TAIWAN SEMICONDUCTOR MANUFAC	MANUFACTURING	5.25 %	Taiwan
ALIBABA GROUP HOLDING LIMITED	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	5.06 %	People's Republic of China
SAMSUNG ELECTRONICS CO LTD	MANUFACTURING	4.56 %	South Korea

XIAOMI CORP-CLASS B	MANUFACTURING	1.20 %	People's Republic of China
PKO BANK POLSKI SA	FINANCIAL AND INSURANCE ACTIVITIES	1.09 %	Poland

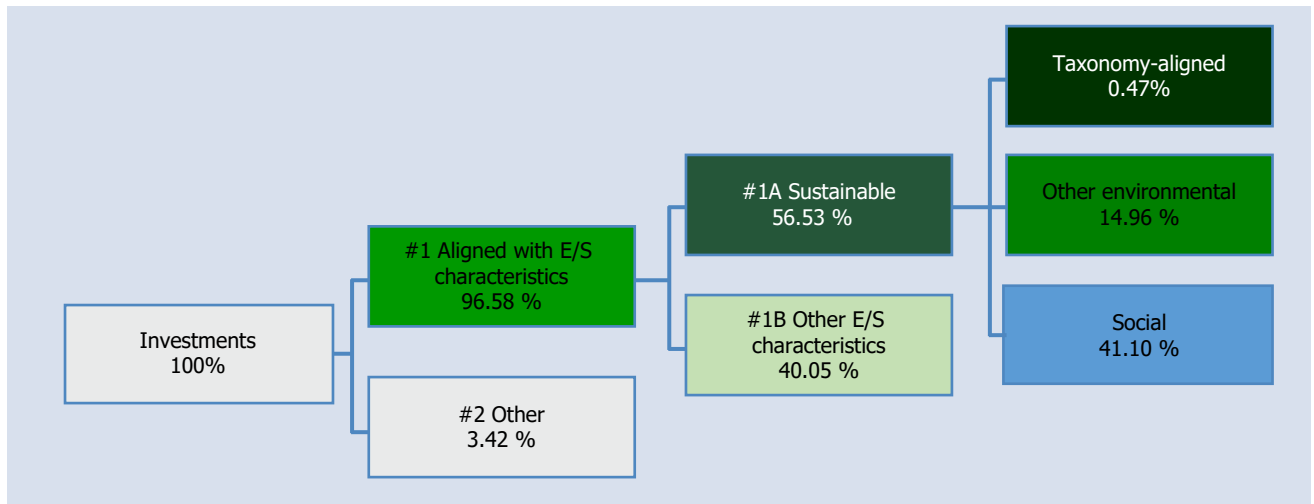

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	2.11 %
B07	Mining of metal ores	2.11 %
C	MANUFACTURING	38.88 %
C10	Manufacture of food products	2.20 %
C11	Manufacture of beverages	0.54 %
C15	Manufacture of leather and related products	0.34 %

P85	EDUCATION	0.37 %
Q	HUMAN HEALTH AND SOCIAL WORK ACTIVITIES	0.41 %
Q86	Human health activities	0.41 %
Other	NOT SECTORIZED	4.17 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- [Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?](#)

Yes

In fossil gas

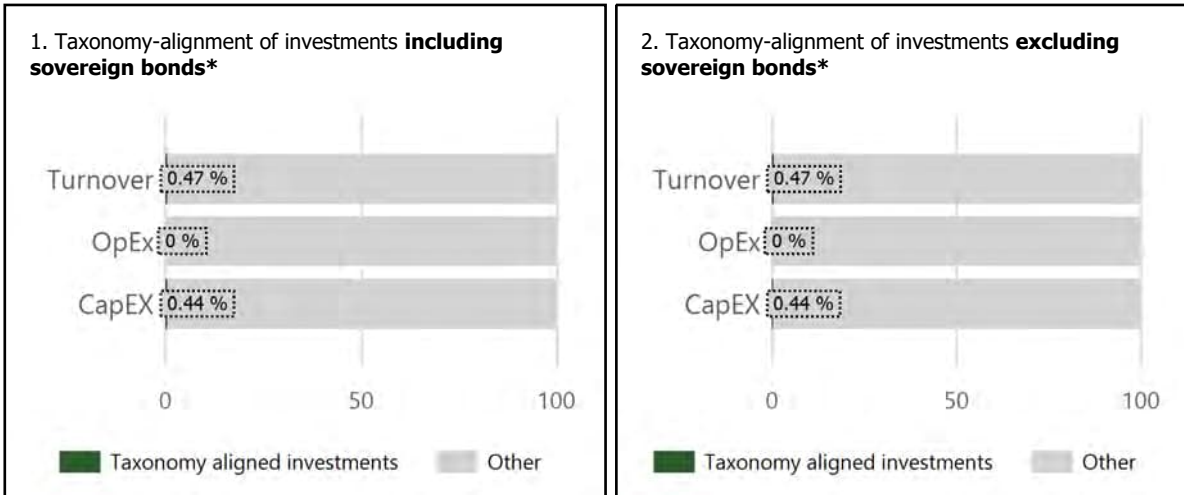

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.15 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.03 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	0.47 %	1.49 %	0.21 %
Capex	0.44 %	0.22 %	0 %
Opex	0 %	0.04 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	0.47 %	1.5 %	0.21 %
Capex	0.44 %	0.22 %	0 %
Opex	0 %	0.04 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 14.96% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 41.1% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these

investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Emerging Markets Sovereign Bond

Legal entity identifier: 529900PDB0P3EZZYVP70

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 6.45% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Emerging Markets Sovereign Bond (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 10% of their revenue from thermal coal extraction,

- active within the utility sector and generating more than 20% of their revenues from coal,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers identified by the FATF blacklist [1].

- The actual percentage of the portfolio with a proprietary sustainability score of 2 or more was 67.17 % at the financial year end. The actual percentage of the benchmark with a proprietary sustainability score was 56.25 %. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The Sub-Fund considers for the part, which are counted as sustainable investments, PAI indicators as part of the DNSH assessment. The Sub-Fund does however not consider PAI indicators as binding element of the Sub-Fund.

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
DOMINICAN REPUBLIC REGS FIX 4.875% 23.09.2032	Administration of the State and the economic and social policy of the community (O84.1)	3.32 %	Dominican Republic

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	2.15 %
B06	Extraction of crude petroleum and natural gas	2.15 %
C	MANUFACTURING	1.63 %
C19	Manufacture of coke and refined petroleum products	1.22 %
C20	Manufacture of chemicals and chemical products	0.41 %
H	TRANSPORTATION AND STORAGE	0.24 %
H52	Warehousing and support activities for transportation	0.24 %
K	FINANCIAL AND INSURANCE ACTIVITIES	3.05 %
K64	Financial service activities, except insurance and pension funding	1.88 %
K65	Insurance, reinsurance and pension funding, except compulsory social security	0.59 %
K66	Activities auxiliary to financial services and insurance activities	0.57 %
N	ADMINISTRATIVE AND SUPPORT SERVICE ACTIVITIES	0.25 %
N79	Travel agency, tour operator and other reservation service and related activities	0.25 %
O	PUBLIC ADMINISTRATION AND DEFENCE; COMPULSORY SOCIAL SECURITY	92.02 %
O84	Public administration and defence; compulsory social security, from which:	92.02 %
O84.1	Administration of the State and the economic and social policy of the community	92.02 %
Other	NOT SECTORIZED	0.66 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 92.02 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 1.41% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 5.05% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Emerging Markets SRI Bond

Legal entity identifier: 529900V4JP0EVDIGZD94

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 8.5% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Emerging Markets SRI Bond (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- Further, the Investment Manager adhered to a minimum percentage of 5.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does

this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 1% of their revenues from exploration, mining, extraction, distribution or refining of thermal coal,

- active within the utility sector and generating more than 20% of their revenues from coal,

- deriving more than 10% of their revenues from the exploration, extraction, distribution or refining of oil fuels,

- deriving more than 50% of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels,

- deriving more than 50% of their revenues from electricity generation with a GHG intensity of more than 100 g CO₂ e/kWh,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

- The investment universe has been reduced by excluding at least 20.00% of the total number of potential issuers compared to the investible issuers according to the Sub-Fund's general investment strategy as described in the prospectus.

- The actual percentage of the portfolio with a proprietary sustainability score of 2 or more was 101.66 % at the financial year end. The actual percentage of the benchmark with a proprietary sustainability score was 69.05 %. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a proprietary sustainability score was	101.66%	89.7%	88.69%
The actual percentage of the benchmark with a proprietary sustainability score was	69.05%	79.58%	75.9%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
D	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	0.99 %
D35	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	0.99 %
H	TRANSPORTATION AND STORAGE	1.31 %
H52	Warehousing and support activities for transportation	1.31 %
K	FINANCIAL AND INSURANCE ACTIVITIES	3.94 %
K64	Financial service activities, except insurance and pension funding	2.68 %
K65	Insurance, reinsurance and pension funding, except compulsory social security	0.60 %
K66	Activities auxiliary to financial services and insurance activities	0.66 %
O	PUBLIC ADMINISTRATION AND DEFENCE; COMPULSORY SOCIAL SECURITY	92.79 %
O84	Public administration and defence; compulsory social security, from which:	92.79 %
O84.1	Administration of the State and the economic and social policy of the community	92.79 %
Other	NOT SECTORIZED	0.97 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 92.79 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

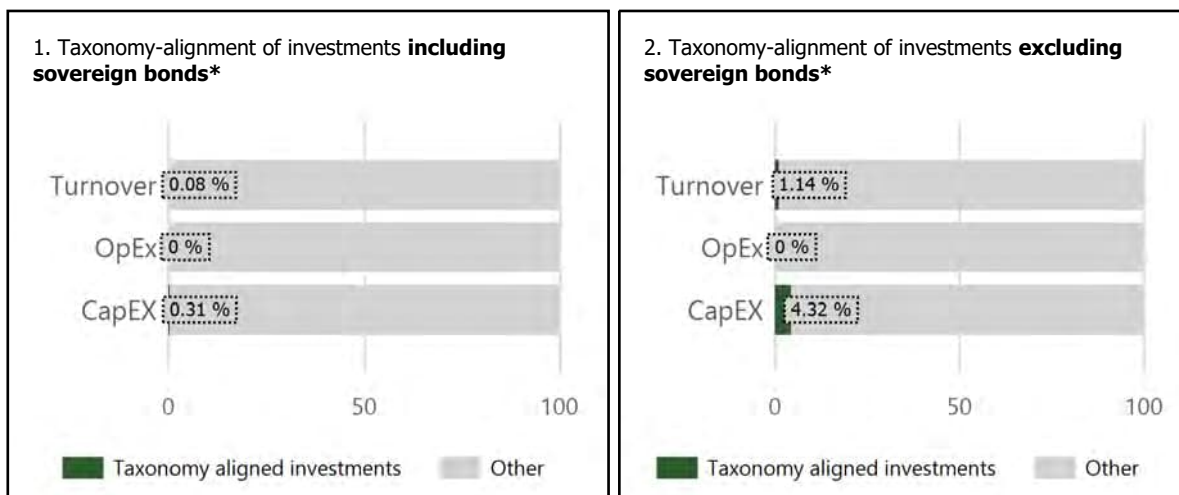

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.08 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	0.08 %	0.17 %	0.87 %
Capex	0.31 %	0 %	0 %
Opex	0 %	0 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	1.14 %	1.6 %	6.07 %
Capex	4.32 %	0 %	0 %
Opex	0 %	0 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 3.9% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 4.52% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these

investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Enhanced Short Term Euro

Legal entity identifier: 549300S8WEDESAX7W77

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 55.44% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Enhanced Short Term Euro (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- Further, the Investment Manager adhered to a minimum percentage of 2.50% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does

this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 10% of their revenue from thermal coal extraction,

- active within the utility sector and generating more than 20% of their revenues from coal,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The actual percentage of the portfolio with a proprietary sustainability score of 1 or more was 98.37 % at the financial year end. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a proprietary sustainability score was	98.37%	95.85%	94.98%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	10.81 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

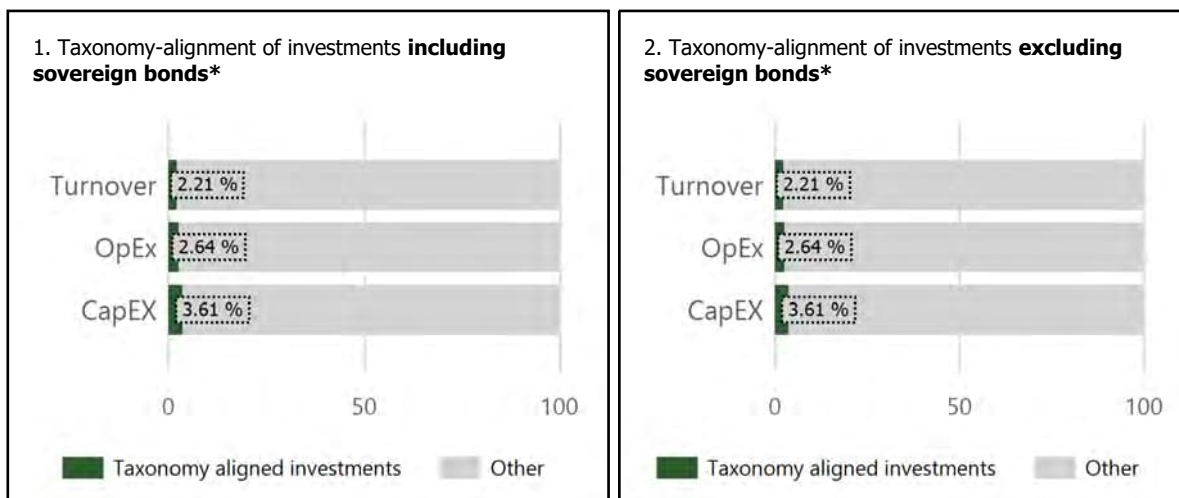

Yes

In fossil gas In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	2.21 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.45 %
Enabling activities	0.72 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	2.21 %	1.53 %	0.67 %
Capex	3.61 %	3.38 %	0 %
Opex	2.64 %	2.52 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	2.21 %	1.65 %	0.99 %
Capex	3.61 %	3.66 %	0 %
Opex	2.64 %	2.73 %	0 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 13.45% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 39.72% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager’s engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI’s strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI’s holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Product name:

Allianz Euro Balanced

Legal entity identifier: 529900R48QOZDVDDMW24

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 41.71% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Euro Balanced (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- Further, the Investment Manager adhered to a minimum percentage of 7.50% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does

this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 10% of their revenue from thermal coal extraction,

- active within the utility sector and generating more than 20% of their revenues from coal,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The actual percentage of the portfolio with a proprietary sustainability score of 1 or more was 99.63 % at the financial year end. The actual percentage of the benchmark with a proprietary sustainability score was 98.83 %. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a proprietary sustainability score was	99.63%	99.04%	98.85%
The actual percentage of the benchmark with a proprietary sustainability score was	98.83%	97.1%	96.49%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
ASML HOLDING NV	MANUFACTURING	2.89 %	Netherlands
SAP SE	INFORMATION AND COMMUNICATION	2.37 %	Germany
SIEMENS AG-REG	MANUFACTURING	1.90 %	Germany

MUENCHENER RUECKVER AG-REG	FINANCIAL AND INSURANCE ACTIVITIES	1.03 %	Germany
ENEL SPA	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	1.01 %	Italy
AIR LIQUIDE SA	MANUFACTURING	0.99 %	France

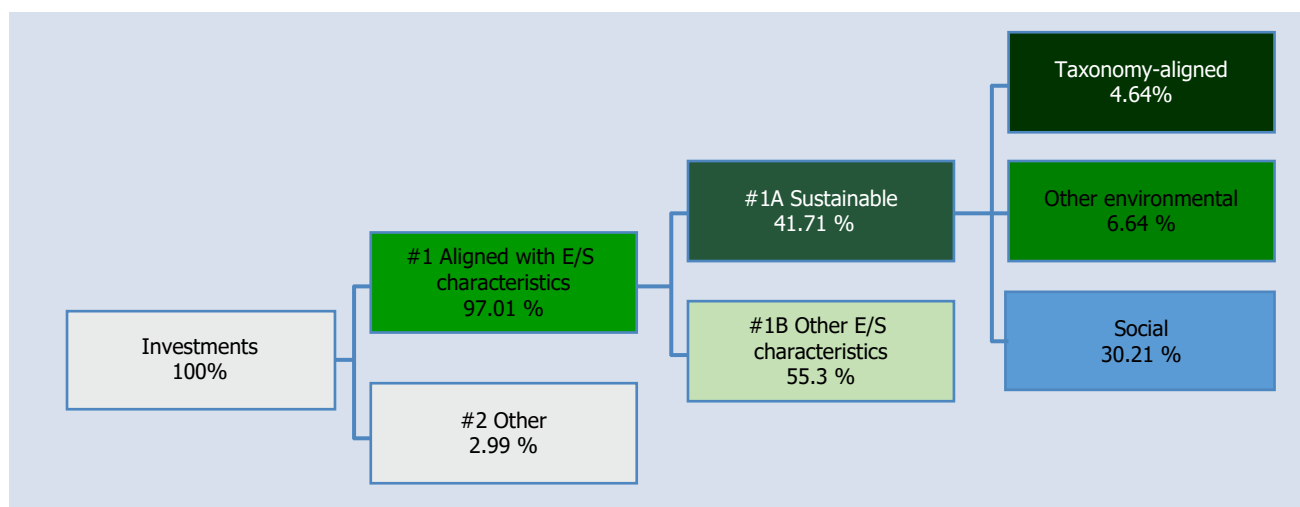

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	1.71 %
B07	Mining of metal ores	1.71 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 35.49 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	4.31 %
Climate change adaptation	0.01 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.12 %
Enabling activities	3.01 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	4.64 %	2.67 %	2.35 %
Capex	7.83 %	5 %	0 %
Opex	5.99 %	3.88 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	7.19 %	4.48 %	4.3 %
Capex	12.14 %	8.38 %	0 %
Opex	9.29 %	6.51 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 6.64% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 30.21% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Euro Bond

Legal entity identifier: 4JPESYE6XYML1UXRJ264

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 30.37% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Euro Bond (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- Further, the Investment Manager adhered to a minimum percentage of 3.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does

this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The actual percentage of the portfolio with a proprietary sustainability score of 1 or more was 93.22 % at the financial year end. The actual percentage of the benchmark with a proprietary sustainability score was 90.72 %. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- **... and compared to previous periods?**

On 02.06.2023, the sustainable investment approach was changed from the Climate Engagement with Outcome (CEWO) to another E/S Strategy (SRI BIC). The indicators for measuring compliance with ecological and social characteristics between the investment approaches are only partially comparable. If the indicators for the CEWO are not comparable, they are not included in the table. For information on the performance of the strategy, please refer to the 2023 year-end report (available upon request).

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a proprietary sustainability score was	93.22%	95.61%	95.74%
The actual percentage of the benchmark with a proprietary sustainability score was	90.72%	95.07%	93.5%
The response rate (companies replied to the engagement questionnaire) was*	-	-	94%
Change of the carbon footprint**	-	-	-7.7%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

* The top 10 carbon emitting issuers are determined periodically. Over the reference dates Q4/2020, Q1/2022 and Q1/2023 the 17 emitters were identified.

** Change of the CO2 emissions of the year 2019 compared to 2021.

All investments in sovereign issuers were evaluated with an SRI rating until the sustainable investment approach was changed.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 51.75 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

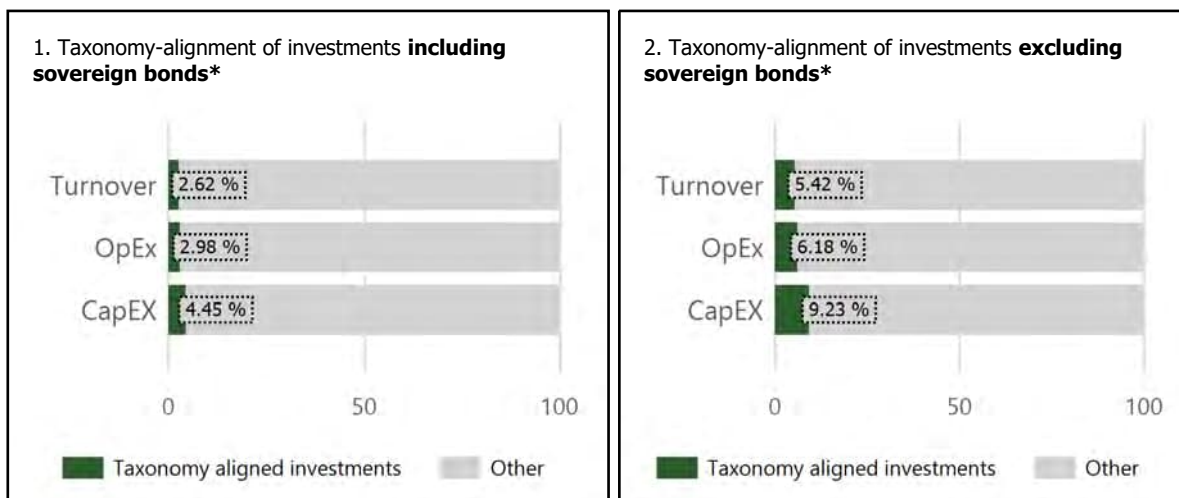

Yes

In fossil gas In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	3.06 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.31 %
Enabling activities	1.41 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	2.62 %	2.33 %	1.66 %
Capex	4.45 %	3.34 %	0 %
Opex	2.98 %	2.73 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	5.42 %	4.72 %	4.2 %
Capex	9.23 %	6.77 %	0 %
Opex	6.18 %	5.52 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 9.16% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 18.52% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager’s engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI’s strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI’s holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks
are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Product name:

Allianz Euro Bond Short Term 1-3 Plus

Legal entity identifier: 5493007JLYJUUN37K611

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 23.91% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Euro Bond Short Term 1-3 Plus (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- Further, the Investment Manager adhered to a minimum percentage of 1.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does

this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The actual percentage of the portfolio with a proprietary sustainability score of 1 or more was 98.65 % at the financial year end. The actual percentage of the benchmark with a proprietary sustainability score was 100 %. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- **... and compared to previous periods?**

On 29.12.2022, the sustainable investment approach was changed from the Climate Engagement with Outcome (CEWO) to another E/S Strategy (SRI BIC). The indicators for measuring compliance with ecological and social characteristics between the investment approaches are only partially comparable. If the indicators for the CEWO are not comparable, they are not included in the table. For information on the performance of the strategy, please refer to the 2022 year-end report (available upon request).

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a proprietary sustainability score was	98.65%	96.96%	96.03%
The actual percentage of the benchmark with a proprietary sustainability score was	100%	100%	100%
The response rate (companies replied to the engagement questionnaire) was*	-	-	100%
Change of the carbon footprint**	-	-	-14.7%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

* The top 10 carbon emitting issuers are determined periodically. Over the two reference dates Q4/2020 and Q1/2022 the 13 emitters were identified.

** Change of the CO2 emissions of the year 2019 compared to 2021.

All investments in sovereign issuers were evaluated with an SRI rating until the sustainable investment approach was changed.

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 61.35 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Climate change mitigation	1.75 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.21 %
Enabling activities	0.77 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	1.53 %	1.71 %	1.14 %
Capex	2.11 %	2.35 %	0 %
Opex	1.3 %	2.34 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	3.97 %	4.46 %	3.6 %
Capex	5.47 %	6.12 %	0 %
Opex	3.38 %	6.09 %	0 %

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 5.1% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 17.09% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Euro Credit SRI

Legal entity identifier: 529900VVLGKMM7VV9P20

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 57.53% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Euro Credit SRI (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- Further, the Investment Manager adhered to a minimum percentage of 15.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does

Sustainability indicators
measure how the
environmental or social
characteristics promoted
by the financial product
are attained.

this financial product follow?" in the pre-contractual document.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria except for one sub criterion were adhered to throughout the financial year 2025. The one sub criterion which was not adhered to for a certain time period led to investment limit violations. These violations were resolved according to the internal policies of the Investment Manager. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 1% of their revenues from exploration, mining, extraction, distribution or refining of thermal coal,
- active within the utility sector and generating more than 20% of their revenues from coal,
- deriving more than 10% of their revenues from the exploration, extraction, distribution or refining of oil fuels,
- deriving more than 50% of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels,
- deriving more than 50% of their revenues from electricity generation with a GHG intensity of more than 100 g CO₂ e/kWh,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The investment universe has been reduced by excluding at least 20.00% of the total number of potential issuers compared to the investible issuers according to the Sub-Fund's general investment strategy as described in the prospectus.

- The actual percentage of the portfolio with a proprietary sustainability score of 2 or more was 96.95 % at the financial year end. The actual percentage of the benchmark with a proprietary sustainability score was 88.71 %. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- ... and compared to previous periods?

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a proprietary sustainability score was	96.95%	95.15%	95.21%
The actual percentage of the benchmark with a proprietary sustainability score was	88.71%	86.01%	83.6%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria except for one sub criterion were adhered to throughout the financial year 2025. The one sub criterion which was not adhered to for a certain time period led to investment limit violations. These violations were resolved according to the internal policies of the Investment Manager.		

- What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub- sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0.49 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	8.94 %
Climate change adaptation	0.01 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.26 %
Enabling activities	3.17 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	9.59 %	6.4 %	3.65 %
Capex	11.94 %	11.75 %	0 %
Opex	9.53 %	8.94 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	9.63 %	6.55 %	3.67 %
Capex	12 %	12.03 %	0 %
Opex	9.58 %	9.15 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 12.79% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 35.05% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Euro Government Bond

Legal entity identifier: 529900Z9QTQFM4SHJL76

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 7.73% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Euro Government Bond (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- Further, the Investment Manager adhered to a minimum percentage of 1.00% of Sustainable Investments.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund 's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 10% of their revenue from thermal coal extraction,

- active within the utility sector and generating more than 20% of their revenues from coal,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The actual percentage of the portfolio with a proprietary sustainability score of 2 or more was 97.87 % at the financial year end. The actual percentage of the benchmark with a proprietary sustainability score was 100 %. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

The binding elements except for one criterion were adhered to throughout the financial year 2025. The criterion which was not adhered to for a certain time period led to an investment limit violation. This violation was resolved according to the internal policies of the Investment Manager.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a proprietary sustainability score was	97.87%	99.83%	99.31%
The actual percentage of the benchmark with a proprietary sustainability score was	100%	100%	100%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
BUONI POLIENNALI DEL TES 10Y FIX 2.050% 01.08.2027	Administration of the State and the economic and social policy of the community (O84.1)	3.42 %	Italy

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
H	TRANSPORTATION AND STORAGE	0.12 %
H49	Land transport and transport via pipelines	0.12 %
K	FINANCIAL AND INSURANCE ACTIVITIES	6.81 %
K64	Financial service activities, except insurance and pension funding	5.83 %
K66	Activities auxiliary to financial services and insurance activities	0.97 %
O	PUBLIC ADMINISTRATION AND DEFENCE; COMPULSORY SOCIAL SECURITY	92.77 %
O84	Public administration and defence; compulsory social security, from which:	92.77 %
O84.1	Administration of the State and the economic and social policy of the community	92.77 %
U	ACTIVITIES OF EXTRATERRITORIAL ORGANISATIONS AND BODIES	0.33 %
U99	ACTIVITIES OF EXTRATERRITORIAL ORGANISATIONS AND BODIES	0.33 %
Other	NOT SECTORIZED	-0.02 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 94.57 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

- **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?**

Yes

In fossil gas

In nuclear energy

No

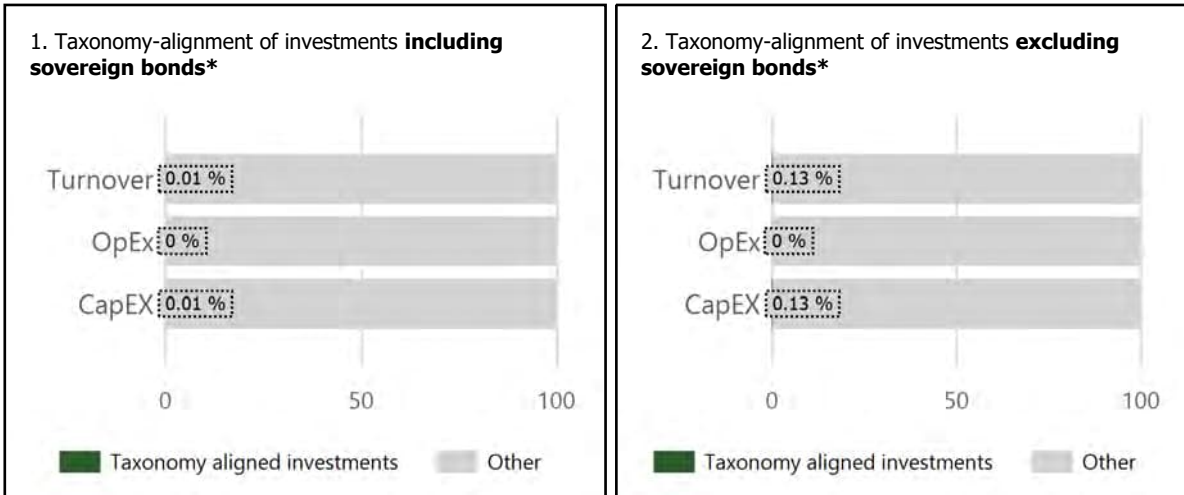

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.01 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	0.01 %	0.21 %	0.29 %
Capex	0.01 %	0.11 %	0 %
Opex	0 %	0.1 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	0.13 %	1.91 %	2.52 %
Capex	0.13 %	1 %	0 %
Opex	0 %	0.89 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 6.2% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 1.52% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these

investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Euro High Yield Bond

Legal entity identifier: IS7IKH6HMU9CTMM3VM48

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 35.8% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Euro High Yield Bond (the "Sub-Fund") promoted environmental and social characteristics as well as the management of greenhouse gas ("GHG") intensity. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed investments (excluded cash and derivatives) according to the greenhouse gas ("GHG") emissions of investee companies as far as such data was available. Based on this, the Investment Manager managed the Sub-Fund in a way that the GHG intensity of the portfolio was 20.00% lower than the GHG intensity of the Sub-Fund's benchmark. GHG intensity was defined as GHG emissions (scope 1 and 2) per million USD sales of the issuer. GHG emissions per million USD sales was used, as this metrics allows to differentiate between more and less energy efficient issuers. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio GHG intensity data must be available.
- Further, the Investment Manager adhered to a minimum percentage of 5.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

A reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund 's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 10% of their revenue from thermal coal extraction,

- active within the utility sector and generating more than 20% of their revenues from coal,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio which is covered by GHG intensity data was 71.27 %. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual GHG intensity of the Sub-Fund's portfolio was 39.25 % lower than the GHG intensity of the benchmark at the relevant financial year. The calculation of the GHG intensity is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

The binding elements except for one criterion were adhered to throughout the financial year 2025. The criterion which was not adhered to for a certain time period led to an investment limit violation. This violation was resolved according to the internal policies of the Investment Manager.

- **... and compared to previous periods?**

On 02.06.2023, the sustainable investment approach was changed from the Climate Engagement with Outcome (CEWO) to another E/S Strategy (KPI Strategy - Relative). The indicators for measuring compliance with ecological and social characteristics between the investment approaches are only partially comparable. If the indicators for the CEWO are not comparable, they are not included in the table. For information on the performance of the strategy, please refer to the 2023 year-end report (available upon request).

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio which is covered by GHG intensity data was	71.27%	72.9%	79.76%
The actual average GHG intensity of the Sub-Fund's portfolio vs average GHG intensity of the benchmark was lower by	39.25%	24.78%	33.82%
The response rate (companies replied to the engagement questionnaire) was*	-	-	100%
Change of the carbon footprint**	-	-	10.1%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

* The top 10 carbon emitting issuers are determined periodically. Over the reference dates Q4/2020, Q1/2022 and Q1/2023 the 14 emitters were identified.

** Change of the CO2 emissions of the year 2019 compared to 2021.

All investments in sovereign issuers were evaluated with an SRI rating until the sustainable investment approach was changed.

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	0.86 %

S	OTHER SERVICE ACTIVITIES	0.47 %
S96	Other personal service activities	0.47 %
Other	NOT SECTORIZED	11.63 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds.

The share of investments in sovereigns was 0.97 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	4.69 %
Climate change adaptation	0.21 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.97 %
Enabling activities	1.91 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	4.71 %	4.44 %	3.28 %
Capex	5.88 %	5.76 %	0 %
Opex	4.54 %	4.97 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	4.76 %	4.56 %	3.46 %
Capex	5.93 %	5.91 %	0 %
Opex	4.58 %	5.11 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 9.51% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 21.45% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Investment Manager has assigned the index "ICE BOFAML Euro High Yield BB-B Constrained" as the Sub-Fund's benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by managing the GHG intensity so that it will be continuously 20% lower than the GHG intensity of the benchmark as described in the section "What investment strategy does this financial product follow?".

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did the reference benchmark differ from a broad market index?

The Sub-Fund's benchmark is a market index.

- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

The actual GHG intensity of the Sub-Fund's portfolio was 39.25 % lower than the GHG intensity of the benchmark at the relevant financial year end. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- How did this financial product perform compared with the reference benchmark?

01/10/2024 - 30/09/2025	Allianz Euro High Yield Bond	Benchmark	Active Return
Performance %	6.19	6.78	-0.59

- How did this financial product perform compared with the broad market index?

01/10/2024 - 30/09/2025	Allianz Euro High Yield Bond	Benchmark	Active Return
Performance %	6.19	6.78	-0.59

Product name:

Allianz Euro High Yield Defensive

Legal entity identifier: 529900SMJDSY6ZOGRB53

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 30.09% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Euro High Yield Defensive (the "Sub-Fund") promoted a broad range of environmental and social characteristics. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by, excluded direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager adhered to a minimum percentage of 20.00% of Sustainable Investments. Sustainable Investments include a broad range of environmental and social topics, for which the Investment Manager used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the EU Taxonomy objectives. The proprietary methodology to assess the environmental and social contribution was described in the section "What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?" and contained an assessment of the positive contribution to environmental and social contributions as well as an assessment to avoid significant harm to any environmental or social objective.
- Further, the Investment Manager committed to invest minimum 60% of Sub-Fund's net asset value into issuers which, as assessed by the Investment Manager, were not considered to significantly harm any environmental or social objective according to the Sustainable Investment methodology. The Investment Manager adhered to a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 10% of their revenue from thermal coal extraction,

- active within the utility sector and generating more than 20% of their revenues from coal,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of assets invested in issuers which have been assessed according to the Sustainable Investments methodology at the end of the financial year was 76.34 %. The calculation of the Sustainable Investments methodology is described below in the sections "What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?" and "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual Sustainable Investment share at the end of the financial year was 30.09 %.

- The actual percentage of investments that pass the assessment to significantly harm environmental or social objectives at the end of the financial year was 0 %.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of assets invested in issuers which have been assessed according to the Sustainable Investments methodology at the end of the financial year was	76.34%	65.9%	71.3%
The actual weighted average sustainable investment share of Sub-Fund Assets was	30.09%	37.93%	35.77%
The actual percentage of investments that pass the assessment to not significantly harm environmental or social objectives at the end of the financial year was	0%	3.02%	1.53%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	0.85 %
B06	Extraction of crude petroleum and natural gas	0.26 %

Other	NOT SECTORIZED	15.65 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 6.19 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

- [Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?](#)

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	6.18 %
Climate change adaptation	0.25 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	1.42 %
Enabling activities	2.71 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	6.6 %	7.29 %	3.59 %
Capex	7.97 %	9.92 %	0 %
Opex	7.22 %	8.61 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	7.04 %	7.58 %	4 %
Capex	8.49 %	10.31 %	0 %
Opex	7.7 %	8.94 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 11.45% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 12.04% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- [How did the reference benchmark differ from a broad market index?](#)

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- [How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?](#)

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- [How did this financial product perform compared with the reference benchmark?](#)

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did this financial product perform compared with the broad market index?

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Product name:

Allianz Euro Inflation-linked Bond

Legal entity identifier: 52990048RHLMIXREUF14

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 1.62% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Euro Inflation-linked Bond (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The actual percentage of the portfolio with a proprietary sustainability score of 2 or more was 100 % at the financial year end. The actual percentage of the benchmark with a proprietary sustainability score was 100 %. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a proprietary sustainability score was	100%	99.01%	98.08%
The actual percentage of the benchmark with a proprietary sustainability score was	100%	100%	100%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
BUONI POLIENNALI DEL TES CPI I/L FIX 1.300% 15.05.2028	Administration of the State and the economic and social policy of the community (O84.1)	6.87 %	Italy

BUONI POLIENNALI DEL TES CPI I/L FIX 2.550% 15.09.2041	Administration of the State and the economic and social policy of the community (O84.1)	4.43 %	Italy

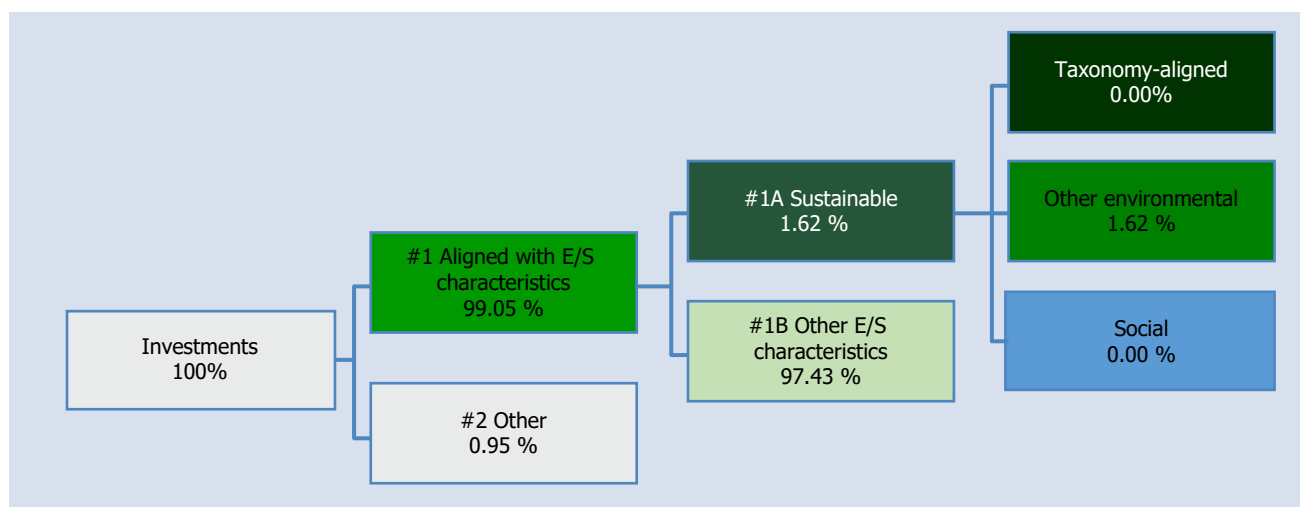

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
K	FINANCIAL AND INSURANCE ACTIVITIES	0.00 %
K66	Activities auxiliary to financial services and insurance activities	0.00 %
O	PUBLIC ADMINISTRATION AND DEFENCE; COMPULSORY SOCIAL SECURITY	99.05 %
O84	Public administration and defence; compulsory social security, from which:	99.05 %
O84.1	Administration of the State and the economic and social policy of the community	99.05 %
Other	NOT SECTORIZED	0.95 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 99.05 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	0.00 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	0.00 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	0 %	0 %	0 %
Capex	0 %	0 %	0 %
Opex	0 %	0 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	0 %	0 %	0 %
Capex	0 %	0 %	0 %
Opex	0 %	0 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 1.62% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 0% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Euroland Equity Growth

Legal entity identifier: 549300P15C6H38NBO527

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 57.4% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Euroland Equity Growth (the "Sub-Fund") promoted environmental and social characteristics as well as the management of greenhouse gas ("GHG") intensity. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed investments (excluded cash and derivatives) according to the greenhouse gas ("GHG") emissions of investee companies as far as such data was available. Based on this, the Investment Manager managed the Sub-Fund in a way that the GHG intensity of the portfolio was 20.00% lower than the GHG intensity of the Sub-Fund's benchmark. GHG intensity was defined as GHG emissions (scope 1 and 2) per million USD sales of the issuer. GHG emissions per million USD sales was used, as this metrics allows to differentiate between more and less energy efficient issuers. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio GHG intensity data must be available.

A reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio which is covered by GHG intensity data was 100.05%. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual GHG intensity of the Sub-Fund's portfolio was 27.66% lower than the GHG intensity of the benchmark at the relevant financial year. The calculation of the GHG intensity is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **... and compared to previous periods?**

On 28.09.2023, the sustainable investment approach was changed from the Climate Engagement with Outcome (CEWO) to another E/S Strategy (KPI Strategy - Relative). The indicators for measuring compliance with ecological and social characteristics between the investment approaches are only partially comparable. If the indicators for the CEWO are not comparable, they are not included in the table. For information on the performance of the strategy, please refer to the 2023 year-end report (available upon request).

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio which is covered by GHG intensity data was	100.05%	99.79%	98.45%
The actual average GHG intensity of the Sub-Fund's portfolio vs average GHG intensity of the benchmark was lower by	27.66%	29.5%	38.87%
The response rate (companies replied to the engagement questionnaire) was*	-	-	100%
Change of the carbon footprint**	-	-	21.2%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

* The top 10 carbon emitting issuers are determined periodically. Over the reference dates Q4/2020, Q1/2022 and Q1/2023 the 14 emitters were identified.

** Change of the CO2 emissions of the year 2019 compared to 2021.

All investments in sovereign issuers were evaluated with an SRI rating until the sustainable investment approach was changed.

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
ASML HOLDING NV	MANUFACTURING	9.19 %	Netherlands
SAP SE	INFORMATION AND COMMUNICATION	7.43 %	Germany
HERMES INTERNATIONAL	MANUFACTURING	7.22 %	France
LVMH MOET HENNESSY LOUIS VUI	MANUFACTURING	6.16 %	France
SCOUT24 SE	INFORMATION AND COMMUNICATION	4.65 %	Germany
KINGSPAN GROUP PLC	MANUFACTURING	4.49 %	Ireland
ADYEN NV	INFORMATION AND COMMUNICATION	4.41 %	Netherlands
L'OREAL	MANUFACTURING	4.40 %	France
NEMETSCHEK SE	INFORMATION AND COMMUNICATION	4.36 %	Germany

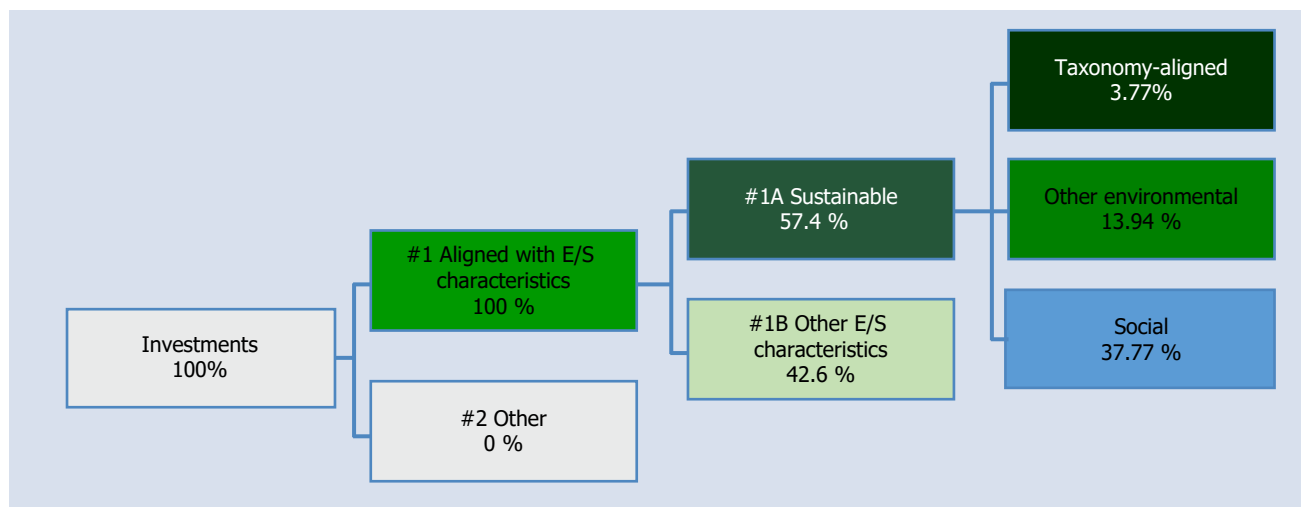

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	2.30 %
B09	Mining support service activities	2.30 %
C	MANUFACTURING	55.15 %
C14	Manufacture of wearing apparel	6.00 %
C15	Manufacture of leather and related products	9.80 %
C20	Manufacture of chemicals and chemical products	7.70 %
C23	Manufacture of other non-metallic mineral products	1.91 %
C25	Manufacture of fabricated metal products, except machinery and equipment	4.15 %
C26	Manufacture of computer, electronic and optical products	6.98 %
C27	Manufacture of electrical equipment	3.88 %
C28	Manufacture of machinery and equipment n.e.c.	13.75 %
C29	Manufacture of motor vehicles, trailers and semi-trailers	0.98 %
G	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	3.28 %
G47	Retail trade, except of motor vehicles and motorcycles	3.28 %
H	TRANSPORTATION AND STORAGE	2.90 %
H51	Air transport	2.90 %
J	INFORMATION AND COMMUNICATION	29.20 %
J58	Publishing activities	18.53 %
J62	Computer programming, consultancy and related activities	6.41 %

K66	Activities auxiliary to financial services and insurance activities	1.71 %
M	PROFESSIONAL, SCIENTIFIC AND TECHNICAL ACTIVITIES	2.56 %
M72	Scientific research and development	2.56 %
N	ADMINISTRATIVE AND SUPPORT SERVICE ACTIVITIES	1.05 %
N82	Office administrative, office support and other business support activities	1.05 %
R	ARTS, ENTERTAINMENT AND RECREATION	1.86 %
R90	Creative, arts and entertainment activities	1.86 %
Other	NOT SECTORIZED	-0.02 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	3.56 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	4.02 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	3.77 %	0.43 %	4.58 %
Capex	8.19 %	2.94 %	0 %
Opex	4.75 %	0.55 %	0 %

Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	3.77 %	0.43 %	4.58 %
Capex	8.19 %	2.94 %	0 %
Opex	4.75 %	0.55 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 13.94% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 37.77% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI 's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Investment Manager has assigned the index "S&P Eurozone Large Mid Cap Growth Total Return Net" as the Sub-Fund's benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by managing the GHG intensity so that it will be continuously 20% lower than the GHG intensity of the benchmark as described in the section "What investment strategy does this financial product follow?".

- **How did the reference benchmark differ from a broad market index?**

The Sub-Fund's benchmark is a market index.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The actual GHG intensity of the Sub-Fund's portfolio was 27.66 % lower than the GHG intensity of the benchmark at the relevant financial year end. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **How did this financial product perform compared with the reference benchmark?**

01/10/2024 - 30/09/2025	Allianz Euroland Equity Growth	Benchmark	Active Return
Performance %	-6.97	10.51	-17.48

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did this financial product perform compared with the broad market index?

01/10/2024 - 30/09/2025	Allianz Euroland Equity Growth	Benchmark	Active Return
Performance %	-6.97	10.51	-17.48

Product name:

Allianz Europe Equity Growth

Legal entity identifier: 549300N3S28ICP3HG051

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 50.47% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Europe Equity Growth (the "Sub-Fund") promoted environmental and social characteristics as well as the management of greenhouse gas ("GHG") intensity. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed investments (excluded cash and derivatives) according to the greenhouse gas ("GHG") emissions of investee companies as far as such data was available. Based on this, the Investment Manager managed the Sub-Fund in a way that the GHG intensity of the portfolio was 20.00% lower than the GHG intensity of the Sub-Fund's benchmark. GHG intensity was defined as GHG emissions (scope 1 and 2) per million USD sales of the issuer. GHG emissions per million USD sales was used, as this metrics allows to differentiate between more and less energy efficient issuers. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio GHG intensity data must be available.

A reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio which is covered by GHG intensity data was 99.67%. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual GHG intensity of the Sub-Fund's portfolio was 64.75% lower than the GHG intensity of the benchmark at the relevant financial year. The calculation of the GHG intensity is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **... and compared to previous periods?**

On 28.09.2023, the sustainable investment approach was changed from the Climate Engagement with Outcome (CEWO) to another E/S Strategy (KPI Strategy - Relative). The indicators for measuring compliance with ecological and social characteristics between the investment approaches are only partially comparable. If the indicators for the CEWO are not comparable, they are not included in the table. For information on the performance of the strategy, please refer to the 2023 year-end report (available upon request).

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio which is covered by GHG intensity data was	99.67%	99.57%	99.35%
The actual average GHG intensity of the Sub-Fund's portfolio vs average GHG intensity of the benchmark was lower by	64.75%	69.16%	76.88%
The response rate (companies replied to the engagement questionnaire) was*	-	-	100%
Change of the carbon footprint**	-	-	19.5%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

* The top 10 carbon emitting issuers are determined periodically. Over the reference dates Q4/2020, Q1/2022 and Q1/2023 the 15 emitters were identified.

** Change of the CO2 emissions of the year 2019 compared to 2021.

All investments in sovereign issuers were evaluated with an SRI rating until the sustainable investment approach was changed.

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
ASML HOLDING NV	MANUFACTURING	8.25 %	Netherlands
SAP SE	INFORMATION AND COMMUNICATION	5.87 %	Germany
NOVO NORDISK A/S-B	MANUFACTURING	3.83 %	Denmark
DSV A/S	TRANSPORTATION AND STORAGE	3.75 %	Denmark

COMPASS GROUP	ACCOMMODATION AND FOOD SERVICE ACTIVITIES	2.86 %	United Kingdom
LVMH MOET HENNESSY LOUIS VUI	MANUFACTURING	2.79 %	France
DASSAULT SYSTEMES SE	INFORMATION AND COMMUNICATION	2.74 %	France

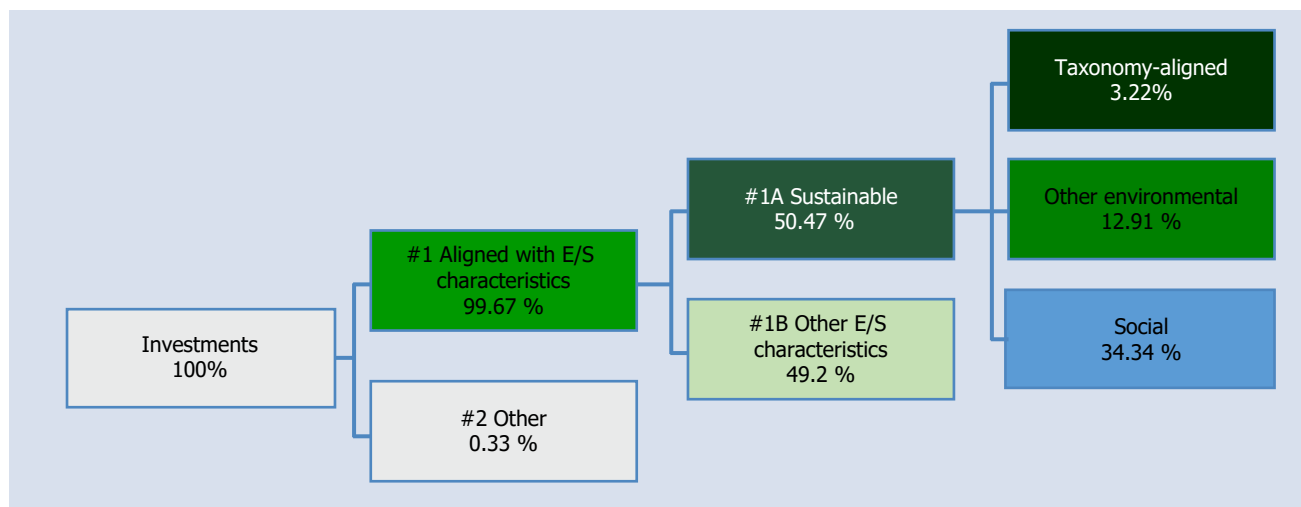

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	60.21 %
C10	Manufacture of food products	2.77 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

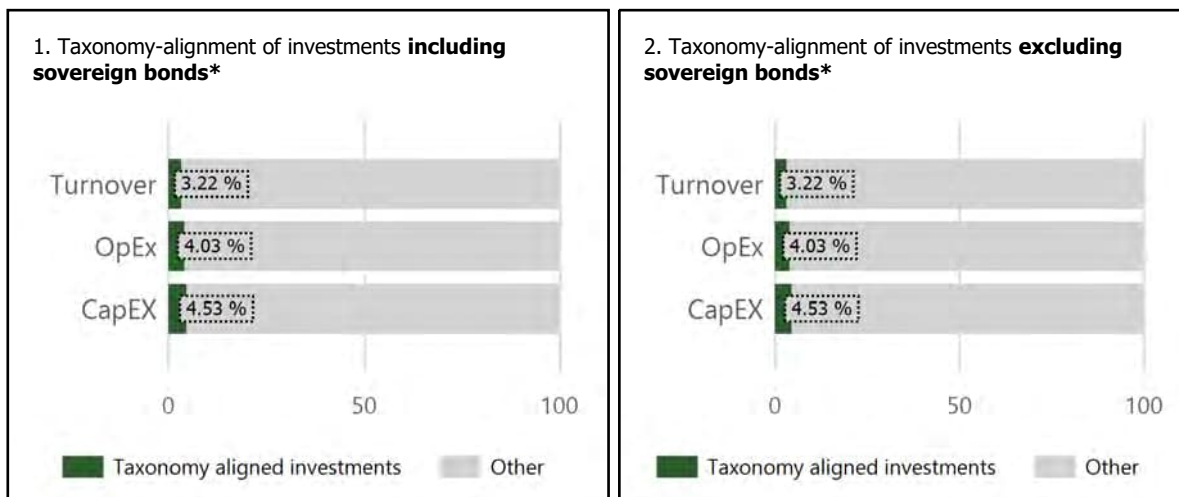

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	3.04 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.02 %
Enabling activities	3.35 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	3.22 %	0.37 %	3.04 %
Capex	4.53 %	1.24 %	0.03 %
Opex	4.03 %	0.24 %	0.01 %

Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	3.22 %	0.37 %	3.04 %
Capex	4.53 %	1.24 %	0.03 %
Opex	4.03 %	0.24 %	0.01 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 12.91% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 34.34% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI 's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Investment Manager has assigned the index "S&P Europe Large Cap Growth Total Return Net" as the Sub-Fund's benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by managing the GHG intensity so that it will be continuously 20% lower than the GHG intensity of the benchmark as described in the section "What investment strategy does this financial product follow?".

- **How did the reference benchmark differ from a broad market index?**

The Sub-Fund's benchmark is a market index.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The actual GHG intensity of the Sub-Fund's portfolio was 64.75 % lower than the GHG intensity of the benchmark at the relevant financial year end. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **How did this financial product perform compared with the reference benchmark?**

01/10/2024 - 30/09/2025	Allianz Europe Equity Growth	Benchmark	Active Return
Performance %	-12.83	2.06	-14.89

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did this financial product perform compared with the broad market index?

01/10/2024 - 30/09/2025	Allianz Europe Equity Growth	Benchmark	Active Return
Performance %	-12.83	2.06	-14.89

Product name:

Allianz Europe Equity Growth Select

Legal entity identifier: 549300UEVM0IKP1RGZ24

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 51.93% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Europe Equity Growth Select (the "Sub-Fund") promoted environmental and social characteristics as well as the management of greenhouse gas ("GHG") intensity. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed investments (excluded cash and derivatives) according to the greenhouse gas ("GHG") emissions of investee companies as far as such data was available. Based on this, the Investment Manager managed the Sub-Fund in a way that the GHG intensity of the portfolio was 20.00% lower than the GHG intensity of the Sub-Fund's benchmark. GHG intensity was defined as GHG emissions (scope 1 and 2) per million USD sales of the issuer. GHG emissions per million USD sales was used, as this metrics allows to differentiate between more and less energy efficient issuers. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio GHG intensity data must be available.

A reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio which is covered by GHG intensity data was 99.54%. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual GHG intensity of the Sub-Fund's portfolio was 50.81% lower than the GHG intensity of the benchmark at the relevant financial year. The calculation of the GHG intensity is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **... and compared to previous periods?**

On 28.09.2023, the sustainable investment approach was changed from the Climate Engagement with Outcome (CEWO) to another E/S Strategy (KPI Strategy - Relative). The indicators for measuring compliance with ecological and social characteristics between the investment approaches are only partially comparable. If the indicators for the CEWO are not comparable, they are not included in the table. For information on the performance of the strategy, please refer to the 2023 year-end report (available upon request).

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio which is covered by GHG intensity data was	99.54%	99.63%	99.57%
The actual average GHG intensity of the Sub-Fund's portfolio vs average GHG intensity of the benchmark was lower by	50.81%	63.37%	78.66%
The response rate (companies replied to the engagement questionnaire) was*	-	-	100%
Change of the carbon footprint**	-	-	22.1%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

* The top 10 carbon emitting issuers are determined periodically. Over the reference dates Q4/2020, Q1/2022 and Q1/2023 the 14 emitters were identified.

** Change of the CO2 emissions of the year 2019 compared to 2021.

All investments in sovereign issuers were evaluated with an SRI rating until the sustainable investment approach was changed.

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

How were the indicators for adverse impacts on sustainability factors taken into account?

PAI indicators were considered either as part of the application of the exclusion criteria or through thresholds on a sectorial or absolute basis. Significance thresholds have also been defined referring to qualitative or quantitative criteria.

Recognising the lack of data coverage for some of the PAI indicators, equivalent data points were used, when relevant, to assess PAI indicators when applying the DNSH assessment for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity investee and countries subject to social violations. In case of securities which finance specific projects contributing to environmental or social objectives equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
ASML HOLDING NV	MANUFACTURING	8.58 %	Netherlands
SAP SE	INFORMATION AND COMMUNICATION	6.69 %	Germany
DSV A/S	TRANSPORTATION AND STORAGE	4.26 %	Denmark
NOVO NORDISK A/S-B	MANUFACTURING	4.18 %	Denmark
PARTNERS GROUP HOLDING AG	FINANCIAL AND INSURANCE ACTIVITIES	3.88 %	Switzerland
ASSA ABLOY AB-B	ADMINISTRATIVE AND SUPPORT SERVICE ACTIVITIES	3.83 %	Sweden
SIKA AG-REG	MANUFACTURING	3.46 %	Switzerland
L'OREAL	MANUFACTURING	3.40 %	France
ATLAS COPCO AB-A SHS	MANUFACTURING	3.38 %	Sweden
ADYEN NV	INFORMATION AND COMMUNICATION	3.21 %	Netherlands
ADIDAS AG	MANUFACTURING	3.14 %	Germany
LVMH MOET HENNESSY LOUIS VUI	MANUFACTURING	3.13 %	France

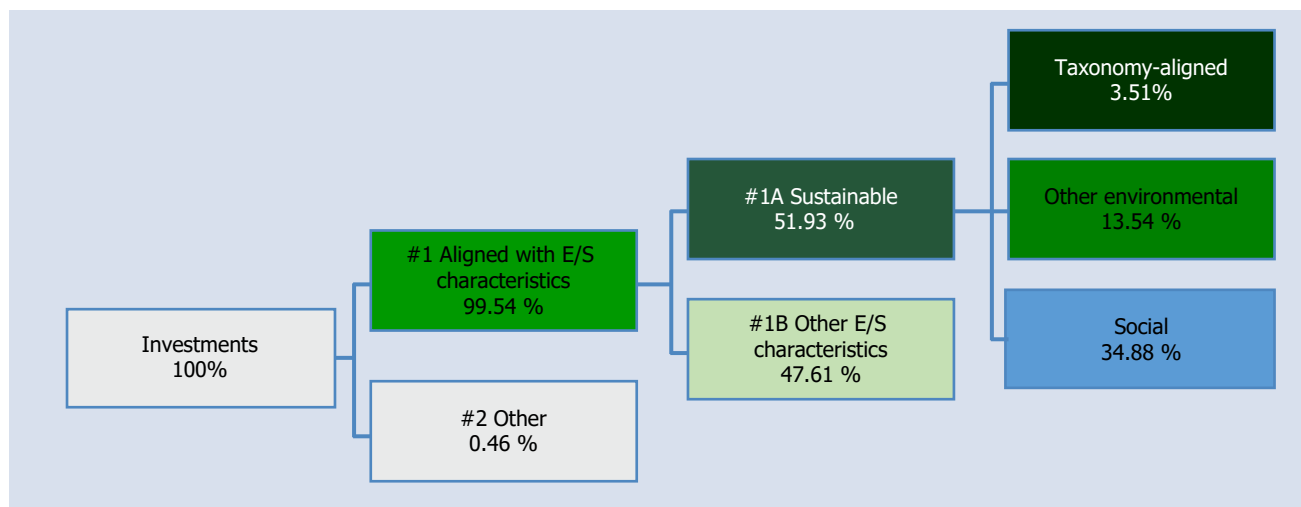

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	59.91 %
C10	Manufacture of food products	2.99 %
C14	Manufacture of wearing apparel	3.09 %
C15	Manufacture of leather and related products	5.19 %
C20	Manufacture of chemicals and chemical products	6.36 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	1.49 %
C22	Manufacture of rubber and plastic products	2.48 %
C25	Manufacture of fabricated metal products, except machinery and equipment	4.91 %
C26	Manufacture of computer, electronic and optical products	8.83 %
C27	Manufacture of electrical equipment	4.00 %
C28	Manufacture of machinery and equipment n.e.c.	16.14 %
C29	Manufacture of motor vehicles, trailers and semi-trailers	1.18 %
C32	Other manufacturing	3.23 %
H	TRANSPORTATION AND STORAGE	3.26 %
H52	Warehousing and support activities for transportation	3.26 %
I	ACCOMMODATION AND FOOD SERVICE ACTIVITIES	6.25 %
I55	Accommodation	2.90 %

K66	Activities auxiliary to financial services and insurance activities	5.43 %
M	PROFESSIONAL, SCIENTIFIC AND TECHNICAL ACTIVITIES	1.54 %
M72	Scientific research and development	1.54 %
N	ADMINISTRATIVE AND SUPPORT SERVICE ACTIVITIES	5.77 %
N80	Security and investigation activities	3.62 %
N82	Office administrative, office support and other business support activities	2.16 %
Other	NOT SECTORIZED	0.47 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	3.32 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.02 %
Enabling activities	3.66 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	3.51 %	0.34 %	3.27 %
Capex	4.85 %	1.16 %	0.04 %
Opex	4.32 %	0.21 %	0.01 %

Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	3.51 %	0.34 %	3.27 %
Capex	4.85 %	1.16 %	0.04 %
Opex	4.32 %	0.21 %	0.01 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 13.54% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 34.88% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI 's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Investment Manager has assigned the index "S&P Europe Large Cap Growth Total Return Net" as the Sub-Fund's benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by managing the GHG intensity so that it will be continuously 20% lower than the GHG intensity of the benchmark as described in the section "What investment strategy does this financial product follow?".

- **How did the reference benchmark differ from a broad market index?**

The Sub-Fund's benchmark is a market index.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The actual GHG intensity of the Sub-Fund's portfolio was 50.81 % lower than the GHG intensity of the benchmark at the relevant financial year end. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **How did this financial product perform compared with the reference benchmark?**

01/10/2024 - 30/09/2025	Allianz Europe Equity Growth Select	Benchmark	Active Return
Performance %	-13.2	0.3	-13.50

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Europe Equity SRI

Legal entity identifier: 529900YVCW4Q10X95C76

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 64.13% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Europe Equity SRI (the "Sub-Fund") promoted a broad range of environmental, human rights, governance, and/or business behaviour characteristics (the last characteristic did not apply for financial instruments issued by a sovereign entity). The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager selected from the remaining investment universe those corporate issuers that performed better within their sector with respect to sustainability aspects. With respect to sovereign issuers those issuers that generally performed better with respect to sustainability aspects. The issuers were assigned an individual score by the investment manager. The score started at 0 (lowest) and ended at 4 (highest). The score was based on environmental, social, governance and business behaviour factors (business behaviour did not apply to sovereign issuers) and represented an internal assessment assigned to a corporate or sovereign issuer by the Investment Manager.
- Further, the Investment Manager adhered to a minimum percentage of 30.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does

this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 1% of their revenues from exploration, mining, extraction, distribution or refining of thermal coal,
- active within the utility sector and generating more than 20% of their revenues from coal,
- deriving more than 10% of their revenues from the exploration, extraction, distribution or refining of oil fuels,
- deriving more than 50% of their revenues from the exploration, extraction, manufacturing or distribution of gaseous fuels,
- deriving more than 50% of their revenues from electricity generation with a GHG intensity of more than 100 g CO₂ e/kWh,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

- The investment universe has been reduced by excluding at least 20.00% of the total number of potential issuers compared to the investible issuers according to the Sub-Fund's general investment strategy as described in the prospectus.

The actual percentage of the portfolio with a proprietary sustainability score of 2 or more was 100 % at the financial year end. The actual percentage of the benchmark with a proprietary sustainability score was 90.61 %. The scoring process is described within the section "What investment strategy does this financial product follow?" in the precontractual document of the Sub-Fund. The basis for the calculation is the Sub-Fund's net asset value except instruments that are not scored by nature, e.g., cash and deposits. Derivatives are generally not scored. Derivatives (other than credit default swaps), whose underlying is a single rated corporate issuer, are, however, generally scored. The size of the not scored part of the portfolio varies subject to the Sub-Fund's general investment strategy described in the prospectus.

- **... and compared to previous periods?**

On 27.03.2025, the sustainable investment approach was changed from the SRI BIC Type A to the SRI BIC. The indicators for measuring compliance with ecological and social characteristics between the investment approaches are only partially comparable. If the indicators for the SRI BIC Type A are not comparable, they are not included in the table. For information on the performance of the strategy, please refer to the 2025 year-end report (available upon request).

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio with a proprietary sustainability score was	100%	99.75%	102.5%
The actual percentage of the benchmark with a proprietary sustainability score was	90.61%	88.2%	93.15%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
SAP SE	INFORMATION AND COMMUNICATION	3.46 %	Germany
ROCHE HOLDING AG-GENUSSCHEIN	MANUFACTURING	3.03 %	USA
SIEMENS AG-REG	MANUFACTURING	3.00 %	Germany
BANCO SANTANDER SA	FINANCIAL AND INSURANCE ACTIVITIES	2.78 %	Spain
ALLIANZ SE-REG	FINANCIAL AND INSURANCE ACTIVITIES	2.78 %	Germany
ASML HOLDING NV	MANUFACTURING	2.76 %	Netherlands
UNILEVER PLC	MANUFACTURING	2.58 %	United Kingdom
SCHNEIDER ELECTRIC SE	MANUFACTURING	2.30 %	USA
AIR LIQUIDE SA	MANUFACTURING	2.29 %	France
RELX PLC	INFORMATION AND COMMUNICATION	2.12 %	United Kingdom
IBERDROLA SA	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	2.09 %	Spain
SOCIETE GENERALE SA	FINANCIAL AND INSURANCE ACTIVITIES	2.05 %	France
ASTRAZENECA PLC	MANUFACTURING	2.05 %	United Kingdom
ESSILORLUXOTTICA	MANUFACTURING	2.05 %	France
NOVO NORDISK A/S-B	MANUFACTURING	1.98 %	Denmark

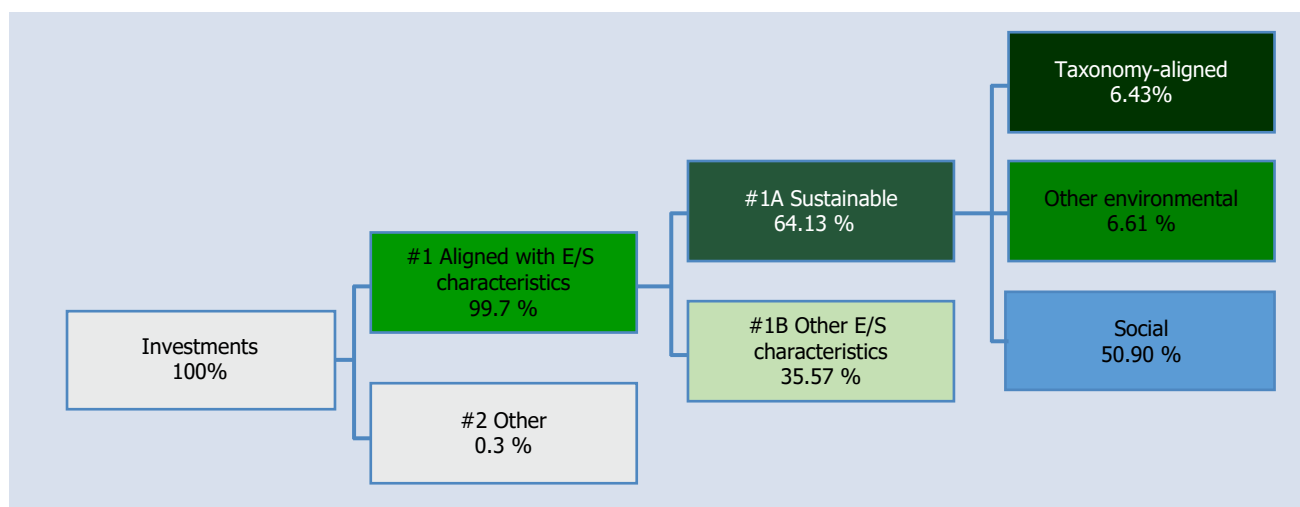

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	51.98 %
C10	Manufacture of food products	1.75 %
C11	Manufacture of beverages	1.43 %
C14	Manufacture of wearing apparel	2.07 %
C17	Manufacture of paper and paper products	0.61 %
C20	Manufacture of chemicals and chemical products	8.98 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	8.53 %
C22	Manufacture of rubber and plastic products	1.67 %
C23	Manufacture of other non-metallic mineral products	0.79 %
C26	Manufacture of computer, electronic and optical products	3.97 %
C27	Manufacture of electrical equipment	6.45 %
C28	Manufacture of machinery and equipment n.e.c.	6.91 %

C29	Manufacture of motor vehicles, trailers and semi-trailers	2.67 %
C30	Manufacture of other transport equipment	2.41 %
C32	Other manufacturing	3.75 %
D	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	3.88 %
D35	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	3.88 %
E	WATER SUPPLY; SEWERAGE, WASTE MANAGEMENT AND REMEDIATION ACTIVITIES	1.67 %
E37	Sewerage	1.67 %

L	REAL ESTATE ACTIVITIES	2.15 %
L68	REAL ESTATE ACTIVITIES	2.15 %
M	PROFESSIONAL, SCIENTIFIC AND TECHNICAL ACTIVITIES	2.29 %
M71	Architectural and engineering activities; technical testing and analysis	2.29 %
N	ADMINISTRATIVE AND SUPPORT SERVICE ACTIVITIES	1.36 %
N80	Security and investigation activities	1.36 %
Other	NOT SECTORIZED	0.30 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	6.10 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.05 %
Enabling activities	4.05 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	6.43 %	6.44 %	7.02 %
Capex	8.88 %	9.57 %	0 %
Opex	7.22 %	7.98 %	0 %

Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	6.43 %	6.44 %	7.02 %
Capex	8.88 %	9.57 %	0 %
Opex	7.22 %	7.98 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 6.61% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 50.9% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Europe Equity Value

Legal entity identifier: 222100SUFLTZGSP5T321

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 51.75% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Europe Equity Value (the "Sub-Fund") promoted environmental and social characteristics as well as the management of greenhouse gas ("GHG") intensity. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by excluding direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager assessed investments (excluded cash and derivatives) according to the greenhouse gas ("GHG") emissions of investee companies as far as such data was available. Based on this, the Investment Manager managed the Sub-Fund in a way that the GHG intensity of the portfolio was 20.00% lower than the GHG intensity of the Sub-Fund's benchmark. GHG intensity was defined as GHG emissions (scope 1 and 2) per million USD sales of the issuer. GHG emissions per million USD sales was used, as this metrics allows to differentiate between more and less energy efficient issuers. The Investment Manager had also set the requirement that for a certain % of the Sub-Fund's portfolio GHG intensity data must be available.
- Further, the Investment Manager adhered to a minimum percentage of 10.00% of Sustainable Investments and a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

A reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund 's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,
- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),
- deriving more than 10% of their revenue from thermal coal extraction,
- active within the utility sector and generating more than 20% of their revenues from coal,
- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of the portfolio which is covered by GHG intensity data was 95.8 %.

The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual GHG intensity of the Sub-Fund's portfolio was 50.78 % lower than the GHG intensity of the benchmark at the relevant financial year. The calculation of the GHG intensity is described below in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- **... and compared to previous periods?**

On 29.12.2022, the sustainable investment approach was changed from the Climate Engagement with Outcome (CEWO) to another E/S Strategy (KPI Strategy - Relative). The indicators for measuring compliance with ecological and social characteristics between the investment approaches are only partially comparable. If the indicators for the CEWO are not comparable, they are not included in the table. For information on the performance of the strategy, please refer to the 2022 year-end report (available upon request).

Indicator	09.2025	09.2024	09.2023
The actual percentage of the portfolio which is covered by GHG intensity data was	95.8%	98.5%	92.67%
The actual average GHG intensity of the Sub-Fund's portfolio vs average GHG intensity of the benchmark was lower by	50.78%	40.52%	21.03%
The response rate (companies replied to the engagement questionnaire) was*	-	-	94%
Change of the carbon footprint**	-	-	-4.7%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

* The top 10 carbon emitting issuers are determined periodically. Over the two reference dates Q4/2020 and Q1/2022 the 17 emitters were identified.

** Change of the CO2 emissions of the year 2019 compared to 2021.

All investments in sovereign issuers were evaluated with an SRI rating until the sustainable investment approach was changed.

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
ALLIANZ SE-REG	FINANCIAL AND INSURANCE ACTIVITIES	4.40 %	Germany
BANCO SANTANDER SA	FINANCIAL AND INSURANCE ACTIVITIES	4.35 %	Spain
SIEMENS AG-REG	MANUFACTURING	3.70 %	Germany
TOTALENERGIES SE	MANUFACTURING	3.65 %	France
INTESA SANPAOLO	FINANCIAL AND INSURANCE ACTIVITIES	3.64 %	Italy
LLOYDS BANKING GROUP PLC	FINANCIAL AND INSURANCE ACTIVITIES	3.52 %	United Kingdom
COMPAGNIE DE SAINT GOBAIN	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	3.25 %	France
ANHEUSER-BUSCH INBEV SA/NV	MANUFACTURING	3.25 %	Belgium
BP PLC	MANUFACTURING	3.09 %	USA
SANOFI	MANUFACTURING	2.97 %	USA
KBC GROUP NV	FINANCIAL AND INSURANCE ACTIVITIES	2.83 %	Belgium
DANONE	MANUFACTURING	2.79 %	France
CAIXABANK SA	FINANCIAL AND INSURANCE ACTIVITIES	2.76 %	Spain
SHELL PLC	MINING AND QUARRYING	2.75 %	USA
DCC PLC	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	2.53 %	United Kingdom

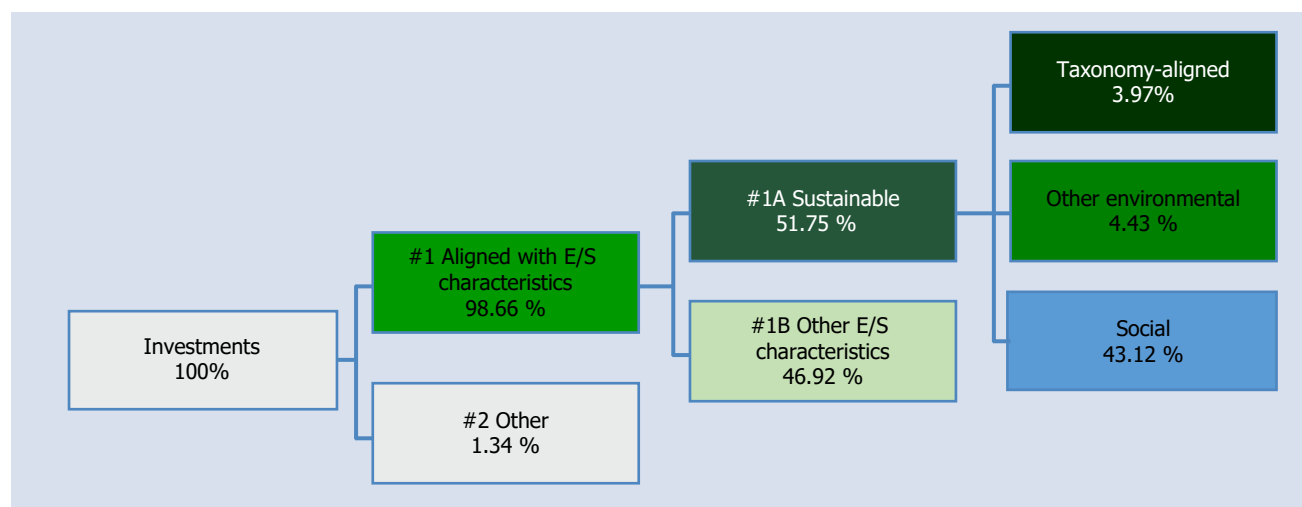

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	4.43 %
B06	Extraction of crude petroleum and natural gas	2.59 %
B07	Mining of metal ores	1.84 %
C	MANUFACTURING	35.20 %
C10	Manufacture of food products	3.77 %
C11	Manufacture of beverages	5.27 %
C19	Manufacture of coke and refined petroleum products	6.32 %
C20	Manufacture of chemicals and chemical products	3.82 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	5.35 %
C26	Manufacture of computer, electronic and optical products	2.22 %
C27	Manufacture of electrical equipment	3.52 %
C30	Manufacture of other transport equipment	2.49 %

C32	Other manufacturing	2.45 %
D	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	1.37 %
D35	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	1.37 %
G	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	7.33 %
G46	Wholesale trade, except of motor vehicles and motorcycles	6.54 %
G47	Retail trade, except of motor vehicles and motorcycles	0.80 %
H	TRANSPORTATION AND STORAGE	2.65 %
H51	Air transport	1.16 %
H53	Postal and courier activities	1.49 %
I	ACCOMMODATION AND FOOD SERVICE ACTIVITIES	2.59 %
I55	Accommodation	1.02 %
I56	Food and beverage service activities	1.58 %

M73	Advertising and market research	1.47 %
R	ARTS, ENTERTAINMENT AND RECREATION	1.36 %
R92	Gambling and betting activities	1.36 %
Other	NOT SECTORIZED	1.34 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

In fossil gas In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	3.67 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	0.00 %
Enabling activities	2.40 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	3.97 %	1.45 %	0.51 %
Capex	4.88 %	2.55 %	0 %
Opex	3.86 %	1.38 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	3.97 %	1.45 %	0.51 %
Capex	4.88 %	2.55 %	0 %
Opex	3.86 %	1.38 %	0 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 4.43% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 43.12% of Sub-Fund assets.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

Yes, the Investment Manager has assigned the index "MSCI Europe Value Total Return Net" as the Sub-Fund's benchmark. This benchmark is a market index. The Sub-Fund will promote environmental and social characteristics by managing the GHG intensity so that it will be continuously 20% lower than the GHG intensity of the benchmark as described in the section "What investment strategy does this financial product follow?".

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- How did the reference benchmark differ from a broad market index?

The Sub-Fund's benchmark is a market index.

- How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

The actual GHG intensity of the Sub-Fund's portfolio was 50.78 % lower than the GHG intensity of the benchmark at the relevant financial year end. The calculation of the GHG intensity is described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- How did this financial product perform compared with the reference benchmark?

01/10/2024 - 30/09/2025	Allianz Europe Equity Value	Benchmark	Active Return
Performance %	7.51	19.7	-12.19

- How did this financial product perform compared with the broad market index?

01/10/2024 - 30/09/2025	Allianz Europe Equity Value	Benchmark	Active Return
Performance %	7.51	19.7	-12.19

Product name:

Allianz Europe Mid Cap Equity

Legal entity identifier: 5493003SBYUCYZ0WXS18

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 56.03% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Europe Mid Cap Equity (the "Sub-Fund") promoted a broad range of environmental and social characteristics. The Sub-Fund did so by:

- As a first step promoted environmental and social characteristics, by, excluded direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.

- In a second step, the Investment Manager adhered to a minimum percentage of 30.00% of Sustainable Investments. Sustainable Investments include a broad range of environmental and social topics, for which the Investment Manager used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the EU Taxonomy objectives. The proprietary methodology to assess the environmental and social contribution was described in the section "What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?" and contained an assessment of the positive contribution to environmental and social contributions as well as an assessment to avoid significant harm to any environmental or social objective.

- Further, the Investment Manager committed to invest minimum 65% of Sub-Fund's net asset value into issuers which, as assessed by the Investment Manager, were not considered to significantly harm any environmental or social objective according to the Sustainable Investment methodology. The Investment Manager adhered to a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 10% of their revenue from thermal coal extraction,

- active within the utility sector and generating more than 20% of their revenues from coal,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of assets invested in issuers which have been assessed according to the Sustainable Investments methodology at the end of the financial year was 98.21 %. The calculation of the Sustainable Investments methodology is described below in the sections "What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?" and "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual Sustainable Investment share at the end of the financial year was 56.03 %.

- The actual percentage of investments that pass the assessment to not significantly harm environmental or social objectives at the end of the financial year was 4.55 %.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of assets invested in issuers which have been assessed according to the Sustainable Investments methodology at the end of the financial year was	98.21%	95.79%	92.71%
The actual weighted average sustainable investment share of Sub-Fund Assets was	56.03%	53.72%	41.25%
The actual percentage of investments that pass the assessment to not significantly harm environmental or social objectives at the end of the financial year was	4.55%	4.53%	14.63%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives—namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager's exclusions, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The following PAI indicators were considered through the direct measures outlined in the table below:

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impacted indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the financial product contained equity, debt and/or target funds. A portion of the financial product contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
ERSTE GROUP BANK AG	FINANCIAL AND INSURANCE ACTIVITIES	4.88 %	Austria
PRYSMIAN SPA	MANUFACTURING	4.31 %	Italy
ASR NEDERLAND NV	FINANCIAL AND INSURANCE ACTIVITIES	3.73 %	Netherlands
KONINKLIJKE KPN NV	INFORMATION AND COMMUNICATION	3.50 %	Netherlands
GAZTRANSPORT ET TECHNIGA SA	MINING AND QUARRYING	3.48 %	France
MOWI ASA	MANUFACTURING	3.43 %	Norway
NEXT PLC	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	3.23 %	United Kingdom
KION GROUP AG	MANUFACTURING	3.10 %	Germany
INTERCONTINENTAL HOTELS GROU	ACCOMMODATION AND FOOD SERVICE ACTIVITIES	2.80 %	United Kingdom
SCOUT24 SE	INFORMATION AND COMMUNICATION	2.76 %	Germany
FINECOBANK SPA EQ0000000019705819	FINANCIAL AND INSURANCE ACTIVITIES	2.67 %	Italy
BE SEMICONDUCTOR INDUSTRIES	MANUFACTURING	2.56 %	Netherlands
DCC PLC	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	2.48 %	United Kingdom
INFORMA PLC	INFORMATION AND COMMUNICATION	2.43 %	United Kingdom
ZALANDO SE	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	2.38 %	Germany

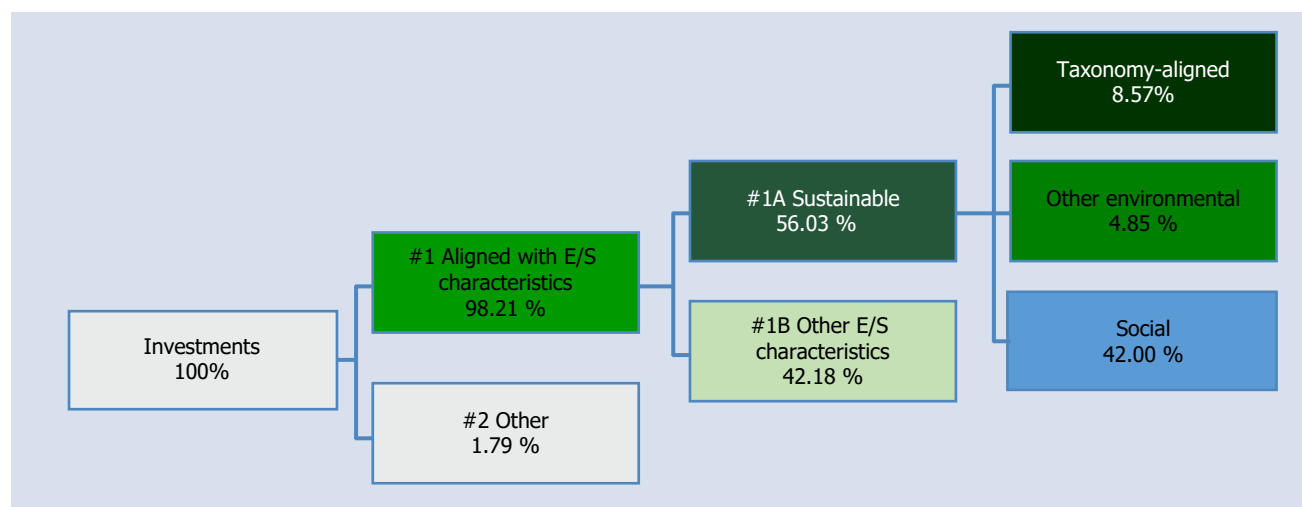

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
B	MINING AND QUARRYING	3.52 %
B09	Mining support service activities	3.52 %
C	MANUFACTURING	35.32 %
C10	Manufacture of food products	4.22 %
C14	Manufacture of wearing apparel	1.57 %
C17	Manufacture of paper and paper products	1.15 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	2.12 %
C22	Manufacture of rubber and plastic products	1.49 %
C23	Manufacture of other non-metallic mineral products	4.00 %
C24	Manufacture of basic metals	3.26 %
C27	Manufacture of electrical equipment	5.56 %
C28	Manufacture of machinery and equipment n.e.c.	10.98 %

C32	Other manufacturing	0.97 %
D	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	1.08 %
D35	ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	1.08 %
F	CONSTRUCTION	0.56 %
F41	Construction of buildings	0.56 %
G	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	11.53 %
G46	Wholesale trade, except of motor vehicles and motorcycles	5.39 %
G47	Retail trade, except of motor vehicles and motorcycles	6.14 %
I	ACCOMMODATION AND FOOD SERVICE ACTIVITIES	3.49 %
I55	Accommodation	3.49 %

J63	Information service activities	5.10 %
K	FINANCIAL AND INSURANCE ACTIVITIES	22.01 %
K64	Financial service activities, except insurance and pension funding	11.09 %
K65	Insurance, reinsurance and pension funding, except compulsory social security	8.78 %
K66	Activities auxiliary to financial services and insurance activities	2.14 %
L	REAL ESTATE ACTIVITIES	4.49 %
L68	REAL ESTATE ACTIVITIES	4.49 %
M	PROFESSIONAL, SCIENTIFIC AND TECHNICAL ACTIVITIES	1.31 %
M71	Architectural and engineering activities; technical testing and analysis	1.31 %
S	OTHER SERVICE ACTIVITIES	2.38 %
S96	Other personal service activities	2.38 %
Other	NOT SECTORIZED	1.79 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

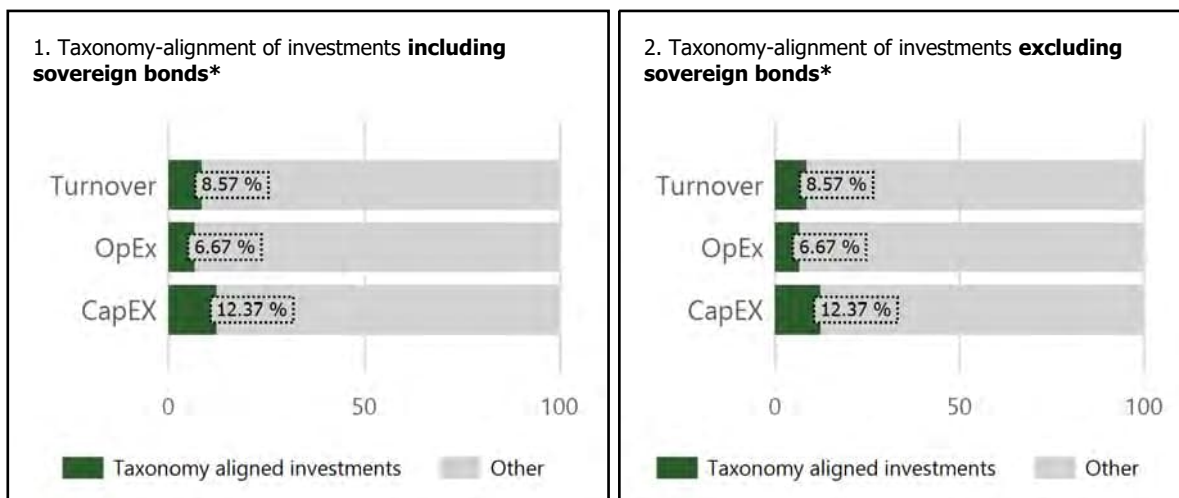

Yes

In fossil gas In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	6.74 %
Climate change adaptation	0.00 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	1.44 %
Enabling activities	3.74 %

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	8.57 %	4.37 %	4.22 %
Capex	12.37 %	6.67 %	0 %
Opex	6.67 %	5.66 %	0 %
Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	8.57 %	4.37 %	4.22 %
Capex	12.37 %	6.67 %	0 %
Opex	6.67 %	5.66 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 4.85 %.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 42 %.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager’s engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI’s strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI’s holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Product name:

Allianz Europe Small and Micro Cap Equity

Legal entity identifier: 52990079B3RQSR4XZV91

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 38.12% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Europe Small and Micro Cap Equity (the "Sub-Fund") promoted a broad range of environmental and social characteristics. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by, excluded direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.

- In a second step, the Investment Manager adhered to a minimum percentage of 20.00% of Sustainable Investments. Sustainable Investments include a broad range of environmental and social topics, for which the Investment Manager used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the EU Taxonomy objectives. The proprietary methodology to assess the environmental and social contribution was described in the section "What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?" and contained an assessment of the positive contribution to environmental and social contributions as well as an assessment to avoid significant harm to any environmental or social objective.

- Further, the Investment Manager committed to invest minimum 60% of Sub-Fund's net asset value into issuers which, as assessed by the Investment Manager, were not considered to significantly harm any environmental or social objective according to the Sustainable Investment methodology. The Investment Manager adhered to a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 10% of their revenue from thermal coal extraction,

- active within the utility sector and generating more than 20% of their revenues from coal,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of assets invested in issuers which have been assessed according to the Sustainable Investments methodology at the end of the financial year was 81.72 %. The calculation of the Sustainable Investments methodology is described below in the sections "What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?" and "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.

- The actual Sustainable Investment share at the end of the financial year was 38.12 %.

- The actual percentage of investments that pass the assessment to significantly harm environmental or social objectives at the end of the financial year was 7.05 %.

- **... and compared to previous periods?**

Indicator	09.2025	09.2024	09.2023
The actual percentage of assets invested in issuers which have been assessed according to the Sustainable Investments methodology at the end of the financial year was	81.72%	85.35%	73.1%
The actual weighted average sustainable investment share of Sub-Fund Assets was	38.12%	53.06%	41.47%
The actual percentage of investments that pass the assessment to not significantly harm environmental or social objectives at the end of the financial year was	7.05%	1.45%	0%
Confirmation that the exclusion criteria have been adhered to throughout the financial year	The exclusion criteria have been adhered to throughout the financial year		

- [What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?](#)

The objectives of the Sustainable Investments that the financial product partially intended to make included a broad range of environmental and social topics. The Investment Manager used, among other references, the UN Sustainable Development Goals (SDGs) and the EU Taxonomy objectives - namely Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to a Circular Economy, Pollution Prevention and Control, and Protection and Restoration of Biodiversity and Ecosystems.

The Investment Manager measured how the Sustainable Investments contributed to these objectives using a proprietary methodology:

Business activities of issuers were broken down into revenue segments based on external data. Where this segmentation lacked granularity, the Investment Manager determined the breakdown. These activities were internally assessed for their positive contribution to environmental or social objectives. The revenue share of each activity that contributed positively was allocated to the Sustainable Investment share, provided the issuer passed the Do No Significant Harm (DNSH) assessment and satisfied Good Governance principles.

Issuers whose business activities amounted to a Sustainable Investment share of at least 20% and who were transitioning or already aligned with a Net Zero pathway had their Sustainable Investment share increased by 20 percentage points. Issuers were considered transitioning to Net Zero if they were achieving, aligned to, or aligning to Net Zero. Those merely committed or not aligned were excluded from this enhancement.

For securities financing specific projects ("Project Bonds") that contributed to environmental or social objectives, the entire investment was considered to contribute to those objectives. However, DNSH and Good Governance checks were also performed at the issuer or project level.

The Sustainable Investment share of each issuer and Project Bond was weighted based on the portfolio's investment percentage in each. These individual weighted shares were aggregated to compute the overall Sustainable Investment share of the Sub-Fund.

[1]<https://sdgs.un.org/goals>

- [How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?](#)

To assess whether Sustainable Investments did not significantly harm any other environmental and/or social objective, the Investment Manager used the indicators regarding principal adverse impacts ("PAI") on sustainability factors.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

All mandatory PAI indicators are taken into account as follows:

- Investments in issuers violating the exclusion criteria for controversial weapons, severely violating principles, and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights or sovereign issuer with an insufficient freedom house index score are excluded and do not pass the DNSH assessment. The exclusion criteria are described in the section "What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?".
- Thresholds are determined for all PAI indicators except for the "share of non-renewable energy consumption and production" which is indirectly reflected in other PAI indicators.

In detail, the Investment Manager has taken the following steps:

- Defined significance thresholds to identify significantly harmful issuers. Issuers are measured against the significance thresholds at least bi-annually. Depending on the respective indicator, the thresholds are determined either relative to the sector, absolute or based on events or situations in which companies allegedly have a negative environmental, social or governance impact (controversies). The Investment Manager can engage with issuers not meeting the significance thresholds in order to allow the issuer to remediate the adverse impact.
- Weighing the PAI indicator according to the level of confidence in the quality of data available which are computed to an overall DNSH score relevant for the issuer. The overall DNSH score is determined based on the threshold for each PAI and the confidence weight. A company is considered to not pass the DNSH assessment if the overall DNSH score is one or more. If the issuer does not meet the overall DNSH score twice subsequently or in case of a failed engagement, it does not pass the DNSH assessment. Investments in securities of issuers which do not pass the DNSH assessment are not counted as Sustainable Investments.
- In certain circumstances where backward-looking or forward-looking information is inconsistent with the DNSH assessment, the Investment Manager may override the DNSH assessment. The override decision is made by an internal decision-making body which is composed of functions including Investments, Compliance and Legal.

There is a lack of data coverage for PAI indicators. Equivalent data points are used to assess PAI indicators when applying the DNSH assessment, when relevant, for the following indicators for corporates: share of non-renewable energy consumption and production, activities negatively affecting biodiversity-sensitive areas, emissions to water, lack of processes and compliance mechanisms to monitor compliance with UNGC principles and OECD Guidelines for Multinational Enterprises; for sovereigns: GHG Intensity and investee countries subject to social violations. In the case of Project Bonds equivalent data at project level might be used to ensure that Sustainable Investments do not significantly harm any other environmental and/or social objective. The Investment Manager will strive to increase data coverage for PAI indicators with low data coverage by engaging with issuers and data providers. The Investment Manager will regularly evaluate whether the availability of data has increased sufficiently to potentially include assessment of such data in the investment process.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager, as described in the section "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund, excluded companies that severely violated one of the following frameworks: the Principles of the UN Global Compact, the OECD Guidelines for Multinational Enterprises, and the UN Guiding Principles for Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria. The "do not significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities. Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager considered PAIs through measures directly impacting the investment strategy such as applying exclusion criteria and indirect measures such as engagement with corporate issuers and joining relevant industry initiatives. Considering PAIs did not mean avoiding PAIs but aiming to mitigate such PAIs. The overall mitigation aim was also dependent on the management of the portfolio according to the general investment strategy.

The data coverage for the data required for the PAI indicators was heterogenous. The Investment Manager strove to increase data coverage for PAI indicators with low data coverage through engagement with data providers and/or issuers. The Investment Manager regularly evaluated whether the availability of data had increased sufficiently to potentially include assessment of such data in the investment process.

The principal adverse impact indicators were also considered through the following indirect measures:

- The Investment Manager actively encouraged and conducted dialogues with investee companies on broader sustainability issues, which included PAI indicators such as Gender Diversity, and also prepared voting decisions in advance of shareholder meetings (regularly for direct investments in shares). In deciding how to exercise voting rights, the Investment Manager also considered broader sustainability issues. Further details on the Investment Manager's approach to the exercise of voting rights and company engagement were set out in the Investment Manager's Stewardship Statement.
- The Investment Manager joined the Net Zero Asset Manager Initiative.[2] This is an international group of asset managers committed to reducing GHG emissions in partnership with institutional investors.

[2]<https://www.netzeroassetmanagers.org/>

The following PAI indicators have been considered by the Investment Manager of the Sub-Fund:

- GHG emissions
- Carbon footprint
- GHG intensity of investee companies
- Exposure to companies active in the fossil fuel sector
- Activities negatively affecting biodiversity-sensitive areas
- Emissions to water
- Hazardous waste and radioactive waste ratio
- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- Board gender diversity
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)
- Investee countries subject to social violations

What were the top investments of this financial product?

During the reference period, the majority of the investments of the Sub-Fund contained equity, debt and/or target funds. A portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such assets are derivatives, cash and deposits. As these assets were not used to attain the environmental or social characteristics promoted by the financial product, they were excluded from the determination of top investments. The main investments are the investments with the largest weight in the financial product. The weight is calculated as an average over the four valuation dates. The valuation dates are the reporting date and the last day of every third month for nine months backwards from the reporting date.

For transparency purposes for the investments falling under the NACE sector "Public administration and defence; compulsory social security", the more detailed (sub-sector level) classification is displayed in order to differentiate between the investments which relate to sub-sectors "Administration of the State and the economic and social policy of the community", "Provision of services to the community as a whole" (which includes, among others, defence activities) and "Compulsory social security activities".

No direct sector allocation is possible for investments in target funds, as a target fund may invest in securities of issuers from different sectors.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/10/2024-30/09/2025

Largest investment	Sector	% Assets	Country
VUSIONGROUP	MANUFACTURING	3.63 %	France
FLATEXDEGIRO AG	FINANCIAL AND INSURANCE ACTIVITIES	3.44 %	Germany
GRANGES AB	MANUFACTURING	2.93 %	Sweden
BIOGAIA AB-B SHS	MANUFACTURING	2.92 %	Sweden
INVISIO AB	MANUFACTURING	2.72 %	Sweden
DYNAVOX GROUP AB	INFORMATION AND COMMUNICATION	2.64 %	Sweden
JENOPTIK AG	MANUFACTURING	2.48 %	Germany
M6-METROPOLE TELEVISION	INFORMATION AND COMMUNICATION	2.43 %	France
SUSS MICROTEC SE	MANUFACTURING	2.38 %	Germany
KARNOV GROUP AB	PROFESSIONAL, SCIENTIFIC AND TECHNICAL ACTIVITIES	2.35 %	Sweden
GLENVEAGH PROPERTIES PLC	CONSTRUCTION	2.28 %	Ireland
DALATA HOTEL GROUP PLC	ACCOMMODATION AND FOOD SERVICE ACTIVITIES	2.21 %	Ireland
VITROLIFE AB	MANUFACTURING	2.09 %	Sweden
SILTRONIC AG	MANUFACTURING	2.02 %	Germany
NEINOR HOMES SA	CONSTRUCTION	2.01 %	Spain

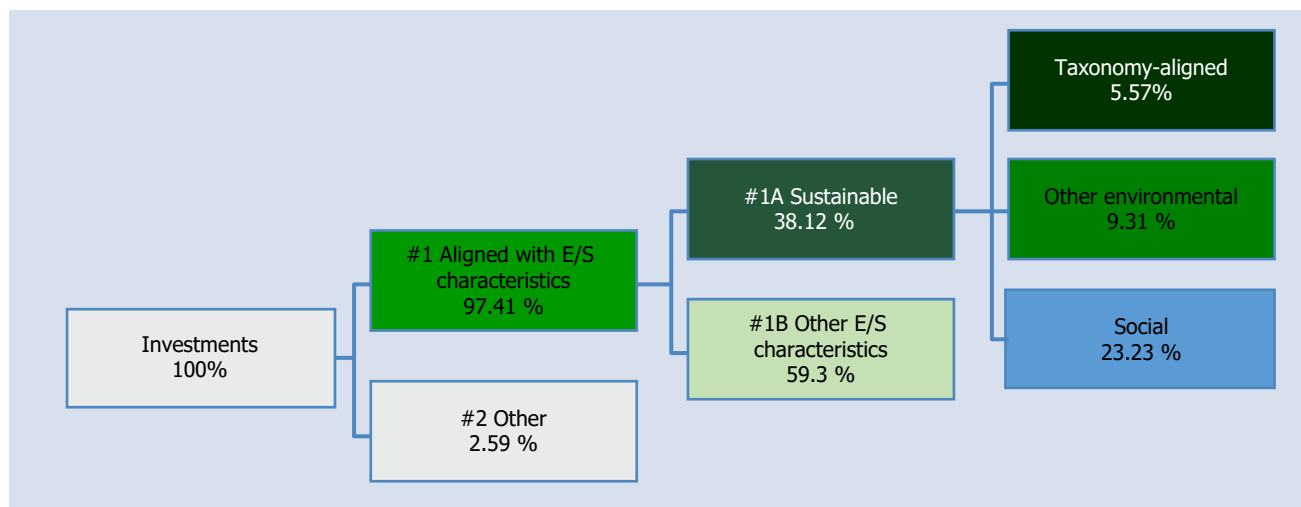

What was the proportion of sustainability-related investments?

Sustainability-related investments refer to all investments that contribute to the achievement of the environmental and/or social characteristics within the scope of the investment strategy. The majority of the Sub-Fund's assets were used to meet the environmental or social characteristics promoted by this Sub-Fund. A low portion of the Sub-Fund contained assets which did not promote environmental or social characteristics. Examples of such instruments are derivatives, cash and deposits, some Target Funds and investment with temporarily divergent or absent environmental, social, or good governance qualifications.

Asset allocation describes the share of investments in specific assets.

- What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product. **#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments. The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- In which economic sectors were the investments made?

The table below shows the shares of the Sub-Fund's investments in various sectors and subsectors at the end of the financial year. The analysis is based on the NACE classification of the economic activities of the company or issuer of the securities in which the financial product is invested. In case of the investments in target funds, a look-through approach is applied so that the sector and sub-sector affiliations of the underlying assets of the target funds are taken into account to ensure transparency on the sector exposure of the financial product.

The reporting of sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council is currently not possible, as the evaluation includes only NACE classification level I and II. The fossil fuels activities mentioned above are considered aggregated with other activities under sub-sectors B5, B6, B9, C28, D35 and G46.

	Sector / Sub-sector	% Assets
C	MANUFACTURING	43.44 %
C16	Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials	1.38 %
C20	Manufacture of chemicals and chemical products	2.75 %
C21	Manufacture of basic pharmaceutical products and pharmaceutical preparations	5.88 %
C22	Manufacture of rubber and plastic products	1.28 %
C24	Manufacture of basic metals	3.12 %
C26	Manufacture of computer, electronic and optical products	20.38 %
C27	Manufacture of electrical equipment	0.49 %
C28	Manufacture of machinery and equipment n.e.c.	6.76 %
C29	Manufacture of motor vehicles, trailers and semi-trailers	1.39 %
F	CONSTRUCTION	7.69 %
F41	Construction of buildings	7.69 %
G	WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	3.75 %
G46	Wholesale trade, except of motor vehicles and motorcycles	1.95 %
G47	Retail trade, except of motor vehicles and motorcycles	1.80 %
H	TRANSPORTATION AND STORAGE	0.59 %
H49	Land transport and transport via pipelines	0.59 %
J	INFORMATION AND COMMUNICATION	20.11 %
J58	Publishing activities	13.70 %
J60	Programming and broadcasting activities	3.32 %
J62	Computer programming, consultancy and related activities	3.09 %
K	FINANCIAL AND INSURANCE ACTIVITIES	7.51 %
K64	Financial service activities, except insurance and pension funding	0.81 %
K66	Activities auxiliary to financial services and insurance activities	6.70 %
L	REAL ESTATE ACTIVITIES	2.88 %
L68	REAL ESTATE ACTIVITIES	2.88 %
M	PROFESSIONAL, SCIENTIFIC AND TECHNICAL ACTIVITIES	6.87 %
M69	Legal and accounting activities	3.10 %
M71	Architectural and engineering activities; technical testing and analysis	1.54 %
M72	Scientific research and development	2.23 %
N	ADMINISTRATIVE AND SUPPORT SERVICE ACTIVITIES	1.96 %
N77	Rental and leasing activities	1.21 %
N78	Employment activities	0.74 %
Other	NOT SECTORIZED	5.21 %

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Taxonomy-aligned investments include debt and/or equity investments in environmentally sustainable economic activities aligned with the EU-Taxonomy. The Taxonomy-aligned data is provided by an external data provider. The Investment Manager has assessed the quality of such data. The data will not be subject to an assurance provided by auditors or a review by third parties. The data will not extend to government bonds. As of today, there is no recognized methodology available to determine the proportion of Taxonomy-aligned activities when investing in government bonds. The share of investments in sovereigns was 0 % (calculated based on look-through approach).

Taxonomy-aligned activities in this precontractual disclosure are based on share of revenues but the periodic reporting contains as well values for CAPEX and OPEX. Taxonomy-aligned data is only in some cases data reported by companies in accordance with the EU Taxonomy. In case data is not reported by companies, the data provider derives Taxonomy-aligned data from other available equivalent public data.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy?

Yes

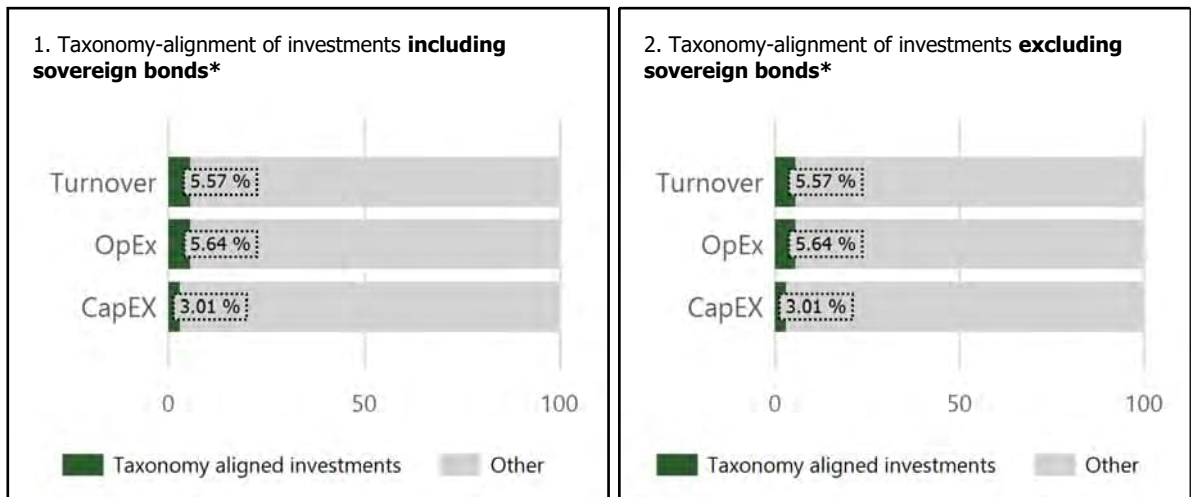

In fossil gas

In nuclear energy

No

The Investment Manager did not pursue any investments in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy. Nevertheless, the Investment Manager may have invested in corporates which are also active in these activities.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Climate change mitigation	4.70 %
Climate change adaptation	0.26 %

- What was the share of investments made in transitional and enabling activities?

Transitional activities	1.45 %
Enabling activities	0.46 %

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. **Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

- How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

Taxonomy-alignment of investments including sovereign bonds	09.2025	09.2024	09.2023
Turnover	5.57 %	4.41 %	2.82 %
Capex	3.01 %	4.53 %	0 %
Opex	5.64 %	4.68 %	0 %

Taxonomy-alignment of investments excluding sovereign bonds	09.2025	09.2024	09.2023
Turnover	5.57 %	4.41 %	2.82 %
Capex	3.01 %	4.53 %	0 %
Opex	5.64 %	4.68 %	0 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 9.31% of Sub-Fund assets.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 23.23% of Sub-Fund assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Investments were included under #2 Other, if they were not used to promote the environmental or social objectives of the sub-fund. Examples of such investments are cash, derivatives and the proportion of some target funds which did qualify as sustainable investments (based on a look-through approach). There were no minimum environmental or social safeguards applied to these investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

To ensure that the Sub-Fund fulfils its environmental and social characteristics, the binding elements were defined as assessment criteria. The adherence to binding elements was measured with the help of sustainability indicators. For each sustainability indicator, a methodology, based on different data sources, has been set up to ensure accurate measurement and reporting of the indicators. To provide for actual underlying data, The assessment of issuers against the exclusion criteria is performed at least half yearly by the Sustainability Team and based on external data sources.

Technical control mechanisms have been introduced for monitoring the adherence to the binding elements in pre- and post-trade compliance systems. These mechanisms served to guarantee constant compliance with the environmental and social characteristics of the Sub-Fund. In case of identified breaches, corresponding measures were performed to address the breaches. Example of such measures are disposal of securities which are not in line with the exclusion criteria or engagement with the issuers (in case of direct investments in companies). These mechanisms are an integral part of the PAI consideration process.

In addition, AllianzGI engages with investee companies. The engagement activities were performed only in relation to direct investments. It is not guaranteed that the engagement conducted includes issuers held by every fund. The Investment Manager's engagement strategy rests on 2 pillars: (1) risk-based approach and (2) thematic approach.

The risk-based approach focuses on the material ESG risks identified. Engagements are closely related to the size of exposure. Significant votes against company management at past general meetings, controversies connected to sustainability or governance and other sustainability issues are in the focus of the engagement with investee companies

The thematic approach focuses on one of the three AllianzGI's strategic sustainability themes- climate change, planetary boundaries, and inclusive capitalism- or to governance themes within specific markets. Thematic engagements were identified based on topics deemed important for portfolio investments and were prioritized based on the size of AllianzGI's holdings and considering the priorities of clients.

How did this financial product perform compared to the reference benchmark?

No, the Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics that the Sub-Fund promotes.

- **How did the reference benchmark differ from a broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the reference benchmark?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

- **How did this financial product perform compared with the broad market index?**

The Investment Manager has not assigned a reference benchmark to determine alignment with the environmental and/or social characteristics.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name:

Allianz Europe Small Cap Equity

Legal entity identifier: 5299004KPSJLVX3ZMU87

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: _%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 47.5% of sustainable investments

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It made **sustainable investments with a social objective**: _%

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Allianz Europe Small Cap Equity (the "Sub-Fund") promoted a broad range of environmental and social characteristics. The Sub-Fund did so by:

- As a first step the Investment Manager promoted environmental and social characteristics, by, excluded direct investments in certain issuers which were involved in controversial environmental or social business activities from the investment universe of the Sub-Fund by applying exclusion criteria. Within this process the Investment Manager excluded investee companies that severely violate good governance practices and principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights.
- In a second step, the Investment Manager adhered to a minimum percentage of 20.00% of Sustainable Investments. Sustainable Investments include a broad range of environmental and social topics, for which the Investment Manager used as reference frameworks, among others, the UN Sustainable Development Goals (SDGs), as well as the EU Taxonomy objectives. The proprietary methodology to assess the environmental and social contribution was described in the section "What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?" and contained an assessment of the positive contribution to environmental and social contributions as well as an assessment to avoid significant harm to any environmental or social objective.
- Further, the Investment Manager committed to invest minimum 60% of Sub-Fund's net asset value into issuers which, as assessed by the Investment Manager, were not considered to significantly harm any environmental or social objective according to the Sustainable Investment methodology. The Investment Manager adhered to a minimum percentage of 0.01% investments that were aligned with the EU Taxonomy.

No reference benchmark was designated for the purpose of attaining the environmental and/or social characteristics promoted by the Sub-Fund.

Details and methods of each step were described within the section "What investment strategy does this financial product follow?" in the pre-contractual document.

Sustainability indicators
measure how the
environmental or social
characteristics promoted
by the financial product
are attained.

- **How did the sustainability indicators perform?**

To measure the attainment of the environmental and/or social characteristics the following sustainability indicators are used and performed as follows:

- The exclusion criteria have been adhered to throughout the Sub-Fund's financial year. The following exclusion criteria for securities issued by companies were applied:

- severely violating principles and guidelines such as the Principles of the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, and the United Nations Guiding Principles for Business and Human Rights,

- developing, producing, using, maintaining, offering for sale, distributing, storing, or transporting controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, biological weapons, depleted uranium, white phosphorus, and nuclear weapons outside of the non-proliferation treaty),

- deriving more than 10% of their revenue from thermal coal extraction,

- active within the utility sector and generating more than 20% of their revenues from coal,

- involved in the production of tobacco, or deriving more than 5% of their revenues from the distribution of tobacco.

Direct investments in securities issued by sovereign issuers qualified with a score as "not free" by the freedom house index are excluded.

Investors are advised that the exclusion criteria may have changed during the reporting period. The applicable exclusion criteria at the time of reporting are documented in the current annual report as well as in the pre-contractual information.

- The actual percentage of assets invested in issuers which have been assessed according to the Sustainable Investments methodology at the end of the financial year was 97.91 %. The calculation of the Sustainable Investments methodology is described below in the sections "What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?" and "What investment strategy does this financial product follow?" in the pre-contractual document of the Sub-Fund.
