JANUARY 2020 FACTSHEET

Unless otherwise stated, Performance, Portfolio Breakdowns and Net Asset information as at: 31-Jan-2020. All other data as at 13-Feb-2020.

For Investors in the UK. Investors should read the Key Investor Information Document and Prospectus prior to investing.

FUND OVERVIEW

The Fund aims to maximise the return on your investment through a combination of capital growth and income on the Fund's assets. The Fund invests globally at least 70% of its total assets in the shares of companies. The Fund will generally aim to invest in securities of companies that are undervalued, where in the Portfolio Manager's opinion, their market price does not reflect their underlying worth.

RATINGS

Key Risks Continued: The fund invests a large portion of assets which are denominated in other currencies; hence changes in the relevant exchange rate will affect the value of the investment. Compared to more established economies, the value of investments in developing Emerging Markets may be subject to greater volatility due to differences in generally accepted accounting principles or from economic or political instability. The fund may invest in smaller company shares which can be more unpredictable and less liquid than those of larger company shares.

GLOSSARY

Market Capitalisation: is the total value of the shares issued by a company which trades on the stock exchange.

Ongoing Charge: is a figure representing all annual charges and other payments taken from the fund.

Price to Book Ratio: represents the ratio of the current closing price of the share to the latest quarter's book value per share.

Price to Earnings (TTM) Ratio: represents the ratio of the market price per share of a company to the company's earnings per share for a twelve-month period (usually the last 12 months or trailing twelve months (TTM)).

Quartile Rank: categorises a fund into four equal bands based on their performance over a specified period within the relevant Morningstar's sector. The top or first quartile contains the top 25% of funds, through to the bottom or 4th quartile which contains the bottom 25% of funds.

SRRI: is a value based on the volatility of the fund, which gives an indication of the overall risk and reward profile of the Fund.

Performance Fee: is charged on any returns that, subject to a High Water Mark, the Fund achieves above it's performance fee benchmark. Please refer to the Prospectus for further information.

Price to Earnings (FY1): A valuation ratio of a company's current share price compared to its per-share earnings in the current forecast year, calculated as current share price divided by current earnings per share.

Sharpe Ratio: A risk-adjusted measure. It is calculated by using standard deviation and excess return to determine reward per unit of risk. The higher the Sharpe Ratio, the better the fund's historical risk-adjusted performance.

Average Market Cap: The average market capitalization of a fund's equity portfolio gives you a measure of the size of the companies in which the fund invests. Market capitalization is calculated by multiplying the number of a company's shares outstanding by its price per share.

Effective Duration: Effective duration is a measure of a fund's interest-rate sensitivity. Put simply, the longer a fund's duration, the more sensitive the fund is to shifts in interest rates. So a fund with a duration of 10 years is twice as volatile as a fund with a five-year duration.

IMPORTANT INFORMATION:

¹The Reference Benchmark is an unmanaged weighted index comprised as follows: 60% of the S&P 500 Index and 40% FTSE World (ex US) Index.

²% of Net Assets represents the Fund's exposure based on the economic value of securities; adjusted for futures, options and swaps (except with respect to fixed income securities), and convertible bonds. On a market value basis the Fund is comprised of 94% equities, 0% fixed income, 6% cash equivalents. The Funds will not use borrowing to purchase additional investments but may be expected, via derivative positions, to obtain market exposure in excess of net asset value. Allocations subject to change. Numbers may not sum to 100% due to rounding. Risk statistics are based on monthly fund returns for the 3-year period. Benchmark risk measures are calculated in relation to the FTSE World Index. Standard Deviation measures the volatility of the fund's returns. Higher deviation represents higher volatility. Sharpe Ratio uses a fund's standard deviation and its excess return (difference between the fund's return and the risk-free return of 90-day Treasury Bills) to determine reward per unit of risk.
