## Fund overview

ISIN	Bloomberg	Reuters
LU2190025218	JPEDPAE LX	LU2190025218.LUF
<b>Investment objective:</b> To provide long term capital growth through exposure to a diversified portfolio of emerging market companies, by direct investments in securities of such companies and through the use of financial derivative instruments.		
<b>Investment approach</b> <ul style="list-style-type: none"><li>• Uses fundamental and systematic research inputs to identify stocks with specific style characteristics, such as value and momentum in price and earnings trends.</li><li>• Combines bottom-up stock selection with top-down views on countries and sectors.</li><li>• Uses an active extension approach, buying securities considered attractive and selling short securities (achieved through derivatives) considered less attractive to improve potential returns without increasing overall net exposure to the market.</li></ul>

Definitions

**NAV** Net Asset Value of a fund's assets less its liabilities per Share.

**Correlation** measures the strength and direction of the relationship between movements in fund and benchmark returns. A correlation of 1.00 indicates that fund and benchmark returns move in lockstep in the same direction.

**Alpha (%)** a measure of excess return generated by a manager compared to the benchmark. An alpha of 1.00 indicates that a fund has outperformed its benchmark by 1%.

**Beta** measures a fund's sensitivity to market movements (as represented by the fund's benchmark). A beta of 1.10 suggests the fund could perform 10% better than the benchmark in up markets and 10% worse in down markets, assuming all other factors remain constant. Usually the higher betas represent riskier investments.

**Annualised volatility (%)** measures the extent to which returns vary up and down over a given period.

**Sharpe ratio** performance of an investment adjusting for the amount of risk taken (compared a risk-free investment). The higher the Sharpe ratio the better the returns compared to the risk taken.

**Tracking error (%)** measures how much a fund's returns deviate from those of the benchmark. The lower the number the closer the fund's historic performance has followed its benchmark.

**Information ratio** measures if a manager is outperforming or underperforming the benchmark and accounts for the risk taken to achieve the returns. A manager who outperforms a benchmark by 2% p.a. will have a higher IR than a manager with the same outperformance but who takes more risk.
