

VIG Central European Equity Fund

EUR-RP series MONTHLY report - 2026 MARCH (made on: 03/31/2026)
EUR

INVESTMENT POLICY OF THE FUND

The aim of the Fund is to invest on the stock market of the Central and Eastern European Region. It is for investors who would like a share in the long-term performance of listed companies in the region. In the development of the portfolio of this Fund, the priority is to optimise the aggregate risk of the securities added to the Fund. In order to reduce risks, the Fund Manager exercises the highest degree of diligence when selecting the securities to be included in the portfolio. It analyses the risk factors of the securities, and supports its decisions with in-depth calculations.

The Fund purchases stocks issued by companies in Central and Eastern European region (primarily Hungary, the Czech Republic, Poland, Austria, Romania, secondarily Slovenia, Croatia, Slovakia), but it may also invest in the stocks of other developing and developed foreign companies as well as other collective investment securities. Due to the strategy of the Fund, it may also invest in assets denominated in foreign currency. The Fund may hedge some or all of its foreign currency risk using forward currency positions against the target currency. The Fund Manager has the discretionary right to reduce the foreign currency risk of the currency positions differing from the Fund's target currency, based on the market processes by concluding hedge transactions. In addition, the use of equity and index futures is permitted in order to effectively build the Fund's portfolio. To ensure liquidity, the Fund wishes to add government securities issued by member states of the EU, OECD, or G20 to its portfolio.

MARKET SUMMARY

The defining event of the month was the outbreak of armed conflict between the U.S. and Iran on February 28, which fundamentally reshaped the global risk landscape. The closure of the Strait of Hormuz—the most important transit route for oil and natural gas in the Middle East—and the mutual strikes against energy infrastructure painted a picture of a stagflationary scenario. The S&P 500 index ended March, down nearly 7%, marking the global stock market's largest monthly decline since 2022. The technology sector led the correction, while energy and defense stocks showed relative strength. The Fed, acting as the central bank, left the benchmark interest rate unchanged; however, the previously priced-in rate cut disappeared, and the 10-year yield rose to near 4.4%. The Euro Stoxx 50, the benchmark for Europe, was also hit by high oil prices, with the index—which tracks the share prices of the largest companies—falling 10%. In line with this, the EU warned that if the price of Brent crude oil, the benchmark for the continent, remains around \$100 per barrel, inflation could rise above 3%, and GDP growth could fall short of the 1.4% forecast by as much as 0.4 percentage points. The European Central Bank has found itself in an extremely difficult position, as the energy price shock is hitting Europe proportionally harder than the U.S., making market pricing regarding interest rate policy divergence unsustainable. Airlines, the auto industry, and the luxury goods sector suffered the most, while energy and defense stocks were positive outliers.

In March, investor sentiment on international capital markets was shaped by the unfolding conflict in Iran and the resulting uncertainty in the energy markets, which triggered significant selling in riskier asset classes. In this tense environment, the Central European region underperformed global benchmarks. Within the region, the Polish and Romanian markets were outperformers, while the Czech and Hungarian stock exchanges posted weaker results. The region's underperformance was largely driven by the dollar's strengthening during the month, fueled by both rising demand for the dollar due to higher oil prices and escalating geopolitical risks. The CETOP index posted a return of -4.71% in euros and -6.94% in dollars over the month. The index's performance was significantly driven by double-digit share price gains at oil companies Orlen and MOL, as well as the strong performance of Banca Transilvania, which operates in the Romanian market. In contrast, the mining company KGHM, which performed exceptionally well last year, plummeted by more than 20% due to the decline in copper and silver prices, while Dino Polska and OTP Bank also suffered significant losses.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Erste Bank Hungary Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	100% CETOP 5/10/40 Index
