

INVESTMENT POLICY OF THE FUND

The fund aims to profit from global megatrends that extend beyond economic cycles. Such trends may include demographic changes (ageing society, developing markets), efficiency gains due to scarce resources (renewable resources, energy efficiency), urbanisation, or even technological innovation. The fund aims to achieve its objectives through equity-type instruments, primarily exchange-traded funds (ETFs), equities and open-ended public investment funds. Megatrends are long-term changes that have a lasting impact on our social and economic environment. The fund aims to share in the profit growth of companies that could be winners in these processes. Megatrends are long-term processes that extend beyond normal economic cycles, are usually global and affect the whole world. Consequently, the fund does not have a geographical specification. As the fund aims to profit from long-term growth and has significant exposure to stock markets, it is recommended for risk-taking investors with a long-term investment horizon. The Fund holds its assets in euro. The Fund invests only in investments where the expense ratio remains below 2.5%, but always aims to keep the average fees charged on the underlying collective investment instruments below 1%. The fund also does not have a geographical specification, and thus no typical currency composition. The target currency of the Fund is therefore the settlement currency of the benchmark index (USD). Due to the strategy of the Fund, it may also invest in assets denominated in foreign currency. The Fund may hedge some or all of its foreign currency risk using forward currency positions against the target currency, i.e. the settlement currency of the benchmark (USD). The Fund Manager has a discretionary right to reduce the foreign currency risk of positions denominated in a currency other than the target currency, depending on market developments, by entering into hedge transactions. In addition, the use of equity and index futures is permitted in order to effectively build the Fund's portfolio.

MARKET SUMMARY

In March, global stock markets were dominated by the escalation of the U.S.-Iran armed conflict that erupted in late February. The near-total closure of the Strait of Hormuz and mutual strikes against energy infrastructure painted a stagflationary scenario: the price of Brent crude oil rose by more than 70% in March, surpassing \$100 per barrel—a level not seen since August 2022. The S&P 500 index fell nearly 5%, marking the global stock market's largest monthly decline since 2022. The Fed kept its benchmark interest rate unchanged in the 3.50– 3.75% range, the likelihood of the next rate cut dropped to virtually zero, and the 10-year yield rose. In Europe, the Euro Stoxx 50 lost about 10% over the month, and the EU warned that if the price of Brent crude remains around \$100, inflation could rise above 3%, and GDP growth could fall short of forecasts by as much as 0.4 percentage points.

The month presented a challenge for the Fund. The technology sector led the global correction, with the Nasdaq entering correction territory, while the Magnificent Seven group fell 16% year-to-date, which also impacted the Fund through its thematic exposures. Airlines and the consumer discretionary sector also came under pressure due to rising energy prices and deteriorating consumer confidence. Among the sectors, only energy closed in positive territory in March, with a nearly 10% rise, reflecting the explosive surge in oil prices. Despite the conflict, defense stocks failed to significantly outperform, with the sector falling in line with the broader market. The renewable energy and electrification sectors were able to partially offset losses stemming from technology exposure, as the strengthening energy security narrative provided structural support for these segments.

In April, attention is likely to focus on developments in the Iran conflict and the trajectory of oil prices; a potential ceasefire could trigger a rapid market turnaround, while further escalation could heighten stagflation risks. In addition, the first-quarter earnings season will begin, which may provide a fresh perspective on the earnings outlook for companies exposed to AI. The Fed's interest rate decision at the end of April could be decisive, particularly in light of how the energy price shock is feeding into inflation data.
