Currency:	PLN
Total Net Asset Value of the whole Fund:	64,178,059,168 HUF
Net Asset Value of PLN series:	97,910,528 PLN
Net Asset Value per unit:	2.491074 PLN

INVESTMENT POLICY OF THE FUND:

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The fund is decidedly high-risk, particularly due to the derivative positions it takes. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds, equities and other securities, indices and currencies - provided it sees the opportunity to make substantial gains. In this respect the fund belongs in the category of opportunistic funds that pursue a multi-strategy investment approach. Within the multi-strategy approach pursued by the fund, 'global macro', 'long-short equity', 'convertible bond arbitrage' and 'managed futures'-type transactions dominate. In terms of asset class, the fund's investments can be divided into three main groups: it takes on extra risk in the bond, currency and equity markets, and in these markets it is prepared to take up both long and short positions within the maximum limits permitted by law, which currently allow double leverage for funds of this type. In its investment decision-making mechanism the fund assesses fundamental, pricing, technical and behavioural/psychological factors. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. To ensure liquidity the fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

MARKET SUMMARY:

After 6 years the old Wall Street axiom, sell in May and go away has worked again. It was in 2012, when the S&P 500 index had such a bad month. Back then it fell 6.3%, last month the index returned -6.6%. But this was still better than the emerging markets performance, which closed down the month by 7.5%. There were multiple factors that contributed to last month's bad performance. First of all, the American-Chinese trade war clouded the investment horizon. At the beginning of the month, the major indices opened at new all-time highs because investors were hopeful, that the trade conflict will be resolved soon. But the American president had other thoughts, and raised the tariffs to 25% on imports from China to the United States. At the end of the month the US president imposed 5% tariffs on Mexican goods too, although he just signed the new NAFTA agreement a few months ago. The macro economic data was mixed in May. So far, it seems that the tariff war does not hurt the US economy. More people are working, the GDP is expanding and the inflation is negligible. However the Chinese macro-economic data suggest the opposite. Their GDP is shrinking, the inflation is growing, and the export numbers fell off dramatically. So far, it looks like the U.S. is winning the trade war but as we know the Chinese are planning for the next 2 years but rather the next 50. We are looking cautiously ahead for the next few months. Certain data suggests that a defensive approach should be appropriate in the near term. The falling yield on the 10 and 30 bonds might suggest a slowing economy, but the 3 month-10 year spread might suggest that even a mild recession is not out of order. Europe looks bleakly too, the German 10 year yield hit a new all-time low, and the Brexit is still hovering on the horizon. The fund closed the month in the positive territory in spite of that there was a selling wave sweeping thru the markets in concern of the American-Chinese trade war. We used the Forint's weakness to reduce our position, and we have only 5% left of it. We believe that the EURHUF cross can go to the bottom of the range where we will increase our short position to 20-25% of the fund. On individual basis we increased our position in the Austrian ATS company, and allocated in Turkish stocks because we believe the Turkish market is way undervalued. Also we dipped our hands in the real estate market. We bought two Hungarian developers, Adventum and Finext. Although we believe that the real estate cycle is in its mature phase, we think that this part of the cycle can last another 4-5 years. We hedged our stock exposure with DAX, S&P 500 and Emerging market futures.

ASSET ALLOCATION OF THE FUND ON 05/31/2019
