

INVESTMENT POLICY OF THE FUND

The Fund is a total return investment fund that aims to create a portfolio consisting of bond-type assets through active portfolio management that achieves annualised capital growth for investors higher than the benchmark over a 3-year time horizon. It intends to achieve this objective primarily through asset allocation in global bond markets.

The Fund invests exclusively in bond-type instruments. The Fund's investment universe focuses on developed market government bonds, developed market corporate bonds, local currency emerging market government bonds and hard currency emerging market government and corporate bonds. The primary source of return for the Fund is asset allocation across bond-type asset classes. The asset allocation is based on an "investment clock" approach that uses economic data analysis to determine the position of major regions within a growth cycle. This is complemented by the forecasting of expected movements in real interest rates and inflation expectations, which are also crucial for the allocation across bond markets. Portfolio managers use all these as the basis for making allocation decisions, overweighting the best performing bond asset class in any current economic cycle based on experience and expectations. In the investment process, portfolio managers optimise the interest rate and credit risk of the overall fund and of the exposures to individual bond markets in order to achieve the investment objective.

MARKET SUMMARY

Markets broadly shifted into a risk-off regime, driven by stagflation concerns, USD strength, and geopolitical tensions. Credit and equities declined, while energy-linked assets significantly outperformed.

Corporate credit indices fell 1– 2% in March, with spreads widening by 45– 88 bps. In the U.S., higher-quality segments outperformed, with BBBs widening less than BBs and Bs, reflecting a continued preference for quality. In EM, Latin America proved relatively resilient, outperforming broader high-yield EM, supported by commodity exposure and lower sensitivity to Middle East risks.

Rate moves remained the primary driver of spread widening in developed markets, while EM high yield was more impacted by rising risk premia. Despite recent repricing, LATAM and HY EM continue to offer a yield pick-up over BBBs, with all-in yields now at 7.7% and 7.1%, respectively. At current levels, HY EM retains a relative return advantage in a rate-cut scenario.

Commodities diverged sharply. Energy prices surged, with crude and gasoline posting strong gains across regions, while natural gas performance remained mixed. In contrast, precious and base metals declined amid dominant inflation concerns, although industrial metals showed selective strength.

Equities weakened, with the S&P 500 down 5.0% month-on-month. Valuations compressed modestly but remain elevated in parts of the market, particularly large-cap growth. The equity risk premium remains subdued, and equities continue to offer limited yield compensation relative to investment-grade credit.

We remain focused on valuation discipline and relative value opportunities across regions and asset classes.

Over the past month, we made several measured adjustments to the portfolio's positioning. We significantly decreased exposure to GCC countries along with those that would be affected by the war in Iran. At the broader asset-class level, we switched to a slight-underweight view on emerging-market external debt. Valuations look relatively cheaper, particularly after the strong underperformance delivered last month, which leaves some room for further upside in the near term.
