Net Asset Value of PLN series:	6,911,988 PLN
Net Asset Value per unit:	1.166741 PLN

INVESTMENT POLICY OF THE FUND:

The fund's aim is to assemble an investment portfolio for its investors that is comprised of both Hungarian and international money and capital-market instruments, which the fund can optimise through ongoing dynamic asset allocation in order to attain the highest possible yield. The fund is a 'total-return fund', which means that instead of concentrating on just one subsector of the money or capital market, at any given moment it focuses its investments on the area that holds the promise of the highest possible return. Accordingly, the fund may hold government securities and discount treasury bills issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary, as well as bonds issued by the National Bank of Hungary, and also bank and corporate bonds that are low risk but are nevertheless likely to earn a higher return than government securities. Besides these the fund's portfolio may also contain shares listed on the domestic stock exchange and the bourses of OECD countries, as well as the government securities, bank and corporate bonds of OECD countries. The fund does not follow a fixed benchmark, and does not adhere to a permanent ratio of shares to bonds, but aims to constantly change this ratio within a broad range; indeed, it is also prepared to take on currency risk (just as international bond/equity funds tend to) through the purchase of international government securities and equities. At the same time, the fund maintains the option to hedge currency risks.

RISK INDICATORS FOR THE LAST 12 MONTHS:

Annualized standard deviation of the fund's weekly yields:	1.93 %
Annualized standard deviation of the benchmark's weekly yields:	0.20 %
WAM (Weighted Average Maturity):	1.87 years
WAL (Weighted Average Life):	2.96 years

MARKET SUMMARY:

Market remains in optimistic mood after the dovish shift from central banks (Fed balance sheet reduction will also be stopped later this year) but valuations appear less appealing. Equity markets can be particularly vulnerable as earnings decrease or in case of upside macro surprises, higher rates can hurt. Risk factors remain on the horizon as Brexit looms while market looks a bit too optimistic about trade negotiations. Chinese credit expansion jumped on further stimulus, but further rally is less probable until hard data improved as well. We closed most of our unhedged Romanian bond exposure with a profit, after the market rallied on the news of the government's willingness to change the bank tax regulation. We increased our high-yield EM sovereign exposure as we expect the Fed pause to last a couple of months which will benefit carry trades. We decreased the equity weight of the portfolio by closing our S&P long an started to build a short position as the index lost momentum at important levels.

ASSET ALLOCATION OF THE FUND ON 02/28/2019
