Lower risk/ potential reward Not risk-free — Higher risk/ potential reward

Fund overview

ISIN	Bloomberg	Reuters
LU0117884675	FLEUTCC LX	LU0117884675.LUF

Investment objective: To provide long-term capital growth by investing primarily in technologies (including but not limited to technology, media and telecommunication) related companies in Europe.

Investment approach

- Uses the Behavioural Finance process that is based on investments in stocks with specific style characteristics, such as value, quality and momentum.
- Applies a disciplined, bottom-up investment approach to stock selection.
- Uses a best ideas approach to finding the most attractive investment ideas with minimal constraints.

PERFORMANCE DISCLOSURES

Past performance is not a guide to current and future performance. The value of your investments and any income from them may fall as well as rise and you may not get back the full amount you invested.

Source: J.P. Morgan Asset Management. Share class performance is shown based on the NAV (net asset value) of the share class with income (gross) reinvested including actual ongoing charges excluding any entry and exit fees. The return of your investment may change as a result of currency fluctuations if your investment is made in a currency other than that used in the past performance calculation.
Indices do not include fees or operating expenses and you cannot invest in them.
The benchmark is for comparative purposes only unless specifically referenced in the Sub-Funds' Investment Objective and Policy.

See the material risks, general disclosures and definitions on pages 2 & 3.

DEFINITIONS

Correlation measures the relationship between the movement of the fund and its benchmark. A correlation of 1.00 indicates that the fund perfectly matched its benchmark.
Alpha (%) a measure of excess return generated by a manager compared to the benchmark. An alpha of 1.00 indicates that a fund has outperformed its benchmark by 1%.
Beta a measure of a fund's sensitivity to market movements (as represented by the fund's benchmark). A beta of 1.10 suggests the fund could perform 10% better than the benchmark in up markets and 10% worse in down markets, assuming all other factors remain constant.
Annualised volatility (%) an absolute measure of volatility and measures the extent to which returns vary up and down over a given period. High volatility means that the returns have been more variable over time. The measure is expressed as an annualised value.
Sharpe ratio measures the performance of an investment adjusting for the amount of risk taken (compared a risk-free investment). The higher the Sharpe ratio the better the returns compared to the risk taken.
Tracking error (%) measures how much a fund's returns deviate from those of the benchmark. The lower the number the closer the fund's historic performance has followed its benchmark.
Information ratio (IR) measures if a manager is outperforming or underperforming the benchmark and accounts for the risk taken to achieve the returns. A manager who outperforms a benchmark by 2% p.a. will have a higher IR than a manager with the same outperformance but who takes more risk.
