

# VIG BondMaxx Total Return Bond Investment Fund

PI series PLN MONTHLY report - 2026 APRIL (made on: 04/30/2026)

## INVESTMENT POLICY OF THE FUND

The Fund is a total return investment fund that aims to create a portfolio consisting of bond-type assets through active portfolio management that achieves annualised capital growth for investors higher than the benchmark over a 3-year time horizon. It intends to achieve this objective primarily through asset allocation in global bond markets.

The Fund invests exclusively in bond-type instruments. The Fund's investment universe focuses on developed market government bonds, developed market corporate bonds, local currency emerging market government bonds and hard currency emerging market government and corporate bonds. The primary source of return for the Fund is asset allocation across bond-type asset classes. The asset allocation is based on an "investment clock" approach that uses economic data analysis to determine the position of major regions within a growth cycle. This is complemented by the forecasting of expected movements in real interest rates and inflation expectations, which are also crucial for the allocation across bond markets. Portfolio managers use all these as the basis for making allocation decisions, overweighting the best performing bond asset class in any current economic cycle based on experience and expectations. In the investment process, portfolio managers optimise the interest rate and credit risk of the overall fund and of the exposures to individual bond markets in order to achieve the investment objective.

## MARKET SUMMARY

The current market is drowning in noise, making it hard to spot the real drivers for markets (EM). While ceasefire talks grab the headlines, the only metric that actually matters is whether the Strait of Hormuz returns to full, reliable operation. Until that transit point is secure, we aren't just looking at expensive oil – we're facing a systemic supply shock that fuels volatility and uncertainty across the board. This is a massive reversal from the "Goldilocks" environment we saw at the start of 2026. Back then, growth was up, inflation was cooling, and liquidity was steady. That stability evaporated in March when Middle East tensions spiked. Crucially, this isn't a simple energy crisis. The Hormuz bottleneck has choked off a vast range of strategic commodities, turning a localized disruption into a global supply chain nightmare. Even if the news looks optimistic, the physical reality of impaired trade is what will keep inflation high and growth under pressure. Investors seem to be betting on a quick "return to normal," but supply-driven shocks are notoriously sticky. We are already seeing inflation manifest in the data, and the real danger is that these costs will bake themselves into the broader economy through "second-round effects." While existing momentum and policy cushions are currently propping up growth, that support is fragile. If liquidity dries up and confidence fails, the economic hit will be much harder than markets are currently pricing in – especially as EM trade balances take a hit from surging import costs. After sharply cutting our exposure to the GCC and regions vulnerable to the conflict in Iran back in March, we have begun a disciplined process of rebuilding those positions. At the asset-class level, we have moved to a neutral stance on emerging-market external debt. Our move to neutral reflects the fact that valuations have become stretched again; with assets looking relatively expensive, we see limited potential for significant gains in the short term.

## GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Raiffeisen Bank Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	100% WIBOR o/n + 0.5%
