

INVESTMENT POLICY OF THE FUND

The objective of the investment fund is to make the Polish bond market accessible to the investors, and to function as a relatively stable, medium-risk investment form bringing steady real yields to our Clients on middle term already, without having to tie down their money for a fixed period of time. The Fund mainly invests in Polish government securities issued in zloty, however, the portfolio manager has some room to complement the portfolio with other bond-type investments. Our goal is to achieve the highest yield while taking the lowest risk. To make investment decisions we use the tools of both fundamental and technical analysis, and we take into consideration the investor sentiment on the markets at all times. The portfolio manager seeks out potential investment opportunities based on the macro-economical expectations, the expected yield curve, the return expected on the curve and the market volatility, and selects investments that are considered to be safe and bring relatively high yields in exchange for the risks taken. The Fund strives for complete exchange risk coverage of foreign currency exposure for the target currency.

MARKET SUMMARY

With the yield curve rising, the Polish bond market had a weak performance in August. Yields were up 71 basis points at three-year maturity, 83 basis points at five-year maturity and 76 basis points at ten-year maturity. The bond market weakened mainly due to a renewed rise in inflation and corrected the excessive fall in yields in previous month. Preliminary data showed that year-on-year inflation in August resumed its upward trend, rising to 16.1% from 15.6% in the previous month, thus finishing above market expectations. Inflation could be further fueled by rising energy prices, raising the likelihood of the Bank of Poland raising interest rates for the 11th consecutive time. The second quarter GDP figure came in worse than expected, with the Polish economy expanding by 5.5% year-on-year, but slowing by 2.1% from the previous quarter. Economic performance will therefore play a key role in any decision to raise interest rates. Given the rise in energy prices, there is no intention to end interest rate hikes completely, but the slowdown in the economy may also reduce the pace/rate of interest rate hikes in the future. The end of the rate hike cycle may be close, except for the case, in which European energy crises leads to a new significant sell-off in connection with regional assets. The Purchasing Managers' Index continued to fall, with the manufacturing index falling to 40.9 from 42.1 the previous month. This is the fourth consecutive month of decline in the index. Output and new orders fell as high inflation and an uncertain economic environment weighed on demand. Industrial production grew by 7.6% in July, below market expectations of 7.8%. As for public finances, the state generated a surplus of PLN 6 926.4 million in July, bringing the 12-month rolling budget deficit to 0.95% of GDP.
